Preface			хі
Chapter	1	Introduction	1
Chapter	2	The Basic Field Equations	7
		Introduction	7
		Electrostatics	7
		Conservation of Charge	10
			10
		Displacement Current	11
		Electromagnetic Induction	15
		The Field Equations	15
		Problems	17
Chapter	3	Potentials	18
_		Tetroduction	10
		The Retarded Rotentials	18
		The Coulomb Gauge	20
		Problems	20 21
Chapter	4	Multipole Moments	22
-		- Turkur d	22
		The Electric Dipole	22
		The Electric Multipoles	22
		The Magnetic Dipole	23
		The Multipole Potentials	24
		The Dipole Fields	26
		Time-dependent Potentials	28
		The Energy of a Dipole in a Field	29
		Problems	30
			v

Chapter	5	Microscopic and Macroscopic Fields	32
		Introduction	32
		The Microscopic Fields	33
		Truncation	34
		Truncation and Averages	37
		Summary	38
		Problems	. 39
Chapter	6	Ensemble Averages	41
		Ensembles	41
		Differentiation	42
		Retardation	43
		Charge and Current Densities	43
		Fluctuations	44
		Summary	45
		Problems	46
Chapter	7	Macroscopic Equations of Motion	47
		The Nature of a Macroscopic Equation of Motion	47
		Truncated Equations	49
		Problem	54
Chapter	8	Continuous Media	55
		Introduction	55
		The Effective Sources of the Fields	56
		Atomic Motion	61
		The Vectors D and H	61
		Constitutive Relations	62
		Polarization and Magnetization as Source Terms	63
		Truncation and Averaging	64
		Summary	66
		Problems	67
Chapter	9	The Macroscopic Fields	69
		Introduction	69
		The Properties of E and B	71
		The Properties of D and H	71
		Electrostatic Fields	72
		A.C. Circuits	74
		Magnetostatic Fields	75
		Shape Factors and Cavity Fields	77
		Dielectric Relaxation	78
		Skin Depth	79
		Time-dependent Fields	79
		Problems	81

Chapter	10	Energy, Power and Stress	84
		Electrostatic Energy Magnetic Energy and Poynting's Vector Linear Media Stress, Force and Momentum Problems	84 86 87 89 99
Chapter	11	Plane Electromagnetic Waves	102
		Introduction Plane Waves in Vacuum Waves in Homogeneous Media Reflection and Refraction Problems	102 102 104 106 107
Chapter	12	Macroscopic Aspects of the Constitutive Relations	108
		Introduction Causality Optical Activity Birefringence Piezo-electricity Pyro-electricity Non-linear Effects Hysteresis Problems	108 109 111 112 113 114 114 114 116 118
Chapter	13	Microscopic Aspects of the Dielectric Constitutive Relation	120
		Introduction The Local Field The Basic Polarization Mechanisms Electronic Polarization Ionic Polarization Dipolar Polarization Electronic and Ionic Polarization Non-linear Effects Additivity Rules Dielectric Behaviour and Conduction Electrons Conclusion Problems	120 121 126 127 132 136 138 142 145 145 145 147
Chapter	14	Microscopic Aspects of the Magnetic Constitutive Relation	1 <b>49</b>
		Diamagnetism and Paramagnetism	149
		The Frequency Dependence of Paramagnetism	152 vii

.

		Magnetic Resonance	153
		Ferromagnetism	154
		The Difference between Dielectric and Magnetic Phenomena	155
		Problems	156
Chapter	15	Thermodynamics	158
		Introduction	158
		Electromagnetic Work	160
		Voltage and Current Generators	162
		Capacitors	164
		Dielectric Systems	1 <b>66</b>
		Magnetic Media	172
		Superconductors	174
		Thermodynamics and Statistical Mechanics	1 <b>76</b>
		Paramagnetic Relaxation	177
		Piezo-electricity	179
		Conclusion	179
		Problems	180
Chapter	16	Statistical Mechanics	182
		Introduction	182
,		Non-interacting Systems	187
		Interacting Systems	190
		Summary	195
		Problems	195
Chapter	17	Thermal Radiation	196
		Thermal Energy in the Electromagnetic Field	196
		Thermodynamics	197
		Statistical Mechanics	200
		Zero-point Energy	202
		Problems	204
Chapter	18	Noise and Fluctuations	205
		Introduction	205
		Johnson Noise	205
		Shot Noise	200
		Noise in a Semiconductor Diode	208
		Noise in Transistors	209
		The Relation between Electrical Noise and Statistical	200
		Mechanics	210
		Noise Figure and Noise Temperature	212
		Problems	213

		C	ontents
Chapter	19	Résumé	214
		Bibliography	217
Appendix		Vectors	219
		1. Vectors	219
		2. Coordinates and Components	220
		3. Triple Products of Vectors	222
		4. Differentials of Products	222
		5. Double Differentials	222
		6. Special Relations Involving r	223
		7. Integrals	224
		8. Poisson's Equation	227
		9. Representation of a Vector in Terms of Its Sources and	
		Vortices	227
		10. Representation of a Scalar as the Divergence of a Vector	: 229
		11. Total and Partial Time Derivatives	231
		Problems	234
REFERENCE	8		237
