## Contents

| Pr       | Preface                                     |  | ix  |
|----------|---|--|-----|
| Notation |   |  | xi  |
| 1        | Historical Background and Elementary Theory |  | 1   |
|          | 1.1   | Historical background                                  | 1   |
|          | 1.2   | Fundamental definitions                                | 5   |
|          | 1.3   | Orders of magnitude                                    | 12  |
|          | 1.4   | Summary of electrostatic equations in uniform fields   | 13  |
|          | 1.5   | Gauss's law-the electric field due to an assembly of   |     |
|          |   | charges  | 16  |
| 2        | Elect                                       | rification of Solids and Liquids                       | 17  |
|          | 2.1   | Contact and frictional charging                        | 17  |
|          | 2.2   | Corona charging  | 46  |
|          | 2.3   | Charging by the capture of small particles             | 60  |
|          | 2.4   | Induction charging                                     | 61  |
|          | 2.5   | Double-layer charging                                  | 64  |
|          |   | References   | 85  |
| 3        | Measu                                       | rements and Instrumentation                            | 91  |
|          | 3.1   | Introduction   | 91  |
|          | 3.2   | Potential dividers and resistance probes               | 92  |
|          | 3.3   | Electrometers and electrostatic voltmeters             | 92  |
|          | 3.4   | Field meters and non-contacting voltmeters             | 96  |
|          | 3.5   | Charge measurement—the Faraday cup                     | 108 |
|          | 3.6   | Measurement of the charge and mobility of individual   |     |
|          |   | particles  | 110 |
|          | 3.7   | Field and potential probes                             | 115 |
|          | 3.8   | The use of the Kerr and Pockels effect for measurement |     |
|          |   | of electric fields                                     | 124 |
|          |   |  | v   |

|----|----------|
| vi | Contents |

|   | 3.9                              | Capacitance meters                                  | 128 |
|---|----------------------------------|---|-----|
|   | 3.10                             | Measurement of resistance and resistivity           | 129 |
|   | 3.11                             | Energy of electrostatic sparks                      | 136 |
|   |                                  | References  | 140 |
| 4 | Electrostatics in Gas Filtration |   |     |
|   | 4.1                              | Introduction  | 144 |
|   | 4.2                              | Electrostatic precipitation                         | 146 |
|   | 4.3                              | Electron beam desulphurisation and denitrisation    | 163 |
|   | 4.4                              | Electrostatically enhanced cyclone separators       | 164 |
|   | 4.5                              | Electrostatic scrubbers and granular bed filters    | 166 |
|   | 4.6                              | Electrostatically enhanced fabric filters           | 183 |
|   |                                  | Appendix  | 189 |
|   |                                  | References  | 192 |
| 5 | Miscellaneous Applications       |   | 198 |
|   | 5.1                              | Electrostatic atomisation                           | 198 |
|   | 5.2                              | Electrostatic spray coating                         | 209 |
|   | 5.3                              | Electrostatic separation                            | 237 |
|   | 5.4                              | Electrokinetic phenomena in liquids                 | 248 |
|   | 5.5                              | Dielectrophoresis                                   | 269 |
|   | 5.6                              | Applications of the corona discharge                | 276 |
|   | 5.7                              | Electrodynamic containment and control of particles | 285 |
|   | 5.8                              | Applications of electromechanical forces            | 294 |
|   | 5.9                              | Electrostatic copying                               | 299 |
|   | 5.10                             | Electrostatics in the textile industry              | 302 |
|   | 5.11                             | Electrostatic crystals                              | 306 |
|   | 5.12                             | Electrostatic generators                            | 308 |
|   |                                  | References  | 312 |
| 6 | Hazards and Problems             |   | 326 |
|   | 6.1                              | Fire and explosion hazards                          | 326 |
|   | 6.2                              | Electrostatic sparks                                | 342 |
|   | 6.3                              | Non-electrostatic sparks                            | 366 |
|   | 6.4                              | Electrostatic eliminators                           | 369 |
|   | 6.5                              | Antistatic agents                                   | 376 |
|   | 6.6                              | Electrostatic problems in the electronics industry  | 383 |
|   | 6.7                              | Adhesion  | 386 |
|   |                                  | Appendix  | 410 |
|   |                                  | References  | 415 |
| 7 | Theory                           |   | 425 |
|   | 7.1                              | Fundamental laws of electrostatics                  | 425 |
|   | 7.2                              | Capacitance and capacitors                          | 434 |

|     | Conten  | ets vii |
|-----|---|---------|
| 7.3 | Polarisation  | 437     |
| 7.4 | Identification of field lines and equipotentials      | 442     |
| 7.5 | Electric field and potential by solution of Laplace's |         |
|     | equation  | 460     |
| 7.6 | Earnshaw's theorem                                    | 477     |
| 7.7 | Corona discharge theory                               | 477     |
|     | Appendix  | 487     |
