1. Principles of Dye Laser Operation. By FRITZ P. SCHÄFER (with 53 Figures)

Historical	1
Organization of the Book	5
1.1. General Properties of Organic Compounds	6
1.2. Light Absorption by Organic Dyes	9
1.3. Deactivation Pathways for Excited Molecules	28
1.4. Laser-Pumped Dye Lasers	32
1.4.1. Oscillation Condition	32
1.4.2. Practical Pumping Arrangements	37
1.4.3. Time Behavior and Spectra	44
1.5. Flashlamp-Pumped Dye Lasers	54
1.5.1. Triplet Influence	54
1.5.2. Practical Pumping Arrangements	60
1.5.3. Time Behavior and Spectra	64
1.6. Wavelength-Selective Resonators for Dye Lasers	66
1.7. Dye-Laser Amplifiers	79
1.8. Outlook	83

2. Continuous-Wave Dye Lasers. By B. B. SNAVELY (with 18 Figures)

2.1. Gain Analysis of the cw Dye-Laser	91
2.1.1. Analysis at Laser Threshold	91
2.1.2. Gain Analysis above Laser Threshold	98
2.2. Tuning of the cw Dye Laser	103
2.3. Performance of Experimental Systems	114
2.4. Conclusion	119

3. Mode-Locking of Dye Lasers. By C. V. SHANK and E. P. IPPEN (with 11 Figures)

3.1. General Background	121
3.2. Pulsed Dye Lasers	128
3.3. Continuous Dye Lasers	135
3.4. Discussion of Short Pulse Formation	141

4. Structure and Properties of Laser Dyes. By K. H. DREXHAGE
(with 6 Figures)

4.1. Physical Properties of Laser Dyes	144
4.2. Internal Conversion $S_1 \rightarrow S_0$	147
4.2.1. Structural Mobility	147
4.2.2. Hydrogen Vibrations	149
4.2.3. Other Intramolecular Quenching Processes	150
4.2.4. Determination of Fluorescence Yields	151
4.3. Intersystem Crossing $S_1 \rightarrow T_1$	152
4.3.1. Dependence on π -Electron Distribution	152
4.3.2. Heavy-Atom Substituents	154
4.3.3. Determination of Triplet Yields	155
4.4. Light Absorption in the States S_1 and T_1	156
4.5. Environmental Effects	157
4.5.1. Fluorescence Quenching by Charge Transfer Interactions	157
4.5.2. Quenching by Energy Transfer	158
4.5.3. External Heavy-Atom Effect	158
4.5.4. Aggregation of Dye Molecules	158
4.5.5. Excited State Reactions	160
4.6. Coumarin Derivatives	161
4.6.1. Absorption and Fluorescence	161
4.6.2. Acid-Base Equilibria	164
4.7. Xanthene Dyes	167
4.7.1. Absorption Spectra	167
4.7.2. Fluorescence Properties	171
4.8. Newer Classes of Efficient Laser Dyes	172
4.8.1. Oxazine Dyes	172
4.8.2. Carbon-Bridged Dyes	175
4.8.3. Naphthofluorescein and Related Dyes	176
4.9. Other Efficient Laser Dyes	177
4.10. Purity and Chemical Identity of Dyes	177
4.11. Concluding Remarks	178

5. Applications of Dye Lasers. By THEODOR W. HÄNSCH
(with 26 Figures)

Properties of Dye Lasers	194
Laser Applications	196
5.1. Light Absorption and Scattering	197
5.1.1. Absorption Spectroscopy	198

Contents	IX
5.1.2. Selective Dye-Laser Quenching	199
5.1.3. Raman Scattering	201
5.1.4. Resonance Fluorescence	203
5.1.5. Trace Analysis, Pollution Detection	204
5.1.6. LIDAR, Resonant Atmospheric Scattering	205
5.1.7. Measurements of Lifetimes and Relaxation Rates	207
5.1.8. Resonant Radiation Pressure, Atomic Beam Deflection	208
5.2. Selective Excitations	209
5.2.1. Optical Pumping	209
5.2.2. Excited-State Spectroscopy	210
5.2.3. Photomagnetism	211
5.2.4. Pumping of Laser Transitions	211
5.2.5. Photoionization	213
5.2.6. Photodetachment	215
5.3. Nonlinear Spectroscopy	217
5.3.1. Saturation Spectroscopy	217
5.3.2. Coherent Transient Effects	220
5.3.3. Nonlinear Susceptibilities	222
5.3.4. Stimulated Light Scattering	224
5.4. Other Spectroscopic Applications	225
5.4.1. Level-Crossing Spectroscopy	226
5.4.2. Quantum-Beat Spectroscopy	226
5.4.3. Heterodyne Spectroscopy	228
5.5. Generation of Tunable UV and IR by Nonlinear Frequency Mixing	228
5.5.1. Harmonic and Sum Frequency Generation	229
5.5.2. Difference Frequency Generation	233
5.5.3. Pumping of Optical Parametric Oscillators	235
5.6. Photochemistry, Isotope Separation	236
5.6.1. Fast Photochemical Reactions	237
5.6.2. Two-Step Photoionization	238
5.6.3. Two-Step Photodissociation	238
5.6.4. Photopredissociation	239
5.7. Dye-Laser Applications in Biology	239
5.7.1. Photolysis of Biological Molecules: Reaction Kinetics	240
5.8. Applications in Medicine	241
5.9. Holography	242
5.9.1. Holographic Contour Mapping	243

5.10. Communications, Integrated Optics	246
5.10.1. Active Waveguides: Thin-Film Dye Lasers	247
5.10.2. Dye Lasers with Distributed Feedback	249
5.11. Light Amplification	252
5.11.1. Dye-Laser Oscillator-Amplifier Systems	254
5.11.2. Intensity Stabilization by Saturated Amplification	255
5.11.3. Dye-Laser Amplifiers with Feedback	256
5.11.4. Image Amplification	258
