Introduction 1

**Chapter I. General Properties of Slow Wave Structures 8**

- 1-1 Synopsis 8
- 1-2 Periodicity Theorem 9
- 1-3 The Central Problem of Slow Wave Systems. Dispersion Curve Solutions 14
- 1-4 Significance of the Group Velocity 17
- 1-5 Early Transmission Filters 19
- 1-6 The Periodically Lumped-Loaded Transmission Line 20
- 1-7 The Periodic Cavity Chain 24

**Chapter II. Conventional Analyses of Helices and Loaded Waveguides 39**

- 2-1 Synopsis 39
- 2-2 The Sheath Helix 40
- 2-3 The Tape Helix 44
- 2-4 Multifilar Helices 49
- 2-5 Tape Ladder Lines 51
- 2-6 The Ridged Waveguide 57

**Chapter III. Radiation and Cavity Coupling through Small Holes and Apertures 63**

- 3-1 Synopsis 63
- 3-2 Objectives 64
- 3-3 Review of the Bethe Theory 65
- 3-4 The Centerhole-Coupled Cavity Chain 72
- 3-5 Nearly Uniform  $\hat{H}_0$  and Inflecting  $\hat{E}_0$  on the Hole 74
- 3-6 Nearly Uniform  $\hat{E}_0$  and Inflecting  $\hat{H}_0$  on the Hole 76
- 3-7 Elliptical Hole in a Plane Sheet 77
- 3-8 Fields and Coupling on Waveguide Apertures 80

3-9	Equations for Two Coupled Cavities	83
3-10	Expressions for the Coupling Integral $-\int_{\text{hole}} \vec{e}_1^{(1)} \times \vec{H}_1^{(1)} \cdot \vec{i}_z dS$	87
<b>Chapter IV. The Single-Passband Behavior of an Infinite Cavity Chain</b>		<b>92</b>
4-1	Synopsis	92
4-2	Dispersion Relation from the Short-Circuit Mode Expansion	94
4-3	A Theorem about the Passband Shape	101
4-4	The Power Flow–Stored Energy–Group Velocity Relation	107
4-5	The Maximization of Electronic Gain Per Cavity and the Fractional Passband Width	108
4-6	Dispersion Relation from the Open-Circuit Mode Expansion	110
4-7	Equivalent Circuits for the $n$ th Passband	112
<b>Chapter V. General Theorems about Symmetric Cavity Chains</b>		<b>120</b>
5-1	Synopsis	120
5-2	Symmetry of the Structure	122
5-3	The General Field Expansions	125
5-4	Effect of the Irrotational Modes upon the Dispersion Characteristics	134
5-5	Correction to the First Dispersion Curve Due to the Modes of the Second Passband	140
5-6	The Frequency-Squared Sum Rule	148
<b>Chapter VI. Variational Analyses of “Cold” Slow Wave Structures</b>		<b>151</b>
6-1	Synopsis	151
6-2	Examples of the Variational Technique	153
6-3	A Variational Analysis for Wire and Tape Helices	166
6-4	The Variational Analysis of Ring Helices	181
6-5	Contraound Helices	188
6-6	The Variational Analysis of the Ridged Waveguide	190
6-7	Variational Expressions for $j\omega$ and $k^2$ of a Periodic Cavity Chain	195
6-8	Critique of the Variational Analyses	201
<b>Chapter VII. Resonant-Slot and Resonant-Loop Coupled Structures</b>		<b>205</b>
7-1	Synopsis	205
7-2	A Resonant-Slot Coupled Chain	207
7-3	Calculation of the Interaction Parameter $E_z(0)^2/W_s$	214
7-4	A Slot-Coupled Chain with Successive Slots Rotated	215

- 7-5 Variational Description of the Dispersion in Resonant-Slot and Resonant-Loop Coupled Structures 220
- 7-6 Loop-Coupled Cavity Chains; the Centipede 227
- 7-7 The Cloverleaf Chain 238

**Chapter VIII. Analyses of Electron Beam Interaction with Various Slow Wave Structures 244**

- 8-1 Synopsis 244
- 8-2 Variational Treatment of the Interaction between One Helix Mode and the Beam 245
- 8-3 Extended Variational Treatment of the Helix-Beam Interaction 252
- 8-4 Interaction between the Beam and Certain Cavity Chains 257
- 8-5 Interaction of a Resonant-Slot Coupled Structure with the Beam 263
- 8-6 An Equivalence Principle for all Types of Cavity Chains 265

**Chapter IX. The Cavity-Chain Beam Tube 270**

- 9-1 Synopsis 270
- 9-2 Description of the Structure and Definitions of Terms 274
- 9-3 Nature of the Waves for Uniform Cavity Electric Field 280
- 9-4 The Growing Wave for Operation near the  $7\pi/4$  Synchronous Point 291
- 9-5 Expressions for Electromagnetic Power Flow across a Coupling Surface 292
- 9-6 Nature of the Waves for Uniform Cavity Electric Field, in a Voltage Range about the Synchronous Voltage at  $\pi$ -Cutoff 295
- 9-7 Behavior of the Growing Wave with Sinusoidal  $e_z$  Cavity Field; Operation near the  $3\pi/4$  and  $\pi$  Synchronous Points 297
- 9-8 Excitation of the Growing Wave in the First Cavity of the Fig. 9-1 Structure 302
- 9-9 Effect of a Reactive Discontinuity (Detuned Cavity) 307
- 9-10 Output Cavity Match to the Growing Wave; Input Cavity Match to the Backward Wave 311
- 9-11 Effect on the Growing Wave of the Impedance Walls 318

**Chapter X. Design Considerations for Cavity-Chain and Multicavity Klystron Beam Amplifiers 323**

- 10-1 Synopsis 323
- 10-2 Outline of the Cavity-Chain Analysis 325

- 10-3 Decoupled and Coupled Synchronously Tuned Tube Models with High Gain and Narrow Bandwidth 334
- 10-4 Effect of Stagger-Tuning on the Performances of the High-Gain, Narrow-Bandwidth Tube Models 346
- 10-5 Various Tube Models with an Optimized Output Section 347
- 10-6 Response Characteristics of Constituent Cavities Appropriate for Multicavity Klystrons 354

**Chapter XI. Parametric and Maser Slow Wave Systems 359**

- 11-1 Synopsis 359
- 11-2 Parametric Power Conversion on Two Coupled Transmission Lines 362
- 11-3 The Three-Frequency Ferroelectric Parametric Amplifier 368
- 11-4 The Three-Frequency Ferromagnetic Cavity-Chain Amplifier 387
- 11-5 The Cavity Chain Maser 394

**Chapter XII. Aspects of Slow Wave Structure Synthesis 406**

- 12-1 Synopsis 406
- 12-2 Machine Computation of the Characteristics of a Given Helix 407
- 12-3 Ideal Interaction Parameter and Impedance  $Z_I$  for a Helix or Cavity Chain 413
- 12-4 Upper and Lower Bounds to  $\omega(\beta_0)$  416
- 12-5 A Perturbation Formula for  $\omega(\beta)$  of a General Helix 422
- 12-6 Resonant-Slot and Resonant-Loop Dispersion Curve Shaping in a Cavity Chain 425

**Appendix A. Proofs Based upon the Variational Expressions 429**

- A-1. The Power Flow–Stored Energy–Group Velocity Relation. General Expression for Power Flow in a Cavity Chain 429
- A.2 Derivation of the Pierce Equation for a Weak Beam Interacting with One Mode of a Slow Wave Structure 432

**Appendix B. Measurement of Tube and Cavity Parameters 435**

- B-1. Perturbation Formula for Electric Field 435
- B-2. Definition of the Cavity Parameter  $R_{sh}/Q$  436
- B-3. Helix Impedance Based upon Perturbation of Electric Field 437
- B-4. Helix Gain Parameter  $C_p$  from the Kompfner Dip Condition 439
- B-5.  $C_p$  for the Cavity Chain 440

**Appendix C.** Dispersion and  $E_z(0)^2/W_s$  in the Cloverleaf Slow Wave Structure 442

    C-1. Dispersion Relation 442

    C-2. Interaction Parameter,  $\frac{1}{L} \int_0^L \frac{|\hat{E}_z(0)|^2 dz}{W_s}$  444

**Appendix D.** Development of the Small-Signal Beam Equations 446

**Appendix E.** Solution of the Beam and Cavity Equations 449

    E-1. Uniform Field Pattern  $\bar{e}_z$  449

    E-2. Sinusoidal Field Pattern  $\bar{e}_z = e_m \sin(\pi z/L)$  451

**Index** 455
