

CONTENTS

Preface	vii
Principal Symbols and Conventions	ix
Chapter 1 INTRODUCTION	1
Chapter 2 DERIVATION	7
Chapter 3 SOME APPLICATIONS OF THE NETWORK THEOREMS	15
Chapter 4 HUYGENS' PRINCIPLE	23
4.1 Introductory	23
4.2 A Mutual-impedance Formula	25
4.3 Diffraction by a Metal Sheet	32
4.4 Groundwave Propagation	35
4.5 Slots and Networks	41
4.6 Rumsey's Reaction Concept	45
Chapter 5 PERTURBATION METHODS	47
5.1 Introductory	47
5.2 Network Theorem	48
5.3 A Volume Integral Formula	57
5.4 A Surface Integral Formula	67
Chapter 6 SURFACE IMPEDANCE	69
6.1 General	69
6.2 The Plane Surface of a Semi-infinite Homogeneous Medium	70
6.3 Inhomogeneous Media	73
6.4 Application of Surface Impedance to Perturbation Methods	80
Chapter 7 APPLICATIONS OF SURFACE INTEGRAL PERTURBATION FORMULAE	82
7.1 Waveguides	82
7.2 Effect of the Ground on the Impedance of an Aerial	87
7.3 Effect of an Earth System on Radiation from an Aerial	95
Chapter 8 PERTURBATION METHODS APPLIED TO GROUNDWAVE PROPAGATION	101
8.1 Introductory	101
8.2 Reflection at a Boundary	102
8.3 Propagation over a Plane Inhomogeneous Earth	105

8.4 Propagation over an Inhomogeneous Earth of Varying Curvature	113
8.5 Scattering of a Groundwave by an Irregular Surface	117
Chapter 9 A PERTURBATION METHOD BASED ON GREEN'S THEOREM	122
Chapter 10 RECIPROCAL AND NON-RECIPROCAL MEDIA	127
10.1 Anisotropic and Optically Active Reciprocal Media	127
10.2 Non-reciprocal Media	130
References	138
Name Index	143
Subject Index	145
