

Contents

1	Basic Theorems and Postulates of Quantum Mechanics	1
1.1	The Schrödinger Wave Equation, 1	
1.2	The Time-Independent Schrödinger Wave Equation, 8	
2	Some Solutions of the Time-Independent Schrödinger Equation	19
2.1	Parity, 19	
2.2	The Harmonic Oscillator, 20	
2.3	The Schrödinger Equation in Spherically Symmetric Potential Fields, 29	
2.4	The Angular Momentum Operators and Their Eigenfunctions, 32	
3	Matrix Formulation of Quantum Mechanics	35
3.1	Some Basic Matrix Properties, 35	
3.2	Transformation of a Square Matrix, 36	
3.3	Matrix Diagonalization, 37	
3.4	Representations of Operators as Matrices, 38	
3.5	Transformation of Operator Representations, 39	
3.6	Deriving the Eigenfunctions and Eigenvalues of an Operator by the Matrix Method, 40	
3.7	The Heisenberg Equations of Motion, 42	
3.8	Matrix Elements of the Angular Momentum Operators, 43	
3.9	Spin Angular Momentum, 46	
3.10	Addition of Angular Momenta, 47	
3.11	Time-Independent Perturbation Theory, 49	
3.12	Time-Dependent Perturbation Theory—Relation to Line Broadening, 52	
3.13	Density Matrices—Introduction, 58	
3.14	The Density Matrix, 58	
3.15	The Ensemble Average, 59	
3.16	Time Evolution of the Density Matrix, 60	

4	Lattice Vibrations and Their Quantization	63
4.1	Motion of Homogeneous Line, 63	
4.2	Wave Motion of a Line of Similar Atoms, 64	
4.3	A Line with Two Different Atoms, 66	
4.4	Lattice Sums, 70	
4.5	Quantization of the Acoustic Branch of Lattice Vibrations, 71	
4.6	Average Thermal Excitation of Lattice Modes, 76	
5	The Quantization of Electromagnetic Radiation	79
5.1	The Expansion of the Electromagnetic Radiation Field inside a Generalized Resonator, 79	
5.2	The Quantization of the Radiation Field, 82	
5.3	Mode Density and Blackbody Radiation, 86	
6	Polarization and Energy in Insulators	89
6.1	Electronic Polarization, 89	
6.2	Ionic Polarization, 91	
6.3	Depolarization Fields, 92	
6.4	Electromagnetic Energy and Power in Polarized Media, 94	
6.5	Power Dissipation in Harmonic Fields, 97	
7	Dia- and Paramagnetism	100
7.1	The Magnetic Moment of a Bound Electron, 100	
7.2	The Magnetic Moment of Atoms and Free Ions, 105	
7.3	Static Paramagnetism, 109	
7.4	The Equation of Motion of the Magnetic Moment, 110	
7.5	Magnetic Moments in Time-Varying Fields, 114	
7.6	Quantum Mechanical Treatment of a Two-Level Spin System in a Time-Harmonic Field, 116	
8	Paramagnetic Resonance	122
8.1	Transitions between Broadened Energy Levels, 122	
8.2	Paramagnetic rf Susceptibility, 125	
8.3	Bloch Phenomenological Equations, 127	
8.4	The Kramers-Kronig Relations, 130	
8.5	Susceptibility of Inhomogeneously Broadened Spin Systems, 131	
8.6	The Equivalent Circuit of a Cavity Containing a Paramagnetic Sample, 133	
8.7	On the Detection of Paramagnetic Resonance, 135	

9	Paramagnetism of Ions in Crystals	138
9.1	The Spin-Orbit Interaction, 138	
9.2	The Eigenfunctions in a Crystal, 140	
9.3	The Quenching of the Orbital Angular Momentum, 142	
9.4	The Effective Spin Hamiltonian, 143	
9.5	The Spin Hamiltonian and Energy Splitting in Uniaxial Symmetry, 147	
9.6	The Spin-Lattice Relaxation, 148	
9.7	The Spin-Spin Relaxation, 154	
10	The Paramagnetic Maser	158
10.1	The Reflection-Cavity Maser, 159	
10.2	The Critical Population Inversion, 161	
10.3	The Traveling-Wave Maser, 163	
10.4	Methods for Obtaining Population Inversion, 165	
10.5	Ruby as a Maser Material, 169	
11	Spontaneous Emission—Noise in Maser Amplifiers	174
11.1	Spontaneous Emission—General Introduction, 174	
11.2	The Spontaneous Lifetime of an Atom in Free Space, 176	
11.3	The Spontaneous Lifetime of a Spin in a Microwave Cavity, 176	
11.4	Thermal Noise, 179	
11.5	Noise in a Maser Amplifier, 181	
12	Ferromagnetic Resonance	188
12.1	The Exchange Interaction, 188	
12.2	Spontaneous Magnetization in Ferromagnets, 190	
12.3	Ferromagnetic Resonance, 193	
12.4	Ferromagnetic Resonance Theory Including Relaxation, 194	
12.5	Faraday Rotation in Ferromagnetic Materials, 195	
12.6	Applications of Ferromagnetic Resonance, 198	
13	Interaction of Radiation and Atoms	202
13.1	A Few Remarks on Energy Levels, 202	
13.2	Spontaneous and Induced Transitions at Optical Frequencies—Quantized Field Approach, 203	
13.3	The Einstein Treatment of Induced and Spontaneous Transitions, 208	
13.4	The Oscillator Strength, 212	
13.5	Coherent Transitions between Levels, 213	

14	Optical Resonators	219
	14.1 General Background, 219	
	14.2 The Propagating Beam Modes, 221	
	14.3 Optical Resonators, 226	
	14.4 The Symmetrical Mirror Resonator, 227	
	14.5 The Resonance Frequencies, 232	
	14.6 Characterization of Losses in Optical Resonators, 234	
15	The Laser	237
	15.1 The Laser Oscillation Condition, 237	
	15.2 Homogeneous and Inhomogeneous Distribution in Laser Oscillators, 242	
	15.3 Rate Equations for Three- and Four-Level Lasers, 244	
	15.4 Optimum Coupling, 248	
16	Some Laser Systems and Their Pumping—Homogeneous and Inhomogeneous Systems	251
	16.1 Optical Pumping in Solid-State Lasers, 251	
	16.2 Some Solid-State Lasers, 253	
	16.3 Some Gaseous Lasers, 257	
	16.4 Gain Saturation in Homogeneous and Inhomogeneous Laser Media, 263	
	16.5 The Inhomogeneous “Hole” Width, 267	
17	Semiconductor Lasers	269
	17.1 Some Semiconductor Background, 270	
	17.2 Band-to-Band Transitions and Absorption in Semiconductors, 272	
	17.3 The Bernard-Duraffourg Inversion Condition, 276	
	17.4 The p - n Junction Laser, 277	
	17.5 Amplification and Oscillation in p - n Diode Lasers, 282	
	17.6 The Start-Oscillation Condition for Semiconductor Junction Lasers, 284	
	17.7 Mode Confinement in p - n Junction Lasers, 287	
18	The Electrooptic Effect in Crystals	293
	18.1 Propagation of Electromagnetic Radiation in Anisotropic Crystals, 293	
	18.2 The Index Ellipsoid, 296	
	18.3 Propagation in Uniaxial Crystals, 299	
	18.4 The Linear Electrooptic Effect, 300	
	18.5 The Quadratic Electrooptic Effect, 306	

19	Electrooptic Modulation of Light	310
	19.1 Amplitude Modulation of Light, 310	
	19.2 Modulation of Light by Means of the Quadratic Electrooptic Effect, 314	
	19.3 Internal Modulation in Laser Oscillators, 316	
	19.4 Beam Deflection, 325	
20	The Microwave Parametric Amplifier	329
	20.1 The Microwave Parametric Amplifier, 330	
	20.2 The Power Gain and the Oscillation Condition, 332	
	20.3 The Noise Temperature of the Parametric Amplifier, 334	
	20.4 Some Practical Remarks, 336	
21	Nonlinear Optics	340
	21.1 The Nonlinear Optical Susceptibility Tensor, 341	
	21.2 Kleinman's Symmetry Conditions, 343	
	21.3 An Estimate of the Magnitude of d_{ijk} , 344	
	21.4 The Electromagnetic Formulation of the Nonlinear Interaction, 348	
	21.5 Optical Second Harmonic Generation, 350	
	21.6 Index Matching, 352	
	21.7 Two-Photon Absorption, 356	
22	Optical Parametric Oscillation and Frequency Conversion	363
	22.1 The Parametric Oscillator, 363	
	22.2 Frequency Tuning, 366	
	22.3 The Parametric Amplifier, 368	
	22.4 Parametric Frequency Conversion, 371	
	22.5 Quantum Mechanical Description of Parametric Processes—Noise, 374	
	22.6 Some General Remarks Concerning Parametric Interactions, 377	
23	Stimulated Raman Emission	382
	23.1 Quantum Mechanical Description of Raman Scattering, 384	
	23.2 Stimulated Raman Emission, 389	
	23.3 Electromagnetic Treatment of Stimulated Raman Scattering, 391	
	23.4 Anti-Stokes Emission, 396	
	23.5 Self-focusing of Optical Beams, 399	

24	Noise in Laser Amplifiers and Oscillators	406
24.1	Noise in Laser Oscillators, 406	
24.2	An Alternative Derivation of the Spectral Width of the Laser Output, 410	
24.3	Noise in Laser Amplifiers, 412	
24.4	Photon Statistics—Introduction, 418	
24.5	The Model, 418	
24.6	The Density Matrix for the Laser Mode, 420	
24.7	The Diagonal Terms of the Density Matrix, 420	
24.8	The Probability Distribution for the Number of Quanta in the Mode, 421	
24.9	Calculation of Linewidth of a Laser, 424	
25	Scattering of Optical Beams from Acoustic Waves—Stimulated Brillouin Scattering	430
25.1	A Doppler Description of Brillouin Scattering, 430	
25.2	A Classical Treatment of Brillouin Scattering, 433	
25.3	Stimulated Brillouin Scattering, 437	
25.4	Quantum Mechanical Analysis of Brillouin Scattering in a Resonator—Theoretical Background, 440	
25.5	Parametric Amplification and Oscillation—Classical Treatment, 447	
25.6	Frequency Conversion by Coherent Scattering of Light from a Sound Wave, 452	
	Appendices	455
1	The Kramers-Kronig Relations, 455	
2	The Lineshape of a Doppler-Broadened Transition in a Gas, 457	
3	Derivation of the Relationship between the (Linear) Electrooptic and the Nonlinear Optical Tensors, 459	
4	Materials in Which Stimulated Raman Emission Has Been Observed, 461	
5	Solid Angle Associated with a Blackbody Mode, 465	
	Index	467
