Contents

Chapter 1
Introduction 1

§1.1 Principle of Holography. Interference of Light 3
§1.2 Three-Dimensional Nature of an Image. Parallax 11
§1.3 Plane Hologram 13
§1.4 Diffraction of Light in a Plane Hologram 16
§1.5 Coherence of Light 20
§1.6 Light Sources for Holography 26
§1.7 History of Holography 30

Chapter 2
Optical Signal and Its Transformations 43

§2.1 Complex Signal in Optics 43
§2.2 Fourier Transformation 48
§2.3 Properties of Fourier Transformation 49
§2.4 Typical Fourier Transformations and Standard Notation for Commonly Occurring Functions 57
§2.5 Optical Systems Performing Fourier Transformation 65
§2.6 Convolution and Its Properties 68
§2.7 Correlation and Its Properties 72
§2.8 Convolution and Correlation in a Plane 73
§2.9 Optical System for Convolution and Cross-Correlation Operations 74
§2.10 Scalar Products of Functions 78

§ 2.11 Generalized Functions or Distributions 81
§ 2.12 Examples of Generalized Functions 84
§ 2.13 Fourier Transformation of Generalized Functions 91
§ 2.14 Convolution of Generalized Functions 100
§ 2.15 Fourier Transformation and Convolution of Functions in Multidimensional Spaces 107
§ 2.16 Delta Functions in a Plane 111
§ 2.17 Fourier Transformation of Radial Functions Defined in a Plane 115
§ 2.18 Hankel Transformation 119
§ 2.19 Truncated Fourier Transformation 121
§ 2.20 Hilbert Transformation 128
§ 2.21 Linear Filter 131
§ 2.22 Linear Two-Dimensional Filter 137
§ 2.23 Dispersion Relationships and Causality Principle 143
§ 2.24 Relationship Between Fourier, Hilbert, and Hankel Transformations 148
§ 2.25 Modulation of a Signal 154
§ 2.26 Fresnel Transformation 167
§ 2.27 Relationship Between Fresnel and Fourier Transformations 172
§ 2.28 Fresnel Sandwich 175
§ 2.29 Bickel–Bowman System 177
§ 2.30 Auxiliary Parameter in Fresnel Transformation. 182
§ 2.31 Dirac and Sampling Transformations 183
§ 2.32 Comparison of Integral Transformations Used in Optics 184

Chapter 3
Random Signal 193

§ 3.1 Random Function and Random Signal 193
§ 3.2 Stationary Random Signal 196
§ 3.3 Correlation Functions 198
§ 3.4 Fourier Transformation of Cross-Correlation Functions 206
§ 3.5 Average Power 207
§ 3.6 Energy Spectrum and Its Physical Meaning 216

§3.7 Random Noise and Interference 219
§3.8 Correlative Methods for Suppression of Noise and Interference 221
§3.9 Detection of a Signal of Known Waveform 223
§3.10 Indeterminacy Function 226
§3.11 Reconstruction of a Function From Its Autocorrelation 233

Chapter 4
Coherence of Light 239

§4.1 Mutual Coherence Function 239
§4.2 Properties of an Analytic Signal and of Mutual Coherence Function 247
§4.3 Emission of Light by Atoms 249
§4.4 Temporal and Spatial Coherence 256
§4.5 Temporal Coherence 258
§4.6 Interference of Waves of Different Frequencies 261
§4.7 Generalization of Mutual Coherence Function to Interference of Light of Different Frequencies 270
§4.8 Transverse and Longitudinal Spatial Coherence 274
§4.9 Incoherent Extended Source Generating Spatially Coherent Light 282
§4.10 Relationship Between Coherence and Diffraction of Light 284
§4.11 Coherence Determination and Measurement Methods 300
§4.12 Relationship Between Coherence and Emission Spectrum 316
§4.13 Wave Equation of Mutual Coherence Function 318
§4.14 Integral Representation of Mutual Coherence Function 320
§4.15 Measurement of Coherence of a Laser Beam 324
§4.16 Coherence and Diffusing Screens 328

Chapter 5
Information Structure of Optical Signals 335

§5.1 Introduction 335
§5.2 Indeterminacy Principle 336
§5.3 Classical Representation of a Signal in Information Theory 338
§5.4 Elementary Signal 342
§5.5 Determinate Function With a Bounded Spectrum 344
§5.6 Properties of Sampling Function 350
§5.7 Determinate Function of Finite Duration 351
§5.8 One-Dimensional Functions With Finite Spectra 353
§5.9 Two-Dimensional Functions With Finite Spectra 362
§5.10 Sampling Theorem in Optics 366
§5.11 Illumination Matrix 371
§5.12 Intensity Matrix 380
§5.13 Image and Detector Matrices 383
§5.14 Temporal Sampling Points 392

Chapter 6
Holography 395

§6.1 Introduction 395
§6.2 Basic Holographic System 399
§6.3 Development of Photographic Emulsions 404
§6.4 Relationship Between an Object and a Light Wave Reaching Entrance Pupil 410
§6.5 Holograms of Very Simple Objects 417
§6.6 Holographic Microscope 421
§6.7 Relation Between an Object and a Light Wave Reaching Entrance Pupil for Arbitrary Illumination 424
§6.8 Theory of Most General Holographic System ... 428
§6.9 Alternative Representations of Spherical Fresnel Transform and Its Fourier Transform 434
§6.10 Rigorous Classification of Holograms 440
§6.11 Most Typical Systems for Obtaining Different Types of Hologram 447

§6.12 Absorption and Relief-Phase Holograms 452
§6.13 Amplitude Synthesis of Images 457
§6.14 Correlative Compensation of Extended Reference Source Effects 459
§6.15 Theory of Correlative Compensation of Extended Source Effects 462
§6.16 Holograms of Phase Objects 465
§6.17 Information Capacity of a Photographic Emulsion and Its Use in Holography 480
§6.18 Some Features of Amplitude Synthesis of Images by Holography 485
§6.19 Synthesized Holograms 489
§6.20 Coherence in Holography 505
§6.21 Intensity Holograms Obtained Under Incoherent Illumination Conditions 519
§6.22 Holograms Formed with a Fresnel Zone Plate .. 532
§6.23 Achromatic Holography 535
§6.24 Volume Holograms 545
§6.25 Vector Field Holograms of Two Polarization States 560
§6.26 Ghost Images 562
§6.27 Polychromatic Images 563
§6.28 Aberrations in Holography 567
§6.29 Generalized Hologram and Principle of a Reference Object 572
§6.30 Stroboscopic Holograms 575

Chapter 7
Optical Information Processing Methods 579

§7.1 Increasing Importance of Optics in Computing Technology 579
§7.2 Fourier Transformation in a Coherent Optical System 580
§7.3 Linear Optical Filter 585
§7.4 Principle of Spatial Filtering of Images 587
§7.5 Optical Correlator 587
§7.6 Convolution and Correlation in Coherent Optical Systems 593
§7.7 Image Recognition 596
§7.8 Binary Matched Filter 599

§ 7.9 Main Components of a Coherent Optical System . 601
§ 7.10 Generalized Fresnel Function 604
§ 7.11 Optical Stage 606
§ 7.12 Imaging Condition 608
§ 7.13 Condition for Obtaining a Fourier Transform . . . 610
§ 7.14 Change of Scale in a Fourier Transform 612
§ 7.15 Multistage Optical Systems 614
§ 7.16 Multichannel Systems 616
§ 7.17 Spatial Invariance of Linear Optical Filter 618
§ 7.18 Suppression of Noise by Spatial Differentiation of Optical Signals 622
§ 7.19 Permissible Displacements of a Filter 627
§ 7.20 Some Optical Systems Used in Preparation of Matched Filters 635
§ 7.21 File of Matched Filters. 639
§ 7.22 Capacity of Matched-Filter File. 642
§ 7.23 Incoherent Optical Information Processing Systems 650
§ 7.24 Two-Dimensional Translator 658
§ 7.25 Temporal Holographic Filter 662
§ 7.26 Correlative Comparison of Two Signals 666
§ 7.27 Redistribution of Information Degrees of Freedom 671
§ 7.28 Operation of a Coherent Side-Looking Radar Station 683
§ 7.29 Theory of Coherent Side-Looking Radar 687
§ 7.30 Analysis of Data in a Coherent Radar Frame . . . 695
§ 7.31 A Posteriori Image Processing Apodization 699
§ 7.32 Removal of Spherical Aberration of Lenses 702

Appendix 703

Optical Computing, by George W. Stroke 705
Retrieval of Good Images from Accidentally Blurred Photographs, by George W. Stroke, Maurice Halioua, Venugopal Srinivasan, and Morimasa Shinoda 749
Image Improvement and Three-Dimensional Reconstruction Using Holographic Image Processing by George W. Stroke, Maurice Halioua, Friedrich Thon, and Dieter H. Willasch 755
