CONTENTS

Chapter 1	COMPLEX RESISTIVITY OF THE EART	H 1
1.1	Preliminary Theory	3
1.2	Complex Resistivity Concept	23
1.3	Resistivity and I.P. Response for an Electrode	
	Near an Interface	60
1.4	Low Frequency Electromagnetic Response	78
1.5	I.P. Response of Prolate Spheroidal Ore Grains	101
1.6	Response of Disperse Systems for Simple Particles	125
1.7	Generalizations of the Spheroidal Model	135
1.8	The Electrochemical Perspective	149
	Appendix – Thin Sheet Boundary Conditions	159
	Additional I.P. References	166
	Epilogue	173
Chapter 2	SYNTHESIS OF OPTIMUM MICROWAV ANTENNA APPLICATORS FOR USE IN TREATING DEEP LOCALIZED	E
	TUMORS	175
2.1	TUMORS Electromagnetic Power Deposition in Lossy Media	175
2.1	TUMORS Electromagnetic Power Deposition in Lossy Media and Hyperthermia	175 176
2.1 2.2	TUMORS Electromagnetic Power Deposition in Lossy Media and Hyperthermia Optimal Source Distribution for Spherical	175 176
2.1 2.2	TUMORS Electromagnetic Power Deposition in Lossy Media and Hyperthermia Optimal Source Distribution for Spherical Tissue Geometry	175 176 194
2.1 2.2 2.3	TUMORS Electromagnetic Power Deposition in Lossy Media and Hyperthermia Optimal Source Distribution for Spherical Tissue Geometry Optimal Power Deposition in a Planar Slab	175 176 194 207
2.1 2.2 2.3 2.4	TUMORS Electromagnetic Power Deposition in Lossy Media and Hyperthermia Optimal Source Distribution for Spherical Tissue Geometry Optimal Power Deposition in a Planar Slab Optimal Power Deposition in a Circular Cylinder	175 176 194 207 223
2.1 2.2 2.3 2.4	TUMORS Electromagnetic Power Deposition in Lossy Media and Hyperthermia Optimal Source Distribution for Spherical Tissue Geometry Optimal Power Deposition in a Planar Slab Optimal Power Deposition in a Circular Cylinder Acknowledgments	175 176 194 207 223 233
2.1 2.2 2.3 2.4	TUMORS Electromagnetic Power Deposition in Lossy Media and Hyperthermia Optimal Source Distribution for Spherical Tissue Geometry Optimal Power Deposition in a Planar Slab Optimal Power Deposition in a Circular Cylinder Acknowledgments References	175 176 194 207 223 233 233

	Relations	243
3.3	Pair Distribution Functions for Media with	
	Particles of Multiple Sizes	251
3.4	Effective Propagation Constants for Media	
	with Small Particles	258
3.5	Effective Propagation Constants for Media	
	with Moderate Size Particles	269
3.6	Energy Conservation and Ladder Approximation	
	for Dense Media with Multiple Species	285
3.7	Conclusion	291
	References	292
Chapter 4	SCATTERING FROM RANDOMLY	
	PERTURBED PERIODIC AND	
	QUASIPERIODIC SURFACES	297
4.1	Introduction	297
4.2	Scattering by a Randomly Perturbed	
	Periodic Surface	299
4.3	Scattering by a Randomly Perturbed	
	Quasiperiodic Surface	319
	Appendix A. Zeroth-Order Equation	
	and Solution	341
	Appendix B. First-Order Equation	-
	and Solution	343
	Appendix C. Second-Order Equation	
	and Solution	346
	Appendix D. Narrow-Band Gaussian	
	Random Process	351
	Appendix E. Calculations of $ \langle I \rangle ^2$ and D_I	352
	Acknowledgments	356
×	References	356
Chapter 5	RADIATIVE TRANSFER THEORY FOR	
	ACTIVE REMOTE SENSING OF	
	TWO-LAYER RANDOM MEDIUM	359
5.1	Introduction	359
5.2	Two-Layer Random Medium with	

Conten	ts
--------	----

	Planar Interfaces	362
5.3	Two-Layer Random Medium with	
	Rough Interfaces	384
5.4	Summary	400
	Appendix A. Scattering Function Matrix,	
	Scattering Coefficient, and Absorption	
	Coefficient for the Random Medium	401
	Appendix B. Coupling Matrices for	
	Stokes Parameters at Planar Dielectric Interface	403
	Appendix C. Fourier Series Expansion of	
	the Scattering Function Matrix	404
	Appendix D. Expressions for Coupling	
	Matrices Obtained using Geometrical	
	Optics Solution	405
	Appendix E. Application of Legendre	
	Quadrature Formula to the Boundary Conditions	407
	Acknowledgments	412
	References	412
