1. Optical Spectroscopy of Electronic Centers in Solids	
By G. F. Imbusch and R. Kopelman (With 20 Figures)	1
1.1 Overview	1
1.2 Interaction of Electronic Center with Optical Radiation	1
1.3 Eigenstates for the Electronic Center in a Solid	3
1.4 Energy Levels and Radiative Transitions in Ionic Centers	5
1.4.1 Rare Earth Ions in Static Environment	5
1.4.2 Transition Metal Ions in a Static Environment	9
1.4.3 Interaction of the Optically Active Ion with Lattice Modes	12
1.5 Energy Levels and Radiative Transitions in Isolated Molecular Centers	15
1.6 Broadening of the No-Phonon Line	18
1.7 Nonradiative Relaxation	22
1.8 Increased Concentration and Excitation Transfer	25
1.8.1 Increased Concentration – Ionic Solids	25
1.8.2 Increased Concentration – Molecular Solids	28
1.9 Fully Concentrated Materials	30
1.9.1 Fully Concentrated Material – Ionic Solids	31
1.9.2 Fully Concentrated Materials – Molecular Solids	35
References	36
2. Excitation Transfer in Disordered Systems	
By T. Holstein, S. K. Lyo, and R. Orbach (With 7 Figures)	39
2.1 Excitation Localization	39
2.2 Phonon-Assisted Excitation Transfer	40
2.3 Nonresonant Excitation Transfer	42
2.3.1 Formulation of the Problem	43
2.3.2 One-Phonon-Assisted Process	45
2.3.3 Two-Phonon-Assisted Processes	49
2.4 Phonon-Assisted Radiative Transfer	63
2.4.1 One-Phonon-Assisted Process	64
2.4.2 Two-Phonon-Assisted Processes	71
2.5 Phonon Trapping	75
2.5.1 Relationship to Radiative Trapping	76
2.5.2 Frequency Shifting Mechanism by Energy Transfer	77

2.6 Conclusion	79
Note Added in Proof	80
References	80
3. Dynamics of Incoherent Transfer. By D. L. Huber (With 12 Figures)	83
3.1 Rate Equations	83
3.2 Fluorescence Line Narrowing	85
3.2.1 General Theory and Exact Results	85
3.2.2 Approximations	87
3.2.3 Further Approximations	90
3.2.4 Development of the Background Fluorescence	91
3.2.5 Experimental Studies	94
3.3 Fluorescence in the Presence of Traps, Exact Results	96
3.3.1 Early Models	97
3.3.2 Average T -Matrix Approximation	99
3.3.3 Experimental Studies	102
3.4 Summary and Outlook	106
Appendix 3.A	107
Appendix 3.B	109
References	110
Additional References with Titles	111
4. General Techniques and Experimental Methods in Laser Spectroscopy of Solids. By P. M. Selzer (With 7 Figures)	113
4.1 Fluorescence Line Narrowing in Solids	115
4.1.1 Phenomenological Model	115
4.1.2 Sources of Residual Broadening	117
4.1.3 Spectral Dynamics	120
4.1.4 Experimental Details	122
4.2 Saturation Spectroscopy in Solids	126
4.2.1 Hole Burning	127
4.2.2 Polarization Spectroscopy	130
4.3 Coherent Transient Spectroscopy	131
4.4 Light Scattering	135
4.5 Photoacoustic (or Optoacoustic) Spectroscopy	135
4.6 Degenerate Four-Wave Mixing (Transient Grating Spectroscopy)	136
4.7 Conclusion	137
References	137
5. High Resolution Laser Spectroscopy of Ions in Crystals	
By W. M. Yen and P. M. Selzer (With 25 Figures)	141
5.1 Homogeneous Linewidth Studies	141

5.1.1 Ruby [Al ₂ O ₃ :Cr ³⁺]	142
5.1.2 Trivalent Praseodymium in Lanthinum Fluoride [LaF ₃ :Pr ³⁺]	149
5.1.3 Actinides and Other Centers	152
5.2 Static Spectral Features	154
5.2.1 Hyperfine and Other Structures	154
5.2.2 Site and Impurity Selectivity	158
5.2.3 Assisted Transitions	160
5.3 Single-Ion and Interior Dynamics	162
5.3.1 Single-Ion Dynamics	162
5.3.2 Energy Transfer	165
5.4 Concentrated Materials and Excitonic Effects	175
5.4.1 PrF ₃ and PrCl ₃	175
5.4.2 Tb(OH) ₃	177
5.4.3 Magnetic Excitons	178
5.4.4 Other Concentrated Materials	182
5.5 Conclusion	183
References	184
Additional References with Titles	188
6. Laser Excited Fluorescence Spectroscopy in Glass	
By M. J. Weber (With 22 Figures)	189
6.1 Background	189
6.2 Glass Properties	191
6.2.1 Structure	191
6.2.2 Activator Ions and Molecules	192
6.3 Experimental Techniques	196
6.3.1 Fluorescence Line Narrowing	196
6.3.2 Temporal Dependence	198
6.3.3 Polarization	199
6.3.4 Excitation-Fluorescence Schemes	200
6.3.5 Accidental Coincidence	201
6.4 Experimental Apparatus	202
6.5 Experimental Results	203
6.5.1 Energy Levels	203
6.5.2 Transition Probabilities	214
6.5.3 Homogeneous Linewidth	219
6.5.4 Energy Transfer	223
6.6 Applications of Fluorescence Line Narrowing	227
6.6.1 Glass Structure	227
6.6.2 Structural Changes	231
6.6.3 Laser Glass	233
6.7 Concluding Remarks	234
References	236
Recent References (added in proof)	239

7. Excitation Dynamics in Molecular Solids	
By A. H. Francis and R. Kopelman (With 24 Figures)	241
7.1 Lineshape Studies of Excitation Dynamics	241
7.1.1 Pure Crystal Lineshape Theory	243
7.1.2 Lineshape Studies in Pure Crystals	251
7.1.3 Chemically Mixed Crystal Lineshape Theory	257
7.1.4 Lineshape Studies in Chemically Mixed Crystals	261
7.2 Excitation Migration in Ordered Crystals ("Neat" and Lightly Doped)	265
7.2.1 Exciton Fusion Experiments	266
7.2.2 Exciton Trapping Experiments	269
7.3 Excitation Migration in Substitutionally Disordered Crystals	271
7.3.1 Trap-to-Trap Transfer	271
7.3.2 Cluster-to-Cluster Migration	272
7.3.3 Critical Concentrations	273
7.3.4 Cluster Percolation	276
7.3.5 Exciton Percolation Formalism	280
7.3.6 Dynamic Percolation	282
7.3.7 Anderson-Mott Transition	286
7.3.8 Universality and Exciton Percolation	290
7.3.9 Ordered vs Disordered Crystals	293
Epilogue	299
