

CONTENTS

Chapter 1	Some Properties of Vector Space	
	The concept of vector space	Page 1
<i>I</i>	<i>Systems with a finite number of degrees of freedom. Classical notation</i>	2
1	The 'basis' of a vector space	2
2	Linear operators	4
3	Representation of linear operators by matrices	4
4	Eigenvectors and eigenvalues	6
5	The operator in the dual space	6
<i>II</i>	<i>Operators in continuous systems</i>	8
1	Introduction	8
2	Operators applied to functions	8
3	Adjoint operators	9
4	Transpose operator	10
5	Orthogonality of the eigenfunctions	11
6	The Dirac 'function'	11
Chapter 2	The Dyadic Calculus	
1	Definition of the dyad	16
2	The inner and outer products of a dyad with a vector	17
3	The condition for equality of two dyads	19
4	The unit dyad	19
5	The inner product of two dyads	19
6	Theorems relating to the unit dyad	20
7	The reciprocal dyad	20
8	The transpose dyad	21
9	Application of the ∇ operator to a dyad	21

Chapter 3 Green's Function

1 Definition	23
2 The linear differential operator with constant coefficients	25
3 Principal properties of Green's function..	26
4 The operator $-\alpha^2 \nabla^2 + 1$ in spherical coordinates.....	27
5 Green's function for the Sturm-Liouville problem	28
6 Solution of the scalar wave equation with the aid of Green's theorem	30
7 The vector wave equation	32
7.1 The vector form of Green's theorem .	32
7.2 General solution of the vector wave equation (3.32)	33
7.3 Boundary conditions	34
7.4 Principle of reciprocity	34
7.4 Relations between the dyadic Green's function and the scalar Green's function	35
7.6 Expansion of the dyadic Green's function as a series of normal modes in waveguide problems	36

Chapter 4 A General Survey of Variational Principles

1 Introduction. Variational methods—their nature and their importance	40
2 Variational principles for eigenvalue problems	48
3 The construction of eigenvalue problems.	52
4 Some particular operators	54
5 Un-normalized variational principles	56
6 Some applications	57
7 The choice of trial function: Ritz's method	61

Chapter 5	Variational Principles for Resonance Frequencies and Energy Levels	
1	The Helmholtz equation	64
2	Perturbation of a boundary	65
3	The Schrödinger equation	67
4	Variational principles for the integral equations corresponding to the Helmholtz and Schrödinger equations	67
Chapter 6	Problems of Diffraction and of Radiation	
1	The problem of diffraction	69
2	Solution of the integral equation	70
3	The variational calculation of phase change	73
4	Variational calculation of the diffracted amplitude	75
5	Scattering due to the presence of reflecting surfaces	76
6	Variational principle for scattering by reflecting surfaces	77
7	Variational principles for the integral equation with boundary perturbations ...	78
8	Variational principle for the radiation problem	79
Chapter 7	Variational Principles in the Problem of Scattering of Electromagnetic Waves by Conducting Surfaces	
1	The integral equation: the scattered amplitude.....	81
2	Variational principle for the scattered amplitude	83
3	Scattering by a cylindrical obstacle: the case of a plane wave with the electric field parallel to the axis of the cylinder	85
4	Scattering by a cylindrical obstacle: the case of a plane wave whose electric field is perpendicular to the axis of the cylinder..	88
5	Variational principle for the parameter U	91

Chapter 8	Diffraction of Electromagnetic Waves by an Aperture in a Perfectly Conducting Screen	
1	Symmetry properties of the solutions of Maxwell's equations with respect to a plane of symmetry	93
2	Formulation of boundary conditions	95
3	The existence theorem	97
4	The diffracted amplitude: variational principle	100
Chapter 9	General Variational Principles Relating to Cavities and to Waveguides	
1	Variational principles for resonance frequencies	104
(a)	Formulation in terms of the electric field	104
(b)	Formulation in terms of the magnetic field	105
(c)	Formulation in terms of mixed fields	105
2	Variational principles for the propagation constant of a waveguide	106
(a)	Formulation in terms of mixed fields	106
(b)	Formulation in terms of the electric field	107
(c)	Formulation in terms of the magnetic field	108
(d)	A particular case (gyromagnetic media)	108
Chapter 10	The Approximate Calculation of the Cut-Off Frequency of a Cylindrical Waveguide of Arbitrary Cross-section	
1	General considerations	110
2	A summary of the theory of propagation of waves in guides	112
3	Extremal expression for calculation of the cut-off frequency, and associated variational principles	116

4 A series of inequalities	118
5 Calculation of eigenvalues from approximate field distributions	120
Chapter 11 Variational Principles for Electromagnetic Waves Propagated by Anisotropically Filled Guides	
1 Introduction.....	122
2 The integral equations of the electromagnetic field	122
3 Variational principles	126
Chapter 12 The Capacitive Obstacle in a Rectangular Waveguide	
1 Statement of the problem: general considerations	131
3 Theory of the capacitive diaphragm: generalities	133
3 Establishment of an integral equation for the transverse magnetic field at the diaphragm	135
4 A stationary expression for the equivalent capacitance of the diaphragm	141
Appendix I The concept of vector space	143
Appendix II The Dirac notation	144
1 The 'basis' of a vector space	144
2 Linear operators	145
3 Representation of linear operators by matrices	146
4 Eigenkets and eigenvalues	147
5 The operator in the dual space.....	147
Bibliography	149
Index	151
