FOREWORD - Prof J R James	vii
PREFACE	ix
<u>PART I: THEORETICAL BACKGROUND</u>	
1. INTRODUCTION - A PRELIMINARY SURVEY - J Moore and R Pizer	3
1.1 Mathematical and Modelling Simplifications	3
1.1.1 Time-harmonic quantities	4
1.1.2 Wire-grid modelling	7
1.2 Moment Methods	8
1.3 Other Approaches	10
1.4 Plan of the Monograph	11
References	15
2. INTEGRAL REPRESENTATIONS IN ELECTROMAGNETISM - R Pizer	17
2.1 Introduction	17
2.2 Maxwell's Equations	17
2.3 Homogeneous Materials Assumption	19
2.4 Helmholtz's Equations for Potentials	19
2.5 Solutions of Helmholtz's Equations for Good Conductors	20
2.6 Boundary Conditions	21
2.7 Thin-Wire Approximation	21
2.8 Currents due to Plane-Wave Excitation	22
2.9 Equation for the Currents	23
2.10 Pocklington's Integral Equation	23
2.11 Hallén's Equation	24
2.12 Equations Based on the Reaction Technique	24

	<u>Page</u>	
2.13	Finite-Element Schemes	27
2.14	Magnetic Field Integral Equation	29
2.15	Problems with a Conducting Half Space	30
	2.15.1 Special case of a vertical electric dipole	31
	2.15.2 Special case of a horizontal electric dipole	32
	2.15.3 Integral representations	33
	2.15.4 Solution for the electric dipole	35
	References	36
3.	MOMENT-METHOD SOLUTION - R Pizer and J Moore	39
3.1	Introduction	39
3.2	Representation of the Currents	40
3.3	Choice of Weighting Function	40
3.4	Form of Impedance Matrix	43
3.5	Numerical Evaluation of Matrix Elements	44
3.6	Numerical Evaluation of Voltage Vector	50
3.7	Matrix Factorisation	50
3.8	Calculation of Electric Fields	51
3.9	Radar Cross-Sections	53
3.10	Computer Storage and Time Limitations	53
3.11	Solution in the Time Domain	54
3.12	Patches	55
3.13	Computer Programs Used in this Monograph	58
	3.13.1 CHAOS and others	58
	3.13.2 The RAE computer program	58
	3.13.3 The Numerical Electromagnetic Code (NEC)	62
	References	63
4.	TREATMENT OF WIRE JUNCTIONS - R Pizer	67
4.1	Introduction	67
4.2	Chao and Strait's Method	69
4.3	Sayre's Method	69
4.4	50/50 Method	70
4.5	Other Methods	71
4.6	Effects on Impedance Matrix Elements	71
4.7	Methods Used in the CHAOS Program	73
	References	74

	<u>Page</u>
<u>PART II: APPLICATIONS</u>	75
5. SCATTERING BY SINGLE WIRES - J Moore and R Pizer	77
5.1 Introduction	77
5.2 The Convergence of the Moment Method for Single Wires	78
5.2.1 Segmentation and equivalent length	78
5.2.2 Obtaining converged results from a coarse segmentation	90
5.2.3 Variation of $\beta$ with radius for CHAOS	91
5.2.4 A similar mechanical problem	92
5.2.5 Convergence in NEC and AMP	93
5.3 The $4\pi$ Mean	94
5.4 Comparison with van Vleck's Analytical Treatment	95
5.5 Other Comparisons	96
5.6 Conclusions	100
References	100
6. SCATTERING BY WIRE STRUCTURES - R Pizer and J Moore	103
6.1 Introduction	103
6.2 A Wire Frame Tetrahedron	103
6.3 A Rectangular Mesh	106
6.4 Mesh Modelling of Continuous Surfaces	107
6.5 Wire-Mesh Discs	108
6.5.1 Severin's data	108
6.5.2 Hey's data	110
6.5.3 Bechtel's data	112
6.5.4 Conclusions	117
Acknowledgments	117
References	117
7. CURRENTS INDUCED ON CYLINDRICAL STRUCTURES BY A PLANE ELECTROMAGNETIC WAVE - J Moore and T W Armour	119
7.1 Introduction	119
7.2 Computer Programs Used in the Modelling Studies	121
7.3 The Experimental Programme	123
7.4 Mathematical Models	125
7.5 Current Density Distribution	127
7.6 Results: Prediction and Measurement	130
7.6.1 Birdcage and dustbin	132
7.6.2 Dumb-bell	140
7.6.3 The long cylinder	141
7.7 Form of Current Distribution over a Squat Cylinder	141
7.7.1 Comparison with Perala's calculations	143
7.7.2 Cavity resonance	148

(xiv)

	<u>Page</u>	
7.8	Comparison with Calculations of Kao for a Short Open-Ended Cylinder	148
7.9	Conclusions	149
	References	153
8.	CURRENTS INDUCED ON AIRCRAFT BY A PLANE ELECTRO- MAGNETIC WAVE - F G L Garthwaite and T W Armour	155
8.1	Introduction	155
8.2	The Wire-Grid Model of the F111	156
	8.2.1 Measurement compared with prediction by CHAOS and THREDE	157
8.3	The Wire-Grid Model of the Jaguar	161
8.4	Some General Comments	161
8.5	Summary and Conclusions	162
	References	163
9.	WIRE-GRID MODELLING OF APERTURES AND CAVITIES - T W Armour and F G L Garthwaite	165
9.1	Introduction	165
9.2	Method	166
9.3	Wire-Grid Modelling Compared with Classical and Numerical Analysis	167
9.4	Summary and Conclusions	174
	References	175
10.	ANTENNAS MOUNTED ON AIRCRAFT - J I R Owen and D H Forgan	177
10.1	The Need for a Computer Program	177
10.2	Representation of Antenna Sources	179
10.3	Derivation of the Wire-Grid Structure	179
10.4	Comparisons of Program Predictions with Experimental Data	181
10.5	Comparisons between Computer Programs	190
	10.5.1 Monopole on a sphere	190
	10.5.2 Aircraft with HF notch antennas	192
10.6	Conclusions	195
	References	196
11.	ANTENNAS MOUNTED ON VEHICLES ON AN IMPERFECT GROUND PLANE - D J Brammer and D Williams	197
11.1	Introduction	197
11.2	Moment Methods Used	198
11.3	Imperfect-Ground Effects	200

	<u>Page</u>
11.3.1 The Sommerfeld integral	200
11.3.2 The reflection coefficient approximation	203
11.3.3 Error tolerance	204
11.3.4 Comparison of methods	205
11.4 Impedance of Monopole Antennas on Vehicles	208
11.4.1 Idealised model description	208
11.4.2 Wire-grid and surface-patch modelling using NEC	209
11.4.3 Network-analyser experiments	210
11.4.4 Results and comparisons	211
11.4.5 Guidelines for impedance determination	215
11.5 Conclusions	216
References	216
12. TREATMENT OF IMPERFECT CONDUCTORS AND DIELECTRICS - R Pizer and J Moore	219
12.1 Introduction	219
12.2 Types of Current	220
12.3 Impedance of Wire	221
12.4 Form of Matrix of Contributions due to Finite Conductivity	224
12.5 Lumped Loads	224
12.6 Impedance Boundary Condition	225
12.7 Single Wires of Finite Conductivity	226
12.8 A Column of Salt Water	228
12.9 Polystyrene Rods	230
12.10 An Empirical Model for the Resistance and Inductance of Carbon Filaments	231
12.10.1 CCM-56 fibre	231
12.10.2 Green carbon	233
12.10.3 Conclusions	234
12.11 Dielectric Slabs	235
12.11.1 Glass ceramic	235
12.11.2 Comparison with experiment	238
12.11.3 Theoretical model	240
12.12 Wire-Grid Modelling of Highly Conducting Surfaces - Another Look	241
12.13 Summary and Conclusions	243
References	244
<u>PART III: EFFICIENT COMPUTATIONAL TECHNIQUES, APPROXIMATIONS, AND A FINAL SUMMARY</u>	
	245
13. EXPLOITATION OF SYMMETRY - R Pizer, J Moore and D A Moody	247
13.1 Introduction	247

(xvi)

	<u>Page</u>	
13.2	Rotational Periodicity about an Axis	247
13.3	One Plane of Mirror Symmetry	253
	13.3.1 Symmetric impedance matrix	253
	13.3.2 Unsymmetric impedance matrix	255
	13.3.3 Special case for an antenna above a perfectly conducting ground plane	256
13.4	Two Planes of Mirror Symmetry	256
13.5	The Radar Cross-Section of a Cylinder	260
13.6	Summary and Conclusions	268
	References	269
14.	MATRIX ITERATION - J Moore	271
14.1	Introduction	271
14.2	Method	272
	14.2.1 Basic iterative scheme	272
	14.2.2 Saving computing time	273
	14.2.3 Saving main store and computing time	274
	14.2.4 Stopping criterion	276
14.3	Convergence	277
	14.3.1 Condition for convergence	277
	14.3.2 Determination of $\lambda_1$	277
	14.3.3 Improving convergence. Extrapolation	278
	14.3.4 An optimum stopping criterion for $\lambda_1$ determination	280
14.4	A Physical Interpretation	281
14.5	Examples	283
	14.5.1 Iteration through the frequency domain	283
	14.5.2 Twenty-five parallel wires. A storage- saving example	287
	14.5.3 An example illustrating extrapolation	288
14.6	Summary and Conclusions	289
	References	290
15.	THE SPARSE-MATRIX APPROXIMATION - R Pizer and J Moore	291
15.1	Introduction	291
15.2	Results of Calculations	292
	15.2.1 Long thin straight wires	292
	15.2.2 A tetrahedron frame of copper wire	296
	15.2.3 A tetrahedron frame of carbon struts	300
	15.2.4 A disc	300
15.3	Use of Iteration	302
	15.3.1 Fill-in on factorisation	302
	15.3.2 Iteration scheme	303
	15.3.3 Sorting the matrix	305
	15.3.4 Tetrahedron example	305

	<u>Page</u>
15.4 Summary and Conclusions	309
References	310
16. APPROXIMATIONS BASED ON SIMPLIFIED INTERACTIONS BETWEEN WIRES - D A Moody	311
16.1 Introduction: the Independent- and Connected-Wire Approximations	311
16.2 General Considerations	313
16.3 Structure of the Impedance Matrix	314
16.4 Illustrative Test Problems with CHAOS-CHUCK	316
16.4.1 Models for the test problems	316
16.4.2 Results for two-wire junctions	318
16.4.3 Results for three-wire junctions	325
16.4.4 Current distribution due to the junction effect	328
16.4.5 Conclusion from the test problems	329
16.5 Efficient Matrix Manipulation Schemes	330
16.5.1 Matrix manipulation for the Independent- Wire Approximation	330
16.5.2 Matrix manipulation for the Connected- Wire Approximation for linear wire geometries	332
16.5.3 Matrix manipulation for the Connected-Wire Approximation for general wire scatterers	338
16.5.4 Improving the Connected-Wire Approximation by including spatial coupling	348
Acknowledgment	356
17. CONSTRUCTING A MOMENT-METHOD COMPUTER CODE - R Pizer	357
Reference	361
<u>GLOSSARY OF SYMBOLS</u>	363
<u>INDEX</u>	387
