1. Propagation and Diffraction of Transient Fields in Non-Dispersive and Dispersive Media. By L. B. FELSEN (With 16 Figures)

1.1	Introduction	2
1.2	Field Equations and Boundary Conditions	5
1.2.1	Non-Dispersive Media	6
1.2.2	Dispersive Media	9
1.2.3	Dyadic Green's Functions and Scalarization	12
1.3	Eigenfunction Expansions	16
1.3.1	Basis Functions in Four Variables	17
1.3.2	Basis Functions in Three Variables (Oscillatory Modes)	19
1.3.3	Basis Functions in Three Variables (Guided Modes)	21
1.3.4	Generalizations	21
1.4	Fourier or Laplace Inversion of Time-Harmonic Field	22
1.4.1	Time-Dependent and Time-Harmonic Fields	22
1.4.2	Explicit Inversion	24
1.4.3	High-Frequency Time-Harmonic Fields and Transient Fields Near a Wavefront	26
1.4.4	Contour Integral Methods	31
1.4.5	Asymptotic Methods	31
1.5	Pulse Diffraction in Non-Dispersive Media	38
1.5.1	The Wedge	38
1.5.2	The Cone	47
1.5.3	Dielectric Half Space	51
1.6	Pulse Propagation in Dispersive Media	54
1.6.1	Lossless Isotropic Plasma—Impulse Excitation	54
1.6.2	Lossless Isotropic Plasma—Harmonic Step Signal	57
1.6.3	Lossless Isotropic Plasma—Half Space	60
1.6.4	Gaussian Pulses in Lossless Media: Complex Space-Time Rays	61
1.6.5	Pulses in Dissipative Media—Group Velocity	64
1.6.6	The Utility of Ray Diagrams and Some Analogies between Diffraction Phenomena under Time-Harmonic and Time-Dependent Conditions	66

Focusing	66
Diffraction Due to Truncation	69
Gaussian Beams and Wave Packets	71
References	71

2. Integral Equation Methods for Transient Scattering.

By R. MITTRA (With 33 Figures)

2.1 Brief Review of Historical Developments	74
2.2 Time-Domain Integral Equations	75
2.2.1 General Three-Dimensional Structures	75
The Electric and Magnetic Field Integral Equations (EFIE and MFIE)	75
Solution of Integral Equations for Three-Dimensional Scatterers	80
2.2.2 Time-Domain Integral Equation for Two-Dimensional Surfaces	82
2.2.3 The One-Dimensional Case	84
2.3 Numerical Solution of Integral Equations	86
2.3.1 The Magnetic Field Integral Equation (MFIE)	86
2.3.2 Numerical Solution of the EFIE for Thin Wires	89
2.3.3 Finite Difference Approach for EFIE	94
2.3.4 Numerical Considerations	99
2.4 Representative Results	102
2.5 Comparison of Computation Times with Frequency and Time-Domain Approaches	113
2.6 Complex-Exponential Representation of Time-Domain Response	116
2.7 Extensions of Time-Domain Methods	123
2.8 Applications	126
2.9 Conclusions	127
References	127

3. The Singularity Expansion Method. By C. E. BAUM

(With 26 Figures)

3.1 Background Leading to the Development of the Singularity Expansion Method (SEM)	130
3.1.1 Experimental Observations	130
3.1.2 Basic Aspects of SEM	130
3.1.3 Previous Work Related to SEM	133
3.2 SEM for Various Types of Problems	134
3.2.1 General Properties of the Response in the Complex Frequency Domain	134

3.2.2 Integral Equations 136

3.2.3 Finite-Size Bodies: Poles in the Finite s Plane plus
an Entire Function 138

3.2.4 Cases with More General Behavior in the s Plane 141

3.3 SEM for Current and Charge Densities on Finite-Size Objects
in Free Space 142

3.3.1 Some Definitions 142

3.3.2 Form of Current Response in Complex Frequency
Domain 143

3.3.3 Formulas and Derivations for Terms Associated with
Poles 145

3.3.4 Forms of Coupling Coefficients 147

3.3.5 Form of Current Response in Time Domain 148

3.3.6 Charge Density 149

3.3.7 Numerical Examples 150

3.4 SEM for Fields Radiated or Scattered from Finite-Size Bodies
in Free Space 164

3.4.1 Natural Modes 164

3.4.2 Retarded Natural Modes 165

3.4.3 Far Natural Modes 165

3.4.4 Numerical Examples 166

3.5 Numerical Procedures 169

3.5.1 The Newton and Muller Methods for Finding Natural
Frequencies 169

3.5.2 Contour Integral Methods 171

3.5.3 Pole Tracking in Parameter Variation 172

3.5.4 Natural Modes and Related Quantities 173

3.6 Contemporary Developments 173

3.6.1 Equivalent Circuits 173

3.6.2 Eigenmodes and Their Relation to SEM 174

3.6.3 SEM Analysis of Experimental Data 175

3.7 Summary 175

References 176

4. Radiation and Reception of Transients by Linear Antennas.

By D. L. SENGUPTA and C.-T. TAI (With 23 Figures)

4.1 Background Material 182

4.2 Transient Radiation and Reception 183

4.2.1 The Transmitting Antenna 184

4.2.2 The Receiving Antenna 188

4.2.3 Directivity 192

4.3	Fourier Transform Method of Solution	193
4.3.1	Basic Relations	193
4.3.2	Outline of the Numerical Method	196
4.4	Analytical Solution for a Reflectionless Linear Antenna	198
4.4.1	Loading of the Antenna and Current Distribution	199
4.4.2	Spectral Density of the Wave Form	200
4.4.3	Time-Dependent Radiated Wave Form	201
4.5	Numerical Solution for a Reflectionless Linear Antenna	205
4.5.1	Time-Independent Current Distribution	205
4.5.2	Transfer Function of the Antenna $F_{\theta}(\theta, \omega)$	208
4.5.3	Spectral Density of the Radiated Wave Form	209
4.5.4	Time-Dependent Radiated Wave Form	211
4.6	Space-Time Integral Equation Method of Solution	215
4.6.1	Fundamental Relations	215
4.6.2	Space-Time Integral Equation for the Current Distribution	216
4.6.3	Field Expressions	218
4.6.4	Numerical Solution of the Space-Time Integral Equation	219
4.6.5	Some Typical Results	222
4.7	Time-Domain Integral Equation	222
4.8	Direct Solution in the Time-Domain	227
4.9	Infinitely Long Linear Antenna	228
4.9.1	H-Field	229
4.10	General Comments	232
	References	234
