

Contents

1. The Laser – An Unprecedented Light Source	1
1.1 The Properties of Laser Light	1
1.1.1 Directivity	1
1.1.2 Monochromaticity	2
1.1.3 Energy Density and Brightness	3
1.1.4 Ultrashort Pulses	4
1.2 Solid-State Lasers	5
1.3 Gas Lasers	7
1.3.1 Atomic Gas Lasers	7
1.3.2 Molecular Lasers	10
1.4 Dye Lasers	13
1.5 Semiconductor Lasers	14
1.6 Other Lasers and Laser Physics	18
Problems	19
2. The Coherence of Light	21
2.1 Young’s Experiment	21
2.2 The Michelson Interferometer	23
2.3 Temporal Coherence and Spatial Coherence	25
2.4 Complex Representation of Light Field	28
2.5 Coherence Function	30
Problems	33
3. Electromagnetic Theory of Light	35
3.1 Maxwell’s Equations	35
3.2 Reflection and Refraction of Light	39
3.3 Total Reflection	42
3.4 Fabry-Perot Resonator	47
3.5 Fabry-Perot Interferometer	49
3.6 Planar Waveguide	53
3.7 Gaussian Beam	59
Problems	64
4. Emission and Absorption of Light	66
4.1 Mode Density of Electromagnetic Waves	66
4.2 Planck’s Law of Thermal Radiation	69
4.3 Spontaneous Emission and Stimulated Emission	72

4.4 Dipole Radiation and Probability of Spontaneous Emission . . .	75
4.5 Absorption of Light	79
4.6 Complex Susceptibility and Refractive Index	81
Problems	84
5. Principle of the Laser	87
5.1 Population Inversion	87
5.2 Population Inversion in a Three-Level Laser	89
5.3 Population Inversion in a Four-Level Laser	92
5.4 Laser Amplification	94
5.5 Conditions for Laser Oscillation	95
5.6 Frequency of Laser Oscillation	100
Problems	103
6. Output Characteristics of the Laser	106
6.1 Rate Equations of the Laser	106
6.2 Steady-State Output	108
6.3 Oscillation Build-Up	111
6.4 Relaxation Oscillation	113
6.5 Q-Switching	116
Problems	121
7. Coherent Interaction	123
7.1 Interaction Between a Two-Level Atom and a Coherent Field . . .	123
7.2 Induced Dipole Moment and Induced Emission Coefficient . . .	127
7.3 Density Matrix	129
7.4 Equations of Motion of the Density Matrix	132
7.5 Optical Bloch Equations	136
7.5.1 Transformation to an Abstract Space	136
7.5.2 Representation in a Rotating Frame of Reference	138
7.5.3 Terms Representing Longitudinal Relaxation and Transverse Relaxation	140
Problems	141
8. Nonlinear Coherent Effects	143
8.1 Saturation Effect	143
8.2 Change in the Atomic Populations Due to Saturated Absorption	147
8.3 Nonlinear Complex Susceptibility	150
8.4 Inhomogeneous Broadening	152
8.4.1 Doppler Broadening	152
8.4.2 Nonlinear Susceptibility with Doppler Broadening	154
8.5 Hole-Burning Effect	157
8.6 Coherent Transient Phenomena	160
8.6.1 Optical Nutation	164

8.6.2 Free Induction Decay	165
8.6.3 Photon Echo	166
8.6.4 Self-Induced Transparency	168
Problems	171
9. Theory of Laser Oscillation	173
9.1 Fundamental Equations of the Semiclassical Theory	173
9.2 Single-Mode Oscillation	177
9.2.1 Steady-State Oscillation	178
9.2.2 van der Pol Equation	180
9.3 Multimode Oscillation	182
9.3.1 Competition Between Two Modes of Oscillation	182
9.3.2 Existence of Combination Frequencies	186
9.4 Mode Locking	188
9.5 Theory of the Gas Laser	191
9.5.1 Density Matrix of a Gas of Molecules in a Standing- Wave Field	192
9.5.2 Approximate Solutions by Iteration	194
9.5.3 Output Characteristics in the Third-Order Approximation (Lamb Dip)	197
9.6 Fully Quantum-Mechanical Theory of the Laser	199
Problems	201
References	205
Subject Index	207
