CONTENTS

1 HISTORICAL DEVELOPMENT OF THE LASER ANEMOMETER

1.1	Introduction	1
1.2	The first measurement of laser Doppler shift	3
1.3	The single-beam laser anemometer	5
1.4	Alignment of the laser anemometer	7
1.5	Standard dual-beam laser anemometer	8
1.6	Self-aligning dual-beam laser anemometer	9
1.7	Fringe model of the laser anemometer	10

2 RELATED PHYSICAL PHENOMENA

2.1	Introduction	12
2.2	Principles of the laser	12
2.3	Doppler shift caused by a moving scattering centre	20
2.4	Optical mixing	23
2.5	The detection of light	26
2.6	Intensity of the scattered light	33

3 PRINCIPLES OF OPERATION OF LASER DOPPLER VELOCIMETERS

3.1	Introduction	37
3.2	Simplified theory of laser anemometers based on the Doppler shift of the scattered radiation	38
3.3	Fringe model	42
3.4	Filter model	44
3.5	Detailed theory of laser anemometers	47
3.6	A reference beam system	60
3.7	The sampling volume	63
3.8	Determination of the velocity vector	64
3.9	Power spectrum of the photo-current	68
3.10	Doppler uncertainty	74
3.11	Equivalence of laser velocimeter models	79

4 SIGNAL PROCESSING
4.1 Introduction 84
4.2 Frequency-domain signal analysis 85
4.3 Time-domain analysis 88
4.4 Correlation methods 95
4.5 Direct optical methods for signal analysis 98
4.6 Some practical aspects of velocity tracking 100
4.7 Methods for improving the signal to noise ratio 104

5 MEASUREMENT OF TURBULENCE PARAMETERS
5.1 Introduction 106
5.2 Definition of turbulence parameters 108
5.3 Measurement of turbulence velocities 109
5.4 Measurement of Reynolds stresses 112
5.5 Measurement of turbulence spectra 115
5.6 Measurement of turbulence correlation 117
5.7 Measurement close to the wall of a pipe 118
5.8 Velocity profiles and turbulence intensities in Newtonian and non-Newtonian pipe flow 119

6 APPLICATIONS OF LASER ANEMOMETERS
6.1 Introduction 122
6.2 Uses of laser anemometers in wind tunnels 123
6.3 Atmospheric wind velocity measurements 125
6.4 Noise in systems 131
6.5 Effects of atmospheric turbulence 132

Appendix 3A Derivation of equation 3.26 133
Appendix 3B Derivation of the following identity:
$2 \langle \sum_{m<n} \sum_{m=1} a_m^2 a_n^2 \rangle = \langle \sum a_n^2 \rangle^2$ 135
Appendix 3C Calculation of the probability distribution of the distance ε between two points inside a circle of unit radius 136
Appendix M1 Propagation of Gaussian beams 138
Appendix M2 Auto-correlation functions of random processes and their power spectra 140
Appendix M3 Poisson statistics 143
