

CONTENTS

Preface -----	v
Applied Laser Tooling O.D.D. Soares; M. Perez-Amor -----	1
Industrial Applications of Lasers Overview A. Sona -----	25
The Physics of Laser B. Leon -----	43
Process and Physical Aspects of Continuous Wave Laser Processing R.C. Crafer; P.J. Oakley -----	55
Non-Metallic Materials Processing: An Introduction I.J. Spalding -----	81
Laser Micromachining of Materials for Electrical and Electronic Devices G. Rauscher -----	95
Metallic Materials Processing: Cutting and Drilling A. Sona -----	105
Heat Flow and Fluid Aspects of CO ₂ Laser Welding Physics Model R.C. Crafer -----	115
Surface Engineering with Lasers: I - Laser Transformation Hardening II - Laser Surface Melting III - Laser Surface Alloying IV - Laser Surface Cladding W.M. Steen -----	131
Laser Cladding with Pneumatic Powder Delivery Y. W. Weerasinghe; W.M. Steen -----	183
Laser Metalworking P. Pizzi -----	213
Laser Processing Systems in Production Plants G.H. Parsons -----	235
Applications of Lasers in Planar and Three-Dimensional Silicon Integrated Circuit Fabrication D.P. Yu -----	243

VIII

Operation of a Laser Facility: Maintenance - In Process Diagnostics - Investment and Running Costs. A. Sona -----	261
Current and Future Trends in Laser Processing W.M. Steen -----	267
Chemical Processing with Laser: Deposition, Etching and Formation of Oxides and Components D. Baüerle lectures -----	279
Conclusion and Perspectives -----	281
Subject - Index	283
