

CONTENTS

*ONE: VECTOR ANALYSIS	1
1.1 Properties of Vectors and Coordinate Systems	1
1.1.1 Base Vectors and Coordinate Systems	1
1.1.2 The Scalar Product (Dot Product)	5
1.1.3 The Vector Product (Cross Product)	5
1.2 Elements of Displacement, Area, and Volume; Solid Angle	6
1.2.1 Element of Displacement	6
1.2.2 Element of Surface Area	8
1.2.3 Solid Angle	9
1.2.4 Element of Volume	10
1.3 Gradient	11
1.4 The Divergence of a Vector and Gauss' Theorem	13
1.5 The Curl and Stokes' Theorem	16
1.6 Vector Manipulation of ∇	20
1.6.1 Single Del Operations	20
1.6.2 Double Del Operations	21
1.7 Vector Integral Relations	22
1.8 Summary	25
TWO: ELECTROSTATICS	28
2.1 Electric Charge	28
2.2 Coulomb's Law	29
2.3 Electric Field	31
2.4 Charge Density	33
2.5 Flux and Gauss' Law	38
2.5.1 Integral Form of Gauss' Law	38
2.5.2 Derivative Form of Gauss' Law	43
2.6 Conductors and Insulators	45
2.7 Electric Potential	48
2.8 The Multipole Expansion	58
2.9 Summary	69
THREE: ELECTROSTATIC BOUNDARY VALUE PROBLEMS	73
3.1 Poisson's and Laplace's Equations	73
3.2 Uniqueness of Solutions to Electrostatic Problems	74
3.3 Boundary Conditions	77
3.4 Problems Involving Laplace's Equation	78
3.4.1 Laplace's Equation in One Dimension	79

x CONTENTS

3.4.2	Laplace's Equation in Two Dimensions—Spherical Coordinates	83
3.4.3	Laplace's Equation in Two Dimensions—Cylindrical Coordinates	89
3.4.4	Laplace's Equation in Three Dimensions—Rectangular Coordinates	94
3.5	The Method of Images	97
3.5.1	Point Charge and Plane	97
3.5.2	Point Charge and Sphere	101
3.5.3	Parallel Cylinders	108
3.5.4	Point Charge and Two Conducting Surfaces	113
3.6	Poisson's Equation	113
3.7	Electrostatic Shielding	118
3.8	Summary	120
 FOUR: FORMAL THEORY OF DIELECTRIC ELECTROSTATICS		 126
4.1	Polarization and Dipole Moment Density	126
4.2	Fields Due to a Dielectric Medium	127
4.3	Gauss' Law for Dielectrics	136
4.4	The Equations of Electrostatics Inside Dielectrics	138
4.5	The Electric Constitutive Relations	139
4.6	The Solution of Electrostatic Boundary Value Problems with Dielectrics	143
4.6.1	Uniqueness	144
4.6.2	Boundary Conditions for Dielectric Media	144
*4.7	Method of Images for Dielectric Interfaces	153
4.8	Forces on Charge Distributions	157
4.9	Summary	160
 *FIVE: THE MICROSCOPIC THEORY OF DIELECTRICS		 166
5.1	The Molecular Field	166
5.2	Interaction of Atoms and Molecules with Electric Fields	168
5.2.1	Induced Dipoles	169
5.2.2	Permanent Dipoles	172
5.2.3	Ferroelectricity	176
5.3	Summary	179
 SIX: ELECTROSTATIC ENERGY		 181
6.1	Electrostatic Energy of an Assembly of Point Charges	181
6.2	Electrostatic Energy of a Continuous Charge Distribution	182
6.3	Electrostatic Energy of Conductors; Coefficients of Potential and Capacitance	184
6.4	Capacitors	188
6.4.1	Capacitance of an Isolated Conductor	188
6.4.2	The Two-Conductor Capacitor	189
6.4.3	Combinations of Capacitors	193
6.4.4	Energy Storage in Capacitors	194

6.5	Electrostatic Energy: An Alternative Expression in Terms of the Field Distribution	196
6.6	Self-Energies and Interaction Energies	200
6.7	Forces and Torques Using the Electrostatic Energy	201
6.8	Summary	205
*SEVEN: STEADY CURRENTS		209
7.1	Definition of Electric Current	210
7.2	The Continuity Equation: Local Conservation of Charge	212
7.3	Ohm's Law	213
7.4	Steady Currents	215
	7.4.1 Equations Governing \mathbf{J}	215
	7.4.2 The Boundary Conditions	216
	7.4.3 Boundary Value Problems	223
7.5	The Coefficients of Resistance	229
*7.6	The Method of Images for Currents	230
*7.7	Microscopic Origin of Conduction	232
*7.8	Joule Heating and Batteries	233
*7.9	Kirchhoff's Laws and Resistive Networks	238
7.10	Summary	240
EIGHT: MAGNETISM OF STEADY CURRENTS		244
8.1	The Lorentz Force	244
8.2	Forces on Current Distribution—Motion in Crossed Fields	245
8.3	The Sources of \mathbf{B}	250
8.4	Integral Equations of Magnetostatics and Ampere's Law	251
8.5	The Vector Potential	258
8.6	The Biot–Savart Law	263
8.7	The Magnetic Scalar Potential	267
8.8	Magnetic Effects of a Small Current Loop	273
	8.8.1 The Scalar Potential	273
	8.8.2 Magnetic Moments	274
	8.8.3 The Vector Potential	276
	8.8.4 Localized Current Distributions in an External Magnetic Field	279
8.9	Summary	281
NINE: FORMAL THEORY OF MAGNETISM AND MATTER		287
9.1	Magnetization	287
9.2	The Vector and Scalar Potentials of a Magnetized Material	291
9.3	The Equations of Macroscopic Magnetostatics	295
9.4	The Magnetic Constitutive Relations	296
9.5	Boundary Value Problems	302
	9.5.1 The Potential Equations	302
	9.5.2 The Boundary Conditions on the Fields and the Potentials	303
*9.6	The Method of Images for Magnetic Interfaces	314
*9.7	Magnetic Circuits	317
9.8	Summary	323

*TEN: THE MICROSCOPIC THEORY OF MAGNETISM	329
10.1 The Interaction of Atoms and Molecules with Magnetic Fields	329
10.2 The Origin of Diamagnetism—Induced Dipole Moments	330
10.3 Paramagnetism—Permanent Moments	332
10.4 Ferromagnetism	336
10.4.1 Spin–Spin (Exchange) Interaction	336
10.4.2 The Molecular Field	337
10.4.3 Spontaneous Magnetization	339
10.4.4 The Magnetic Susceptibility of Ferromagnetic Materials Above the Curie Temperature—The Curie–Weiss Law	341
10.4.5 Ferromagnetic Domains	343
10.4.6 Antiferromagnetism and Ferrimagnetism (Ferrite)	344
10.5 Summary	345
*ELEVEN: INDUCTION	348
11.1 Faraday’s Law	349
11.2 Motional EMF	355
11.4 Applications of Faraday’s Law to Circuits: Coefficients of Inductance	361
11.3.1 Mutual Inductance	361
11.3.2 Self-Inductance—Inductances in Series and in Parallel	366
11.4 Summary	370
TWELVE: MAGNETIC ENERGY	373
12.1 A Current Loop Immersed in a Linear Magnetic Material	373
12.2 N Loops Immersed in a Linear Magnetic Medium	374
12.3 Energy Stored in a Magnetic Field in the Presence of Linear Materials	375
12.4 Magnetic Energy in Nonlinear Materials	379
12.5 Forces and Torques Using the Magnetostatic Energy	381
12.6 Summary	387
*THIRTEEN: CIRCUITS WITH NONSTEADY CURRENTS	391
13.1 Definition of Quasi-Static Circuits	392
13.2 Kirchhoff’s Circuit Laws	393
13.3 Time Domain Solutions	395
13.3.1 Series RL Loop	395
13.3.2 Series RC Loop	397
13.3.3 The RLC Loop	400
13.4 Coupled Circuits	405
13.5 AC Circuits—Frequency Domain	407
13.5.1 Phasors—Kirchhoff’s Laws for Phasors	407
13.5.2 The Mesh Law	410
13.5.3 The Nodal Method	411
13.6 Power in AC Circuits—Impedance Matching	414
13.7 Resonance in AC Circuits	417
13.7.1 Series Resonance	417
13.7.2 Parallel Resonance	421
13.8 Summary	427

FOURTEEN: MAXWELL'S EQUATIONS	436
14.1 Displacement Current—Maxwell's Equations	437
14.2 Uncoupling Maxwell's Equations in Linear Media—The Wave Equation	440
14.3 Plane Waves in Nonconducting Media	442
14.3.1 The Wave Phenomenon	442
14.3.2 Interrelationships Between E , B , and \hat{K}	443
14.4 Sinusoidal (Monochromatic) Solutions to Maxwell's Equations	445
14.5 Polarization of Plane Waves	449
14.6 Conservation of Electromagnetic Energy—Poynting's Theorem	452
14.7 Plane Monochromatic Waves in a Conducting Medium	457
14.8 Summary	463
FIFTEEN: RADIATION	468
15.1 Wave Equation of the Potentials with Sources—Gauge Transformations	468
15.2 Retarded Potentials	473
15.3 Spherical Waves and Field Wave Equations—Multipole Expansion for Slowly Moving Distributions	478
15.4 Radiation from Antennas	490
15.4.1 Differential Antennas—Electric Dipole Fields	490
15.4.2 Radiation from a Half-Wave Antenna	494
15.5 Multipole Expansion of the Retarded Potentials—Radiation from Slowly Moving Charges—Electric Dipole	499
15.6 The Lienard–Weichert Potential—Fast-Moving Point Charges	504
15.7 Summary	510
SIXTEEN: ELECTROMAGNETIC BOUNDARY VALUE PROBLEMS	516
16.1 Boundary Conditions on the Fields	516
16.1.1 Special Cases: Normal Component	518
16.1.2 Special Cases: Tangential Component	519
16.2 Propagation Across a Plane Interface of Nonconducting (Dielectric) Materials	520
16.2.1 Normal Incidence	520
16.2.2 Oblique Incidence—Phase Matching	522
16.2.3 Polarization by Reflection and Refraction—Brewster Angle	526
16.3 Propagation Across a Plane Interface of a Conductor and a Dielectric—Complex Fresnel Coefficients	533
16.3.1 Normal Incidence	533
16.3.2 Oblique Incidence	535
16.4 Waveguides and Cavity Resonators	542
16.4.1 Propagation Between Two Conducting Plates (Metallic Mirrors)	543
16.4.2 Waveguides	546
16.4.3 Cavity Resonators	549
16.5 Summary	554
SEVENTEEN: THE SPECIAL THEORY OF RELATIVITY	559
*17.1 Galilean Transformation and the Wave Equation	559
*17.2 Lorentz Transformation	560

*17.3	Postulates of Special Relativity	568
*17.4	Space-Time Geometry (Four-Dimensional Space)—Four-Vectors and Four-Tensors	569
17.4.1	Three-Dimensional Space—Euclidean Space	570
17.4.2	Four-Dimensional Space—Minkowski Space	570
17.4.3	Vector Properties of Four-Dimensional Space	572
17.5	Relativistic Electrodynamics—Covariance of Electrodynamics	577
17.6	Summary	587
APPENDIX I: SYSTEM OF UNITS		591
I.1	Force Laws—Origin of Systems	591
I.2	Electrostatics and Electromagnetic Systems	592
I.3	Gaussian System	593
APPENDIX II: DIVERGENCE, CURL, GRADIENTS, AND LAPLACIAN		596
APPENDIX III: SOME FUNDAMENTAL CONSTANTS OF PHYSICS		598
APPENDIX IV: SOME SI DERIVED UNITS WITH SPECIAL NAMES		599
ANSWERS TO ODD-NUMBERED PROBLEMS		601
INDEX		611
