Contents

Preface ix

1 Some introductory matters 1

1-1 Introduction to the Maser Idea *1*
1-2 Paramagnetic Resonance and the Solid-state Maser *8*
1-3 Magnetic Units, Quantities, and Notation *25*
1-4 Magnetic Power Dissipation *30*

2 The internal structure and energy levels of atoms 34

2-1 The Quantum States of the Hydrogen Atom *35*
2-2 The Physical Meaning of the Eigenstates *46*
2-3 An Alternative Set of Eigenstates: the Quantum Number j *49*
2-4 More Complex Atoms: the Central-field Approximation *54*
2-5 The Electronic Configuration of an Atom *57*
2-6 Shell Structure and the Periodic Table *58*
2-7 Transition Groups *60*
2-8 The Energy Eigenstates of a Complete Atom: Russell-Saunders Coupling *63*
2-9 Hund's Rules, and an Example of Atomic Eigenstates *69*

3 The magnetic properties of atoms 74

3-1 The Magnetic Moments of Atoms and Electrons *74*
3-2 The Energy Levels of an Atom in a Magnetic Field: Zeeman Splitting *78*
3-3 Stark Effects, Particularly the Quadrupole Interaction *84*
3-4 Nuclear Properties and Hyperfine Structure *89*
3-5 D-C Paramagnetic Susceptibilities *97*

4 The energy levels of paramagnetic maser materials 105

4-1 The Zeeman Energy Levels of Atoms in Crystals *106*
4-2 Crystal-field Effects: Weak, Moderate, and Strong *118*
4-3 Crystallography and Symmetry Properties *132*

4-4 Quantum Description of the Zeeman Levels: the Spin Hamiltonian *140*
4-5 Other Paramagnetic Substances *145*

5 Paramagnetic resonance: the dynamics of spin systems 153

5-1 Populations, Spin Temperatures, and Spin-lattice Relaxation *153*
5-2 Stimulated Transitions *158*
5-3 Power Absorption and Saturation *167*
5-4 Rate Equations for Multilevel Systems *171*
5-5 The Stimulated Transition Probability *177*
5-6 An Alternative Approach—the Bloch Equations *186*
5-7 Spontaneous Emission *208*
5-8 Magnetic Resonance Linewidths and Line Shapes *215*
5-9 Spin-lattice Relaxation *224*
5-10 Cross-relaxation and Spin Thermodynamics *233*

6 The three-level solid-state maser 244

6-1 The Three-level Maser Scheme *245*
6-2 Negative Q's and Negative-resistance Amplifiers *251*
6-3 More Exact Analysis of the Cavity Maser *263*
6-4 Broadbanding Techniques and Nonreciprocal Cavity Masers *269*
6-5 Maser Cavity Designs *283*
6-6 Inversion Ratio Improvement and Harmonic Pumping Schemes *292*
6-7 Cavity Maser Saturation Behavior *299*

7 Traveling-wave masers 307

7-1 Analysis of Traveling-wave Amplification *308*
7-2 Traveling-wave-maser Characteristics *315*
7-3 Basic Properties of Slow-wave Circuits *331*
7-4 Transverse-tape Circuits for Traveling-wave Masers *341*

8 Noise—in masers and in general 364

8-1 The Wave Approach to Thermal Noise in Electrical Circuits *365*
8-2 Noise Waves in Lossy Transmission Lines *373*
8-3 A Useful Noise Theorem *376*
8-4 Amplifier Noise Performance and Noise Temperature *383*
8-5 Thermal Noise Generation in Maser Spin Systems *388*
8-6 The Theoretical Noise Figures of Maser Amplifiers *392*
8-7 Practical Problems and Experimental Results *402*
8-8 Photon Description of Maser Noise *412*
8-9 Quantum Noise Effects on Amplifiers and Signals *423*

9 Practical aspects of microwave masers 438

9-1 Microwave Maser Experimental Results *438*
9-2 Systems Applications of Microwave Masers *446*
9-3 Experimental Methods and Auxiliary Apparatus *466*
9-4 Maser Materials *483*
9-5 High-frequency Pulsed Masers *501*
9-6 Nuclear Magnetic Resonance Masers *505*

appendix Ruby energy levels and transition-probability matrix elements 517
