PREFACE	xi

## Chapter 1 **Infrared Optoacoustics** *S. Perkowitz and G. Busse*

I. Introduction	1
II. Optoacoustics and Infrared Fourier Spectroscopy	4
III. Optoacoustics and Optically Pumped Far-Infrared Gas Lasers	14
IV. Remote Optoacoustic Detection: Photothermal Infrared Radiometry	21
V. Future Trends in Infrared Optoacoustics	30
References	31

## Chapter 2 **Theory on Distributed Feedback Lasers with Weak and Strong Modulations** *S. Gnepf and F. K. Kneubühl*

I. Introduction	35
II. Wave Equation	38
III. Infinite DFB Structures	41
IV. Semi-Infinite DFB Structures	51
V. Finite DFB Structures	55
VI. Conclusions	71
Appendix A: Identities of Reflection and Transmission Coefficients	72
Appendix B: Derivation of the Resonance Condition	72
References	73

## Chapter 3 **Freestanding Fine-Wire Grids for Use in Millimeter- and Submillimeter-Wave Spectroscopy** *W. G. Chambers, T. J. Parker, and A. E. Costley*

I. Introduction	78
II. Theories of Scattering	79
III. Construction of Wire Grids	86
IV. Comparison of Calculated and Measured Performance	88
V. Applications	100

VI. Future Developments	102
Appendix: Calculated Characteristic Curves for Grid Performance in Various Configurations	103
References	106
 <b>Chapter 4 Mean Distance between Impurity Ions in Solid-State Devices, Signal Vectors in Communication Theory, and Stars in the Solar Neighborhood</b>	
<i>M. V. Schneider and M. J. Gans</i>	
I. Introduction	107
II. Probability Calculation	110
III. Monte Carlo Method	115
IV. Spacing of Impurities in Solid-State Devices	118
V. Application to Communication Theory	121
VI. Application to Stellar Statistics	123
VII. Conclusions	125
Appendix A: The $l$ th Nearest Neighbor in an $M$ -Dimensional Space	125
Appendix B: "NEWSTAR3"	129
Appendix C: "NEIGHBORS7"	136
References	146
 <b>Chapter 5 Population Inversion and Far-Infrared Emission of Hot Electrons in Semiconductors</b>	
<i>A. A. Andronov</i>	
I. Introduction	150
II. Bulk Ballistic Heating and Population Inversion of Hot Carriers in Semiconductors	151
III. Processes of FIR Emission by Hot Carriers	158
IV. Investigation of Hot Carriers in Germanium by Spontaneous FIR Emission	162
V. Tunable Stimulated Millimeter and FIR Emission by Hot Carriers in Germanium	168
VI. Hot-Electron Intervalley Transfer and Submillimeter Waves	179
VII. Concluding Remarks	183
References	185
 <b>Chapter 6 Far-Infrared Optical Properties of Quenched Germanium</b>	
<i>Takeshi Hattori, Akiyoshi Mitsuishi, and Yoichi Kamiura</i>	
I. Introduction	189
II. Acceptor in Germanium	190
III. Photothermal Ionization Spectroscopy	194
IV. Sample Preparation and Results of Hall-Effect Measurement	197

	CONTENTS	vii
V.	Far-Infrared Optical Properties	199
VI.	Model	214
VII.	Application	215
VIII.	Summary and Conclusion	216
	References	218
	INDEX	221
