

CONTENTS

	<i>Page</i>
1. INTRODUCTION J. B. Birks	9
<i>Modern Dielectric Materials—Dielectric Properties—Thermal, Mechanical, and Other Properties</i>	
2. PAPER H. C. Hall and E. Kelk	26
<i>Introduction—General Description of Paper—Chemical Characteristics of Insulating Paper—Physical Properties—Electrical Characteristics</i>	
3. HYDROCARBON INSULATING OILS N. Pilpel and E. H. Reynolds	45
<i>Origin—Refining—Constitution—Gassing—General Physical and Chemical Properties—Applications</i>	
4. CHLORINATED HYDROCARBONS J. B. Birks	68
<i>Introduction—Composition—Dielectric Constant and Loss—Dielectric Strength—Electrical and Chemical Stability</i>	
5. NATURAL AND SYNTHETIC RUBBERS W. J. Green and S. Verne	79
<i>General—Electrical Properties—Main Uses of Rubber Dielectrics</i>	
6. SYNTHETIC HIGH POLYMERS J. B. Birks	95
<i>Introduction — Polyethylene — Polystyrene — Polyisobutylene — Polyvinyl Chloride and Copolymers—Other Vinyl Polymers—Polytetrafluoroethylene—Polytrifluorochloroethylene—Polyethylene Terephthalate—The Cellulose Derivatives—The Phenolic Resins—Other Thermosetting Resins—The Epoxy Resins—Polypropylene</i>	
7. SILICONES D. J. Dowling	145
<i>Introduction—Silicone Fluids—Silicone Rubbers—Silicone Resins—Compounds—Conclusion</i>	

8. CERAMICS P. Popper 164
Introduction—Ceramic Technology—Materials and Their Properties—Materials with Low Permittivity ($\epsilon < 12$)—Materials with High Permittivity ($\epsilon > 12$)—Applications
9. GLASS H. E. Taylor 196
Introduction—The Chemical Composition—The Manufacture of Glass—Physical Properties—Electrical Properties—Applications
10. MICA AND MICANITE J. B. Birks 221
Introduction—Mica—Micanite
11. FIBRES AND TEXTILES J. W. S. Hearle 230
Introduction—Dielectric Constant and Power Factor—Electrical Resistance—Electrical Breakdown
