CHAPTER	PAGE
I. Historical	1
1. General Development of Physical Science	1
2. The Development of Electricity and Magnetism	8
a. Static Period	8
b. Current Period	8
c. Electrotechnical or Instrumental Period	8
d. Systematic Period	9
e. Atomic Period	9
f. Quantum Period	9
g. Wave Mechanics Period	9
h. Nuclear Period	10
TI M. D. D. W. S. S. W. S.	
II. THE PHENOMENA OF MAGNETISM	11
3. The Discovery of Magnetism	11
4. The Discovery of the Compass	12
5. The Qualitative Phenomena of Magnetism	14
III. THE QUANTITATIVE TREATMENT OF MAGNETIC FORCES	28
6. The Concept of the Magnetic Field	28
7. Definitions of Unit Pole and Pole Strength — Coulomb's Law	
8. Units and Dimensions	
9. Dimensions of Magnetic Pole Strength	
10. Application of Law of Force to Special Cases	
10. Application of Law of Force to Special Cases	33
IV. THE ABSOLUTE DETERMINATION OF POLE STRENGTH AND MAGNETIC	;
FIELDS. THE EARTH'S FIELD — FIELD CONVENTIONS	40
11. The Absolute Determination of Pole Strength and Magnetic	
Fields	
12. Experiment I: <i>M/H</i>	
13. Experiment II: MH	
14. Note on the Use of Oscillating Systems in Measuring Field	
15. The Earth's Magnetic Field	
16. Conventional Representation of Fields of Force	
10. Conventional Representation of Fields of Force	- 41
V. Electric Currents	. 51
17. Historical Sketch	. 51
18. Magnetic Field of a Current	. 52
19. Ampère's Rule and Definition of Unit Current	. 53
20. Alternative Definition of Unit Current	
21. Definition of Quantity in Electromagnetic System of Units	
22. Applications of Ampère's Law	
23. The Tangent Galvanometer	
G .	
VI. POTENTIAL DIFFERENCE AND WORK IN AN ELECTRIC CIRCUIT	
24. The Concept of Potential	
25. The Absolute Electromagnetic Unit of Potential	. 69

CHAPTER		PAGE
	26. The Definition of Electrical Power Consumption	72
	27. The Concept and Definition of Electrical Resistance	73
	28. Joule's Law of Heating	74
VII. F	LECTRIC CURRENTS AND RESISTANCE	76
	29. Nature of Resistance and Its Variation	76
	30. Resistance and Temperature	80
	31. Combination of Resistances in Series and in Parallel	82
•	32. Comparison of Potentials and the Determination of Electro-	
	motive Forces by Means of the Potentiometer	84
	33. Potential and Electromotive Forces in Circuits	86
VIII. C	GENERALIZATION OF OHM'S LAW	90
	34. Kirchhoff's First Law of Divided Circuits	90
	35. Kirchhoff's Second Law of Divided Circuits	91
	36. The Use of the Wheatstone Bridge	94
	37. Note on the Solution of Kirchhoff's Law Equations	95
	38. Short-cut Methods for the Solutions of Complicated Circuits:	
	Maxwell's Method and Method of the Equivalent Y	99
IX. E	ELECTRICAL MEASURING INSTRUMENTS	103
	39. Moving-Coil or d'Arsonval Galvanometer	103
	40. The Galvanometer Constant	105
	41. Types of Galvanometers, Ammeters, and Voltmeters	108
*	42. Shunts for Ammeters, Series Resistance for Voltmeters	111
	43. The Wattmeter	113
X. I	LIQUID CONDUCTORS I: ELECTROLYSIS	115
	44. Types of Conduction and Faraday's Laws	115
	45. Atomic Structure and Conduction in Solution	119
XI. I	LIQUID CONDUCTORS II: BATTERIES	137
	46. Solution Tension	137
	47. Solution Pressure	137
	48. Equilibrium	137
	49. The Concentration Cell	140
	50. The Copper Cell or Daniell Cell	141
	51. The Acid Cell	141
	52. Polarization	143
	53. Calculation of the Approximate E.M.F. of a Cell	143 146
	54. Cautions in Electroplating	146
	56. Dry Cells.	149
	57. Standard Cell	149
	58. Most Efficient Arrangement of Cells	150
yır 1	Thermoelectricity	154
2111. 1	59. The Peltier and the Seebeck Effects	154
	60. Thermoelectric Power and the Calculation of Thermal	
	E.M.F's.	157
	61. Uses of Thermocouples	165

CHAPTER	PAGE
XIII. STATIC ELECTRICITY I: CHARGES AND FIELDS	169
62. Electrification and Its Detection	169
63. Electrostatic Induction	170
64. One- and Two-Fluid Theories of Electricity	171
65. Consequences of Induction: The Ice-Pail Experiment	172
66. Uses of Induction	173
67. Quantitative Treatment: Coulomb's Law	175
68. Definition of Current in the Electrostatic System	180
69. Definition of Electric Field Strength	181
XIV. STATIC ELECTRICITY II: POTENTIAL	183
70. The Concept of Potential Difference in the Electrostatic	
System	183
71. Definition of the Electrostatic Unit of Potential Difference	184
72. Further Discussion of the Concept of Potential Difference	184
73. Charge Density and Its Applications	191
74. The Absolute Electrometer	194
75. Gold-Leaf Electroscope	196
76. Quadrant Electrometer	197
XV. STATIC ELECTRICITY III: CAPACITY	199
77. Definition of Capacity and the Units of Capacity	199
78. Capacity of the Spherical Condenser	202
79. The Dielectric Constant, Dielectric Polarization, and Hysteresis	202
80. The Capacities of Parallel-Plate and Cylindrical Condensers	203 215
81. Uses of Condensers, Energy of Charge, Energy in the Electro-	
static Field, Condensers in Series and in Parallel	218
XVI. Electromagnetics	226
82. Definition of Current and Work Done in Moving a Conductor	
in a Field	226
83. Field in an Infinitely Long Solenoid	227
84. Interactions between Fields and Conductors Carrying Cur-	
rents	230
XVII. MAGNETIC PROPERTIES OF MATERIALS	236
85. The Manner of Regarding a Piece of Iron in a Magnetic	
Field	236
86. The Curve of Magnetization and Hysteresis	238
87. The Magnetic Behavior of Atoms: Paramagnetism, Diamag-	
netism, and Ferromagnetism	245
88. Diamagnetic Action	248
89. The Existence of Ampère's Molecular Magnets, the Magne-	
ton, the Quantization of Atomic Magnets, Paramagnetic and Ferromagnetic Behavior in Solids, Gases, and Metals	
and refromagnetic behavior in solids, Gases, and Metals	253
XVIII, THE MAGNETIC CIRCUIT	266
90. Concept of Magnetomotive Force and Definition of Reluc-	
tance	266

xvi CONTENTS

CHAPTER	PAGE
91. The Value of Reluctance	267
92. Demagnetization, Leakage, Stray Flux, Effect of Air Gaps,	
Electromagnets, Lifting Power of Magnets	273
XIX, INDUCED ELECTRIC CURRENTS	278
93. Description of Induced Currents, Lenz's Law, Direction of	
Induced E.M.F	278
94. Electromagnetic Induction as a Consequence of Electron	
Theory	279
95. Magnitude of Induced E.M.F	281
96. Definition of E.M.U. of Potential	282
97. E.M.F. Produced by Cutting Lines of Force	282
98. Principle of the Earth Inductor	283
99. Application of Electromagnetic Induction to a Secondary	
Coil about a Primary in Which the Current Changes	285
100. Application of Electromagnetic Induction to Faraday's Disk	288
XX. SIMPLE DYNAMOS AND MOTORS	290
101. Derivation of Equation for Simple Dynamo	290
102. Dynamos, Alternating Current, and Direct Current	291
103. E.M.F. and P.D. from a Dynamo, Efficiency of a Dynamo	293
104. Reciprocal Relations between Dynamos and Motors	295
105. Power Consumption, Efficiency, and Torque for Motors	296
106. Starting Boxes	298
XXI, Induction	299
107. Self-Induction	299
108. Units of Self-Induction	302
109. Nature of Self-Induction	303
110. Mutual Induction	304
111. Energy of the Electromagnetic Field of a Current	310
112. Self-induction and Energy Losses, Eddy Currents	314
113. The Induction Coil	316
114. The Transformer	318
XXII. ELECTRICAL AND MAGNETIC MEASUREMENTS	321
115. Introduction	321
116. Magnetic Measurements	322
117. Summary of Methods of Magnetic Measurement	325
118. Current Measurement	325
119. Summary of Current Measurement	328
120. Potential Measurement	328
121. Summary of Potential Measurements	332
122. Resistance Measurement	333
123. Summary of Resistance Measurements	335
124. Capacity Measurement	335
125. Summary of Capacity Measurement	337
126. Self-Induction Measurement	338
127. Summary of Measurements of Self-induction	339
128. Power Measurement	340

CONTENIO	WAII

CHAPTER	PAGE
XXIII. THE BALLISTIC GALVANOMETER — TRANSIENT PHENOMENA	341
129. The Ballistic Galvanometer	341
130. Derivation of the Equation of the Ballistic Galvanometer	342
131. The Fluxmeter	343
132. Damping	346
133. Transient Phenomena	
134. Measurement of High Resistances	362
XXIV. ALTERNATING CURRENTS I: DEFINITIONS, ROOT MEAN SQUARE	
Averages, and Effect of Self-Induction	
135. The Importance of Alternating Current	
136. Definitions of Alternating-Current Terms137. Values of Currents Given by Instruments, Root Mean	
Square Current	
138. Effect of Self-Induction on an Alternating E.M.F	
XXV. ALTERNATING CURRENTS II: EFFECT OF CAPACITY ON ALTERNATING CURRENT AND THE EFFECT OF CAPACITY AND SELF-INDUC-	
TION COMBINED — ELECTRICAL OSCILLATIONS	
139. Effect of Capacity on the Impedance of an Alternating Cur-	
rent	375
140. Where Self-Induction, Capacity, and Resistance Are Present	378
141. Power Factor	379
142. Electrical Oscillations	381
143. Derivation of the Equation for Oscillatory Discharge of a Condenser with Resistance Capacity and Self-Induction.	
XXVI. THE RATIO OF ELECTROMAGNETIC AND ELECTROSTATIC UNITS, MAX- well's Equations and Electromagnetic Waves, and the Char- acter of Electrical Units and Their Dimensions	390 390 390
145. The Ratio of the Electrostatic and Electromagnetic Systems	
of Units	
B. MAXWELL'S EQUATIONS AND ELECTROMAGNETIC WAVES	
146. Introduction	
147. The Equations of Continuity	
149. Maxwell's Displacement Current	
150. The Generalizations of Faraday's Laws of Electromagnetic	
Induction	
151. Derivation of the Wave Equation	
152. Solution of the Wave Equation	
C. THE IMPORTANT ELECTRICAL CONCEPTS, THEIR UNITS AND INTER-	
RELATIONS, AND THE PROBLEM OF THEIR DIMENSIONS	
153. Important Concepts	
154. Table of Auxiliary Concepts	
155. Systems of Electrical and Magnetic Units	417
XXVII. DISCHARGE THROUGH GASES AND ATOMIC STRUCTURE	
156. Discovery of X-Rays	
157. Cathode Rays	420
