1.	Introduction. By YR. Shen (With 2 Figures)
	1.1 Historical Remarks
	1.3 Infrared Parametric Oscillators
	Scattering
	1.6 Summary
	References
	References
2.	Optical Mixing of CO ₂ Lasers in the Far-Infrared.
	By R.L. Aggarwal and B.Lax (With 36 Figures)
	2.1 Historical Background
	2.2 Nonlinear Difference-Frequency Mixing
	2.2.1 Theoretical Background
	2.2.2 Phase-Matching Techniques
	2.3 Choice of Nonlinear Crystal
	2.4 Noncollinear Mixing Geometries
	2.4.1 Simple Noncollinear Geometry
	2.4.2 Folded Noncollinear Geometry
	2.5 Experimental Systems Using CO ₂ Lasers
	2.5.1 Noncollinear Phase-Matched FIR Generation in GaAs 59
	2.5.2 Collinear Phase-Matched Generation in GaAs 60
	2.5.3 FIR Generation in Other Systems
	2.6 Applications
	2.6.1 Far-Infrared Molecular and Solid State Studies
	2.6.2 Plasma Studies with FIR Radiation
	2.7 Future Outlook
	References
3.	Parametric Oscillation and Mixing. By R.L. Byer and R.L. Herbst
٠.	(With 21 Figures)
	3.1 Description

	3.2	Nonlinear Interactions	86
		3.2.1 Second-Harmonic Generation	
		Phase Matching and Effective Nonlinear Coefficient	87
		Focusing	90
		3.2.2 Three-Frequency Interactions	94
		Sum Generation (Up-Conversion)	94
		Difference Frequency Generation (Mixing)	95
		Parametric Generation	96
	3.3	Infrared Generation by Mixing	98
		3.3.1 Dye Laser Sources	99
		3.3.2 Parametric Oscillator Sources	104
		3.3.3 Infrared Laser Sources	106
	3.4	Infrared Generation by Raman Mixing	108
		3.4.1 Stimulated Raman Scattering	
		3.4.2 Coherent Raman Mixing	113
	3.5	Infrared Parametric Oscillators	116
		3.5.1 Introduction	116
		3.5.2 Threshold and Rise Time	117
		3.5.3 Conversion Efficiency	121
		3.5.3 Conversion Efficiency	125
	3.6	Conclusion	132
		ferences	133
