

## Contents

Preface	vii
List of principal symbols	xiii
1. ELECTROMAGNETISM AND MECHANICS	
1.1. Introduction	1
1.2. Historical background	3
1.3. Electromagnetic concepts	10
2. VARIATIONAL PRINCIPLES IN MECHANICS	
2.1. The principle of virtual work	21
2.2. Lagrange's multipliers	25
2.3. Conservation of energy	28
2.4. Co-ordinates and momenta	32
2.5. Duality and energy	36
2.6. Energy and co-energy	39
Appendix	42
3. VARIATIONAL PRINCIPLES IN ELECTROMAGNETISM	
3.1. Maxwell's analysis	45
3.2. Electrical networks	50
3.3. Distributed systems	56
3.3.1. Electrostatic systems	57
3.3.2. Magnetostatic systems	63
3.3.3. Resistive systems with steady current flow	64
3.3.4. Time-varying systems having inductance and resistance	66
3.3.5. Electromagnetic waves	70
4. SOME GENERAL ENERGY THEOREMS	
4.1. Green's theorem and the definition of electrostatic systems	76
4.2. Mutual energy and Green's functions	79
4.3. Magnetostatic systems and the vector form of Green's theorem	83

4.4.	Earnshaw's theorem	87
4.5.	Thomson's theorem	89
4.6.	Physical processes underlying Thomson's theorem	93
4.7.	Poynting's theorem	101
4.8.	Equilibrium and uniqueness conditions in terms of the potentials	109
4.9.	Rayleigh's principle	109
5.	UPPER AND LOWER BOUNDS FOR CIRCUIT PARAMETERS	
5.1.	Potential and kinetic energy	114
5.2.	Potential and kinetic energy formulation for the energy of electrostatic systems	116
5.3.	The role of the Lagrangian multiplier in generating convex or concave functionals	118
5.4.	Energy of static systems in terms of circuit parameters	119
5.5.	Numerical examples of the calculation of resistance parameters in static systems	121
5.5.1.	A simple resistance network	121
5.5.2.	Resistance of a trapezoidal conducting plate	122
5.5.3.	Resistance of a plate with a central hole	124
5.6.	Optimization of the $Z$ functional	127
5.7.	Calculation of capacitance	128
5.8.	Calculation of inductance	129
5.9.	A non-linear problem	133
5.10.	Resistance and inductance calculations for conductors carrying alternating current	134
5.10.1.	Resistance and inductance of a large flat conductor	136
5.10.2.	A problem having faulty specification of the boundary conditions	138
5.11.	Calculation of radiation resistance	140
5.12.	Transmission line calculations	144
6.	ELECTROMECHANICAL ENERGY CONVERSION	
6.1.	Calculation of force and torque	146
6.2.	The use of rotating axes in the analysis of electrical machines	152
6.3.	Parametric energy processes	160
7.	POSTSCRIPT: A COMPARISON OF METHODS FOR THE CALCULATION OF ELECTROMAGNETIC FIELDS	
7.1.	The importance of experience	167
7.2.	Analytical methods	168

## CONTENTS

xi

7.3. Relaxation methods	169
7.4. Finite-difference methods	170
7.5. Finite-element methods	171
7.6. Integral methods	172
7.7. Moment methods	173
7.8. Dual energy methods	176
<b>Index</b>	<b>179</b>
