C O N T E N T S

Chapter 1 Lumped-Circuit and Field Concepts 1

1.1 Lumped Electric Circuits 1
1.2 Electromagnetic Fields 6

Chapter 2 Quasi-Static Fields and Distributed Circuits 28

2.1 The Dilemma of Lumped Circuits 28
2.2 Approximate Solutions 32
2.3 Another Exact Field Solution and the Concept of a "Distributed Circuit" 54
2.4 Transmission Line as a Distributed Circuit 58

Chapter 3 Steady-State Waves on Lossless Transmission Lines 70

3.1 Solution of the Equations 70
3.2 Traveling Waves 72
3.3 Complete Standing Waves 78
3.4 The Effects of a General Impedance Termination 88
3.5 The Smith Chart 105
3.6 Impedance Calculation 108

Chapter 4 Transient Waves on Lossless Transmission Lines 127

4.1 Time-Domain Solution of the Differential Equations 127
4.2 Traveling Waves 131

4.3 Boundary Conditions 133
4.4 Another Time-Domain Method 165

Chapter 5 Traveling Waves on Dissipative Transmission Lines 179

5.1 Steady-State Solution 179
5.2 Some Aspects of Transient Response 187

Chapter 6 Natural Oscillations, Standing Waves, and Resonance 202

6.1 Free Oscillations and Natural Frequencies 203
6.2 Forced Oscillations, Poles, and Zeros 220
6.3 Transient Response 231
6.4 Points of View Involving Energy and Power 245
6.5 Resonance 270

Chapter 7 Plane Waves in Lossless Media 304

7.1 Uniform Plane Waves in the Time Domain 304
7.2 Plane Waves in the Sinusoidal Steady State and Frequency Domain 313
7.3 Normal Incidence of a Uniform Plane Wave 334
7.4 Oblique Incidence of a Uniform Plane Wave 346
7.5 Guided Waves 369

Chapter 8 Plane Waves in Dissipative Media 402

8.1 Plane Waves (Frequency Domain) 402
8.2 Normal Incidence of Uniform Plane Waves 427
8.3 Oblique Incidence of Uniform Plane Waves 442
8.4 Some Guided Waves 449

Chapter 9 Tranverse Electromagnetic Waves 493

9.1 The TEM Form of Maxwell's Equations (Time Domain) 493
9.2 Transmission-Line Concepts for Two-Conductor Lines (Time Domain) 499

9.3 Some General Features of TEM Waves in the Sinusoidal Steady State 509
9.4 Transmission-Line Concepts for Two-Conductor Lines (Sinusoidal Steady State) 514
9.5 More About the TEM Field in a Two-Conductor Line 519
9.6 Some Examples 524
9.7 Transmission-Line Concepts for Multi-Conductor Lines 535

Chapter 10 Elements of Radiation 555

10.1 Definition of the Problem 555
10.2 Spherical Coordinates 563
10.3 Solution of Maxwell's Equations 566
10.4 Wave Impedance 577
10.5 Complex Power 578
10.6 The Physical Electric Dipole 579
10.7 Radiation Characteristics 592
10.8 Coupled Dipoles 593
10.9 The Receiving Properties of a Dipole 598
10.10 Radiation from Two or More Dipoles 601

Index 613

SECTIONS THAT MAY BE OMITTED FROM A MINIMUM UNDERGRADUATE SUBJECT

2.2.3.1–2.2.4.1 Some Analytical Difficulties, etc. 42–53
4.4 Another Time-Domain Method, and Examples 165–170
5.2.3 An Example of Distortion 194–198
6.3.1.2 Sudden Sinusoidal Drive 237–240
6.3.2 Initial Conditions 240–245
6.4.2.2 Small Reactive Effects 265–270
6.5.2–6.5.2.2 Coupling to Resonant Systems, etc. 277–295
7.2.2–7.2.3 Nonuniform Plane Waves, etc. 320–334
7.4.3.3 Critical Reflection 362–369
7.5–7.5.3 Guided Waves, etc. 369–392
8.1.3–8.1.3.2 Nonuniform Plane Waves, etc. 421–424
8.3 Oblique Incidence of Uniform Plane Waves 442–449
8.4–8.4.6 Some Guided Waves, etc. 449–488
9.3–9.5 Some General Features of TEM Waves in the Sinusoidal Steady State, etc. (but see footnote, p. 509) 509–524
9.6.2 Open-Wire Line 530–535
9.7 Transmission-Line Concepts for Multiconductor Lines 535–548
