PREFACE	ix
CONTENTS OF OTHER VOLUMES	xi

Chapter 1 **Detection Techniques at Short Millimeter and Submillimeter Wavelengths: An Overview**

T. G. Blaney

I. Introduction	2
II. The Nature of SMSMR Techniques and the Demands Made on Detectors and Receivers	3
III. Radiation Detection Devices: General Properties	13
IV. Receiver Systems: General Properties	15
V. Properties of Practical Detectors in Video Systems	31
VI. Heterodyne Receivers	54
VII. Imaging Receivers	61
VIII. Calibration and Characterization of Receiver Performance	62
IX. Conclusion	66
References	67

Chapter 2 **Optimization of Schottky-Barrier Diodes for Low-Noise, Low-Conversion Loss Operation at Near-Millimeter Wavelengths**

W. M. Kelly and G. T. Wrixon

I. Summary	77
II. Introduction	78
III. Diode Noise	79
IV. Diode Conversion Loss	82
V. High-Frequency Optimization	96
References	109

Chapter 3 **Pyroelectricity and Pyroelectric Detectors**

A. Hadni

I. Introduction	112
II. Detectivity	114
III. The Choice of Pyroelectric Materials	126
IV. Ferroelectric Domains	132
V. Thin, Oriented Pyroelectric Films	141
VI. Miscellaneous Problems	145

VII.	Infrared Imaging with Pyroelectrics	152
VIII.	Low-Temperature Pyroelectricity	160
IX.	Conclusion	175
	References	176
Chapter 4 Photon Drag Detection		
	<i>A. F. Gibson and M. F. Kimmitt</i>	
I.	Introduction	182
II.	Tensor Properties	182
III.	Photon Drag in Germanium and Silicon	185
IV.	Photon Drag and Optical Rectification in Gallium Phosphide	197
V.	Photon Drag and Optical Rectification in Tellurium	200
VI.	Photon Drag and Optical Rectification Devices	201
	References	215
Chapter 5 Electrically Excited Submillimeter-Wave Lasers		
	<i>F. K. Kneubühl and Ch. Sturzenegger</i>	
I.	History	220
II.	Design	230
III.	Plasmas	239
IV.	Transitions and Mechanisms	248
V.	Wall Processes	254
VI.	Pulses	256
VII.	Energy and Power	263
VIII.	Applications	266
IX.	Conclusions	267
	References	269
Chapter 6 Submillimeter Magnetospectroscopy of Charge Carriers in Semiconductors by Use of the Strip-Line Technique		
	<i>Michael von Ortenberg</i>	
I.	Introduction	275
II.	Submillimeter Magnetospectroscopy in Semiconductor Physics	276
III.	The Application of the "Strip-Line" Technique in Submillimeter Magnetospectroscopy	280
IV.	Summary	344
	References	344
Chapter 7 Cyclotron Resonance and Related Studies of Semiconductors in Off-Thermal Equilibrium		
	<i>Eizo Otsuka</i>	
I.	Introduction	347
II.	Far-Infrared Cyclotron Resonance of the Hot-Electron System in InSb	349
III.	Far-Infrared Study of the Exciton System	377
IV.	Related Studies	399
	Appendix: The Functional Forms in the Variational Calculation	411
	References	414
	INDEX	417
