PREFACE	xi
CONTENTS OF OTHER VOLUMES	xiii

Chapter 1 **Continuous-Wave Optically Pumped Lasers** *Thomas A. DeTemple and Edward J. Danielewicz*

I. Introduction	1
II. System Characteristics	2
III. Laser Kinetics	6
IV. Molecular Systems	23
V. Conclusions	36
References	37

Chapter 2 **Optically Pumped Mid-Infrared Molecular Gas Lasers** *R. G. Harrison and P. K. Gupta*

I. Introduction	43
II. General Features of OPMLs	45
III. Experimental Considerations	56
IV. Specific Types of OPMLs	70
V. Theoretical Aspects of OPMLs	91
VI. Conclusions	113
References	114

Chapter 3 **On the Optimization of Optically Pumped Far-Infrared Lasers** *Konrad Walzer*

I. Introduction	119
II. Optimization by Changing Resonator Parameters	126
III. Optimization by Application of the Stark Effect	136
IV. Optimization by Addition of Buffer Gases	140

V.	Optimization by Changing the Temperature of the Laser Gas	140
VI.	Conclusion	155
	Appendix	157
	References	160
Chapter 4	Submillimeter Lasers with Electrical, Chemical, and Incoherent Optical Excitation	
	<i>J. P. Pichamuthu</i>	
I.	Introduction	166
II.	Laser Level Assignment	167
III.	The Hydrogen Cyanide Laser	171
IV.	The Water Vapor Laser	194
V.	Optically Pumped Submillimeter CH_3F Laser	216
VI.	Summary and Conclusion	237
	References	241
Chapter 5	Generation of Tunable Laser Sidebands in the THz Region by Frequency Mixing of the HCN Laser and a Microwave Source in a Metal–Semiconductor Diode	
	<i>D. D. Bičanić</i>	
I.	Introduction	245
II.	Instrumentation	252
III.	Experimental Results	277
IV.	Closing Remarks and Outlook	294
	References	297
Chapter 6	Semiconductor Raman and Brillouin Lasers for Far-Infrared Generation	
	<i>J. Nishizawa and K. Suto</i>	
I.	Introduction	301
II.	Experiments and Results	302
III.	Conclusion	320
	References	320
Chapter 7	The Orottron	
	<i>Donald E. Wortman and Richard P. Leavitt</i>	
I.	Introduction	322
II.	Properties of the Open Resonator	325
III.	Linear Bunching Theory	330
IV.	Nonlinear Bunching Theory	339
V.	Summary of Previous Experimental Results	347
VI.	Design of the HDL Orottron Experiment	349

VII.	Results of the HDL Orottron Experiment	357
VIII.	Recent Theoretical and Experimental Results	368
IX.	Summary and Prospects	371
	References	373
Chapter 8	High-Frequency Gyrotrons and Their Application to Tokamak Plasma Heating <i>K. E. Kreischer and R. J. Temkin</i>	
I.	Introduction	337
II.	Constraints on an ECR-Heated Reactor	382
III.	Linear Theory of a Gyrotron	388
IV.	Design of an Electron Cyclotron Maser with an Optical Resonator	418
V.	Design Study of an Electron Cyclotron Resonance Heating System	439
VI.	Conclusions	470
	Appendix A. Derivation of the Interaction Integral	472
	Appendix B. Gyrotron Model	476
	References	482
Chapter 9	Theoretical Investigation of the Application of Quasi-Optical Open Resonators to the Electron Cyclotron Maser <i>John L. Vomvoridis, P. Sprangle, and W. M. Manheimer</i>	
I.	Introduction	488
II.	Coparallel Arrangement	496
III.	Transverse Arrangement	511
IV.	Summary and Prospects	532
	References	534
Chapter 10	Mode Competition and Stability Analysis of the Gyrotron Oscillator <i>D. Dialetis and K. R. Chu</i>	
I.	Introduction	537
II.	Formalism	540
III.	Conditions for Steady State and Stability	549
IV.	Results	567
V.	Summary and Discussion	575
	References	580
