CHAPTER

1 PHILOSOPHY AND LOGIC OF PHYSICAL THEORY

1–1 The nature and aim of theory in physics 1
1–2 The hierarchy of theories 3
1–3 A plan for the presentation of the classical theory of charged particles 6

2 A SHORT HISTORY OF THE CLASSICAL THEORY OF CHARGED PARTICLES

2–1 Before Lorentz 8
2–2 The work of Lorentz and Abraham 11
2–3 The impact of relativity 16
2–4 Attempts at modification and the eventual formulation of the theory for point charges 19

3 FOUNDATIONS OF CLASSICAL MECHANICS

A. THE EQUIVALENCE OF STATIC COORDINATE SYSTEMS . . 26
3–1 Reference frames 26
3–2 The Euclidean group 27
B. THE RELATIVITY OF VELOCITY 28
3–3 Force and the law of inertia 28
3–4 Galilean invariance 30
3–5 Inertial frames of reference 31
3–6 Lorentz invariance 32
C. THE PRINCIPLE OF EQUIVALENCE 35
3–7 Three kinds of mass 36
3–8 Free fall 37
3–9 Fictitious forces and apparent gravitational fields 39
3–10 Einstein's principle of equivalence 41
3–11 Experimental confirmation 42
D. THE RELATIVITY OF ACCELERATION 43
3–12 Local inertial frames 43
3–13 Gravitational forces and space curvature 45
3–14 Mach's principle 47

E. THE BASIC PROBLEM OF CLASSICAL DYNAMICS 50
3–15 Causality 50
3–16 The initial-value problem for Newtonian interactions . . . 52
3–17 Conservation laws 54

4 THE MAXWELL-LORENTZ FIELD

A. THE EQUATIONS 61
4–1 Lorentz's microscopic theory 61
4–2 Free electromagnetic fields 63
4–3 Potentials and gauges 65
4–4 The solenoidal form of the Maxwell-Lorentz equations . . 68
4–5 The covariant form of the Maxwell-Lorentz equations . . . 70
B. THE SOLUTIONS 74
4–6 Covariant solution of the source-free equations 74
4–7 The potentials 77
4–8 The field strengths 83
C. THE CONSERVATION LAWS 85
4–9 The Lagrangian and invariance under translations 86
4–10 Invariance under proper homogeneous Lorentz transformations 94
4–11 Gauge invariance 102
4–12 Conformal invariance 104

5 ELECTROMAGNETIC RADIATION

5–1 Momentum and energy of radiation 106
5–2 Local criterion for radiation 113
5–3 Radiation from uniformly accelerated charges 114
5–4 Synchrotron radiation 121

6 THE CHARGED PARTICLE

A. STRUCTURE AND KINEMATICS 123
6–1 The Abraham-Lorentz-Poincaré model 123
6–2 Charged particles without structure 127
6–3 The relativistic Lorentz electron 129
B. DYNAMICS OF A SINGLE CHARGED PARTICLE 134
6–4 The asymptotic conditions 134
6–5 Deductions from the Maxwell-Lorentz equations and the conservation laws 137
6–6 The equations of motion 145
6–7 Physical meaning of the equations of motion 149
6–8 Existence, uniqueness, and perturbation series of the solutions 153
6–9 The action principle 157
C. SPECIAL SYSTEMS 168
6–10 The free particle 168
6–11 Uniform acceleration 169
6–12 The intrinsic orbit geometry 173
6–13 The pulse 176

6–14 The oscillator 179
6–15 Coulomb force problems 182

7 GENERALIZATIONS

7–1 Systems of more then one charged particle 188
7–2 Action at a distance 194
7–3 The test charge 196
7–4 Charged particles with structure 197
7–5 Point particles with spin 204

8 THE RELATION OF THE CLASSICAL LORENTZ-INVARIANT CHARGED-PARTICLE THEORY TO OTHER LEVELS OF THEORY

A. CLASSICAL THEORIES 209
8–1 The nonrelativistic approximation 209
8–2 The limit to neutral particles 213
8–3 Is the principle of equivalence valid for charged particles? . 215
8–4 General relativity 220
B. QUANTUM THEORIES. 224
8–5 Nonrelativistic quantum mechanics 224
8–6 Relativistic quantum mechanics 230
8–7 Quantum electrodynamics 238

9 THE THEORY'S STRUCTURE AND PLACE IN PHYSICS

9–1 Radiation fields, Coulomb fields, and other kinds of electromagnetic fields 241
9–2 Symmetry properties of the theory 245
9–3 The structure of the theory. 254
9–4 The theory in its larger context 261

A-1 THE SPACE-TIME OF SPECIAL RELATIVITY

A1–1 Derivation of the Lorentz transformation 267
A1–2 Lorentz transformations and space rotations 270
A1–3 The Lorentz groups 274
A1–4 Proper time and kinematics 275
A1–5 Spacelike planes 279
A1–6 The light-cone surface element 282

A-2 THE SPACE-TIME OF GENERAL RELATIVITY

A2–1 Generalizing Minkowski space 286
A2–2 The covariant derivative 287
A2–3 Parallelism and curvature tensor 289
A2–4 Geodesics 291
A2 5 Riemann space and Minkowski space 293
