

Contents (Volume I)

Preface	v
 CHAPTER 1	
Kinematics of Material Continua	1
1.1. Scope of the Chapter	1
1.2. Mass and Charge	2
1.3. Motion and Deformation	4
1.4. Strain Measures	6
1.5. Polar Decomposition	8
1.6. Infinitesimal Strains	9
1.7. Volume and Area Changes	10
1.8. Compatibility Conditions	11
1.9. Deformation Rates	12
1.10. Rigid Body Motion	14
1.11. Objectivity	15
1.12. Objective Time Rates of Tensor Fields	16
1.13. Kinematics of Line, Surface, and Volume Integrals	19
Problems	23
 CHAPTER 2	
Microscopic Electromagnetic Theory	26
2.1. Scope of the Chapter	26
2.2. Electric Charge	27
2.3. Electric Moments	29
2.4. Current, Magnetic Moments	32
2.5. Microscopic Electromagnetic Fields	33
2.6. Electromagnetic Force on a Point Particle	35
2.7. Microscopic Maxwell's Equations	36
2.8. Electromagnetic Force on Composite Particles	40
2.9. Couple Acting on a Composite Particle	42
2.10. Power of Electromagnetic Forces	43
Problems	45

CHAPTER 3

Macroscopic Electromagnetic Theory	47
3.1. Scope of the Chapter	47
3.2. Statistical Averages	48
3.3. Maxwell's Equations	50
3.4. Galilean Invariance of Maxwell's Equations	52
3.5. Macroscopic Densities of Mass, Force, Couple, and Power	55
A. Mass Density	55
B. Force Density	56
C. Couple Density	59
D. Electromagnetic Power	60
3.6. Electromagnetic Stress Tensor, Momentum, and Poynting Vector	62
3.7. Electromagnetic Force, Couple, and Power at a Discontinuity Surface	65
3.8. Balance Laws of Continuum Physics	66
3.9. Balance Laws of Electrodynamics	72
A. Global Statement	72
B. Local Balance Laws	73
C. Boundary Conditions	74
3.10. Thermomechanical Balance Laws	75
3.11. Clausius–Duhem Inequality	81
3.12. Invariance Requirements for Balance Laws	82
3.13. Principle of Virtual Power	84
3.14. Résumé of Balance Laws	85
Problems	87

CHAPTER 4

Elementary Properties of Electromagnetic Continua	91
4.1. Scope of the Chapter	91
4.2. Dielectric Materials	91
4.3. Physical Theory of Dielectrics	93
A. Polarizability	93
B. The Clausius–Mossotti Equation	96
C. Ferroelectric Crystals	96
D. Electrostriction and Piezoelectricity	99
E. Pyroelectricity	100
4.4. Magnetic Materials	100
A. The Origin of Magnetism	100
B. Gyromagnetic Effects	101
4.5. Different Types of Magnetism	102
A. Paramagnetism	103
B. Ferromagnetism	104
C. Ferrimagnetism and Antiferromagnetism	110
D. Magnons	111
E. Magnetostriction and Piezomagnetism	114
4.6. Electric Conduction	114
A. Electron Conduction	114
B. Cross Effects	115

4.7. Interaction Between Light and Electromagnetic Continua	117
A. Electromagnetic Optics	117
B. Inducement of Optical Anisotropy	121
Problems	125

CHAPTER 5

Constitutive Equations	128
5.1. Scope of the Chapter	128
5.2. Résumé of Balance Laws.	129
5.3. Raison d'Être	131
5.4. Axioms of Constitutive Theory	133
A. Axiom of Causality	134
B. Axiom of Determinism	135
C. Axiom of Equipresence	136
D. Axiom of Objectivity	136
E. Axiom of Time Reversal	138
F. Axiom of Material Invariance	138
G. Axiom of Neighborhood.	141
H. Axiom of Memory	143
I. Axiom of Admissibility	144
5.5. Integrity Basis Under Crystallographic Point Groups	145
5.6. Integrity Basis Under Magnetic Point Groups.	150
5.7. Integrity Basis of Vectors and Tensors for Isotropic Materials	154
5.8. Constitutive Equations of Electromagnetic Elastic Solids.	156
5.9. Isotropic Electromagnetic Elastic Solids	159
5.10. Anisotropic Electromagnetic Elastic Solids	163
5.11. Linear Constitutive Equations	165
5.12. Electromagnetic Fluids	171
5.13. Résumé of Constitutive Equations	174
Problems	178

CHAPTER 6

Rigid Dielectrics	180
6.1. Scope of the Chapter	180
6.2. Fundamental Equations	181
6.3. Potential Theory	183
A. Green's Theorem	184
B. Uniqueness Theorem.	184
C. Representation Theorem.	185
D. Green's Function.	186
E. Green's Function for Dirichlet's Problem in Spherical Regions and in Half-Space	187
F. Eigenfunction Expansions	190
6.4. Charged Cylinder.	192
6.5. Potential in Half-Plane	193
6.6. Charged Disk	196
6.7. Plane Electromagnetic Waves in Isotropic Bodies.	198

6.8. Spherical Waves	201
6.9. Nonlinear Theory of Rigid Dielectrics	203
6.10. One-Dimensional Problem	205
6.11. Two-Dimensional Nonlinear Problem	207
6.12. Solutions of Two-Dimensional Problems for Special Dielectrics	209
6.13. Nonlinear Electromagnetic Waves	213
6.14. Electromagnetic Shock Waves in Rigid Stationary Dielectrics	217
6.15. Moving Rigid Dielectrics	224
A. Dragging of Light by a Moving Dielectric	224
B. The Rotation of a Rigid Dielectric in a Magnetic Field	226
C. Unipolar Induction	229
6.16. Nonlinear Optics	230
6.17. Solitary Waves	233
Problems	236

CHAPTER 7

Elastic Dielectrics	239
7.1. Scope of the Chapter	239
7.2. Résumé of Basic Equations	240
7.3. Uniqueness Theorem	243
7.4. Piezoelectric Moduli	246
7.5. Piezoelectrically Excited Thickness Vibrations of Plates	253
7.6. Extensional Vibrations of Piezoelectric Rods	257
7.7. Surface Waves	259
7.8. Radially Symmetric Vibrations	261
7.9. Spherically Symmetric Vibrations of Thin Ceramic Shells	263
7.10. Piezoelectrically Generated Electric Field	263
7.11. Elastic Dielectrics Subject to Finite Deformations and Fields	265
7.12. Cylindrically Symmetric Deformation of a Tube Subject to a Radial Field	269
7.13. Axisymmetric Oscillations of a Tube	273
7.14. Small Deformations and Fields Superimposed on Large Static Deformations and Fields.	278
7.15. Photoelastic Effect	287
7.16. Electro-Optical Effect	290
7.17. Magneto-Optical Effects	297
7.18. Elastic Ionic Crystals, Ferroelectrics, and Other Polarizable Solids	304
Problems	306

CHAPTER 8

Magnetoelasticity	307
8.1. Scope of the Chapter	307
8.2. Résumé of Basic Equations	308
8.3. Static Magnetoelastic Fields	314
8.4. Uniformly Magnetized Sphere in Nonpermeable Medium	316
8.5. Two-Dimensional Magnetoelasticity	319

8.6. Stress Concentration at a Circular Hole	321
8.7. Radial Motions of a Cylinder Under an Axial Magnetic Field	326
8.8. Propagation of Plane Waves	329
8.9. Waves Induced by a Thermal Shock	338
8.10. Homogeneous Strain in a Magnet	343
8.11. Simple Shear	347
8.12. Torsion of a Cylindrical Magnet	349
8.13. Electric Conduction in a Twisted Cylinder	354
8.14. Theory of Magnetoelastic Plates	359
8.15. Plate under Transverse Magnetic Field.	363
8.16. Magnetoelastic Buckling of a Circular Plate	367
8.17. Other Works: Dynamic Buckling and Nonlinear Waves	370
Problems	371

APPENDICES

A. Crystallographic Point Groups	373
B. Crystallographic Magnetic Groups	379
C. Integrity Bases of Crystallographic Groups.	384
D. Some Theorems on Symmetric Polynomial Functions	399
E. Representations of Isotropic, Scalar, Vector, and Tensor Functions	402
F. Maxwell's Equations in Various Systems of Units.	405
References	407
Index	II
