Preface	ix
<b>1 Introductory Quantum Mechanics</b>	<b>1</b>
1.1 The basic postulates	1
1.2 Formal solution of Schrödinger's equation	3
1.3 Matrix representation	5
1.4 Coupling of angular momentum	11
1.5 Rotation of frame in quantum mechanics	12
1.6 Time independent perturbation theory	15
1.7 Time dependent perturbation theory	17
<b>2 The Density Matrix Formalism</b>	<b>19</b>
2.1 Magnetization of an ensemble of particles	19
2.2 Statistical ensembles	22
2.3 The statistical operator $\varrho$	23
2.4 Expectation values of an operator	24
2.5 Properties of $\varrho$	25
2.6 Systems in the presence of each other	27
2.7 Time dependence of $\varrho$	28
2.8 Time dependence of operator's averaged over the ensemble	30
<b>3 Effects of Perturbations of the Density Matrix</b>	<b>33</b>
3.1 Interaction representation	34
3.2 Interaction representation as a rotation of axis	35
3.3 Coherent and random perturbations	37
3.4 Relaxation	42
<b>4 Magnetism and Magnetic Resonance</b>	<b>47</b>
4.1 Effect of a coherent r.f. field on the density matrix	47
4.2 Magnetization	50
4.3 $\pi/2$ and $\pi$ pulses	52

4.4	Random perturbation for the case $I = \frac{1}{2}$	53
4.5	Bloch susceptibilities	55
4.6	$\pi$ and $\pi/2$ pulses in the presence of relaxation	58
4.7	Stimulated emission	59
4.8	Spin echo	65
<b>5</b>	<b>Selected Applications of the Density Matrix Formalism</b>	<b>71</b>
5.1	Optical pumping	71
5.2	Spin exchange interaction	77
5.3	Molecular amplifiers	87
5.4	The laser	99
Appendix A.		104
Appendix B.		106
Appendix C.		107
Bibliography		108
Index		112
