CONTENTS

CHAPTER 1	THE OSCILLATOR	1
1.1	The Simple Harmonic Oscillator	2
	The solution	5
	Energy	11
	Phase-space trajectory	15
1.2	Oscillators and Some of Their Uses	18
	Mechanical oscillations – the pendulum	18
	Sound oscillations – the Helmholtz resonator	22
	Electrical oscillations – the LC circuit	25
	Electron oscillations – the plasma frequency	30
1.3	Damped Oscillations	37
	The series RLC circuit	37
	Light damping	39
	Heavy damping	43
	Discharge of a capacitor bank	43
1.4	Resonance	48
	The sinusoidally driven oscillator	48
	Energy and power dissipation	54
	The "Q" of an oscillator	57
	The effect of transients	59
1.5	Other Examples of Driven Oscillators	65
	The seismometer	65
	Electrical polarizability of atoms	69
	Electron cyclotron heating	74
1.6	Nonlinearities	80
	Harmonic generation	81
	Rectification	84
	Detection	85
	Modulation	87
	Parametric excitation	93
1.7	Coupled Oscillators	98
	Two coupled oscillators	99
	Two coupled electrical circuits	110
	Many coupled oscillators – electrical filters	112
CHAPTER 2	THE WAVE	117
2.1	Traveling Waves	118
	Transverse waves on a string	123
	Sound waves in a pipe	126
2.2	The Energy of Waves	131
	The intensity and the decibel	134

2. 3	Oscillating Modes of a Closed System	137
	The standing wave	137
	Modes of oscillation on a string	141
	Vibrating air colums	146
2. 4	Waves in Space	149
	The plane wave	150
	The propagation vector $\vec{k}$	151
	The three-dimensional wave equation	155
	Modes of vibration in three dimensions	155
	The spherical wave	158
2. 5	Anharmonic Waves	161
	Periodic disturbances – Fourier series representation	169
	Traveling pulses and wave packets – the Fourier integral	177
CHAPTER 3	THE ELECTROMAGNETIC FIELD	189
3. 1	The Fundamental Laws of Electromagnetism	190
	Gauss' law	190
	Faraday's law of induction	195
	Maxwell's generalization of Ampère's circuital law	199
	The absence of the magnetic monopole and its consequences	201
	Charge conservation	203
	Maxwell's equations	203
	Summary of results from the algebra of vectors	204
3. 2	The Electromagnetic Field in Regions Free of Sources	209
3. 3	The Transverse Uniform Plane Wave	213
	The plane sinusoidal traveling wave	216
3. 4	Polarization	221
3. 5	The Standing Electromagnetic Wave	229
3. 6	The Poynting's Vector and the Flow of Energy	231
	Examples of energy flow	234
	Funny things can happen when we play with Poynting's vector	236
3. 7	Radiation Pressure	241

CHAPTER 4	SOURCES OF RADIATION	251
4.1	Radiation from an Accelerated Charge	255
	The radiation pattern	262
	The Larmor formula for the radiated power	263
4.2	Radiation from Antennas	267
	The oscillating current element	267
	The short "practical" antenna	269
	Longer antennas	271
	The near field of an oscillating current element	274
4.3	Bremsstrahlung	277
	Power radiated in an electron-ion collision	278
	Polarization	285
	Frequency spectrum	286
4.4	Cyclotron and Synchrotron Radiation	288
	Synchrotron radiation	294
4.5	Black-Body Radiation	301
CHAPTER 5	GUIDED WAVES	313
5.1	Electric and Magnetic Fields near the Surface of a Conductor	314
	A plane wave striking a metal at normal incidence	322
	Reflection from a metal surface at oblique incidence	327
5.2	Radio Frequency Transmission Lines	331
	The coaxial line	337
	The characteristic impedance Z_o	339
	Impedance matching	342
	Transmission lines as circuit elements	347
	The quarter-wave transformer	350
5.3	Waveguides	355
	The rectangular waveguide	356
	Energy flow	360
	Dispersion	364
	Wave velocities	366
	The guided wave viewed as a problem of oblique reflection	373
	Higher waveguide modes	376
	Dielectric waveguides	380
5.4	Cavity Resonators	382
	The rectangular microwave resonator	384
	Optical resonators	390

CHAPTER 6 INTERACTION OF WAVES WITH MATTER 397

6.1 Polarization 399

6.2 Magnetization 408

6.3 Maxwell's Macroscopic Equations in the Presence of Matter 413

6.4 Propagation of Plane Waves in Matter – General Considerations 422

6.5 Waves in Dielectrics 426

6.6 Waves in Conductors and Plasmas 441

CHAPTER 7 REFLECTION, REFRACTION, AND SCATTERING 453

7.1 Reflection from a Plane Dielectric Interface – Normal Incidence 456

7.2 Reflection from Dielectric Layers 462

7.3 Reflections from a Metal 467

7.4 Reflection and Refraction from a Perfect Insulator at Oblique Incidence 472
Total internal reflection 475
Brewster's angle θ_B 483

7.5 Scattering 488
Scattering by free electrons – Thomson scattering 489
Scattering by atoms – why the sky is blue – Rayleigh scattering 495
A slight dilemma 499
Radiation damping 502

7.6 Stimulated Emission – the Laser 507

CHAPTER 8 INTERFERENCE AND DIFFRACTION 519

8.1 Interference of Two Monochromatic Waves 520
Interference of waves from two oscillating current elements 522
Special case of equal intensities 525

8.2	Examples of Two-Beam Interference	532
	Young's experiment	532
	Lloyd's mirror	534
	Interference by reflection from a thin film	537
8.3	Interference of Waves from a Multiple Array of Sources	539
	Spectral resolving power of an array of sources	544
	Interference by multiple reflections – the Fabry-Perot etalon	549
8.4	Two- and Three-Dimensional Arrays	553
	The two-dimensional array	553
	Three-dimensional arrays – x-ray diffraction	556
8.5	Diffraction	559
	Huygens-Fresnel principle	561
8.6	Diffraction by a Circular Aperture	563
	The limit of an infinitely large aperture	567
8.7	Fraunhofer Diffraction by a Long Slit	570
8.8	Resolving Power	577
8.9	The Diffraction Grating	581
8.10	Holography	585
8.11	Coherence	590
APPENDIX 1	A LITTLE MATHEMATICS ON SUPERPOSITION OF PERIODIC MOTIONS	599
A1.1	Oscillations of the Same Frequency ω	599
	Graphical method	600
A1.2	Addition of Oscillations of Different Frequencies	605
APPENDIX 2	A LITTLE MATHEMATICS ON COMPLEX QUANTITIES	609
	Graphical representation	610
	Solutions of other differential equations	614
	The complex conjugate	616
APPENDIX 3	ELECTRON SUBJECTED TO AN RF ELECTRIC FIELD ORTHOGONAL TO A STEADY MAGNETIC FIELD	619
