Preface	xiii
Chapter 1 INTRODUCTION TO MILLIMETER-WAVE CIRCUITS.....	1
1.1 Millimeter Waves and their Applications.....	1
1.2 Basics of Microwave Circuit Integration.....	5
1.3 Properties of Planar Transmission Lines.....	9
1.4 Extension of Planar Transmission Line Techniques to Millimeter- Wave Frequencies and their Limitations	21
1.5 Fin-Line and E-Plane Integrated Circuit Techniques	27
1.6 Dielectric Integrated Guides	29
1.7 Rectangular and Circular Waveguides for Millimeter Waves	36
1.8 H-Guide Structures	37
1.9 Comparison of Various Guide Structures	42
References	46
Chapter 2 ANALYSIS OF FIN LINES: APPROXIMATE METHODS.....	55
2.1 Introduction	55
2.2 Fin-Line Structures and Field Configurations	58
2.3 Analysis of a General Symmetric Fin-Line Structure—Cohn's Method	63
2.4 Formulas for Guide Wavelength and Characteristic Impedance ..	83
2.5 Susceptance Formulas for Specific Fin-Line Structures	84
2.6 Closed-Form Design Formulas for Unilateral and Bilateral Fin Lines.....	84
2.6.1 Ridge Waveguide Model.....	86
2.6.2 Empirical Expressions.....	87
2.6.3 Stationary Expressions	91
2.6.4 Synthesis Formulas	93
2.6.5 Transverse Resonance Method	94
References	97

Appendix 2-A: Susceptance Formulas for Specific Fin-Line Structures	100
Chapter 3 ANALYSIS OF FIN LINES: RIGOROUS METHODS	113
3.1 Introduction	113
3.2 Derivation of Electromagnetic Fields	114
3.3 Spectral Domain Technique	120
3.3.1 Basic Formulation	120
3.3.2 Characteristic Equation	126
3.3.3 Choice of Basis Functions	127
3.3.4 Evaluation of Higher Order Modes	132
3.3.5 Application to Some Variants of Unilateral Fin Line	133
3.4 Formulas for Characteristic Impedance	137
3.5 Spectral Domain Immittance Approach	141
3.5.1 Basic Formulation	141
3.5.2 Application to Fin Line with Slots at More Than One Dielectric Interface	146
3.6 Spectral Domain Technique Using the Concept of a Chain Matrix	150
3.6.1 Analysis of N -Layer Unilateral Fin Line	150
3.6.2 Application to Bilateral Fin Line	158
3.7 Characteristic Equations for Specific Fin-Line Structures	160
3.8 Modal Analysis of Fin Lines	161
3.8.1 Derivation of Electric and Magnetic Fields	161
3.8.2 Elements of Dyadic Green's Function Matrix	163
3.8.3 Dispersion Equation	
3.8.4 Application to a General Fin Line Consisting of Grooves and Finite Metalization Thickness	172
References	175
Appendix 3-A: Characteristic Equations for Determining the Propagation Constants of Specific Fin-Line Structures	177
Chapter 4 UNILATERAL AND INSULATED FIN-LINE CHARACTERISTICS	185
4.1 Introduction	185
4.2 Unilateral Fin Lines	186
4.2.1 Centered Slot	190
4.2.2 Centered Slot on Laterally Displaced Dielectric Substrate	194
4.2.3 Slot Displaced in Symmetric E-Plane	198
4.2.4 Sensitivity Analysis	200
4.2.5 Centered Slot with Periodic Stub Loading	202
4.2.6 Modal Spectrum	204
4.2.7 Effect of Finite Metalization Thickness	206
4.2.8 Effect of Mounting Grooves	208
4.2.9 Magnetized Ferrite Substrate	209

4.2.10 Metal Insulator Semiconductor Substrate.....	210
4.2.11 Slot Coupled to Strip Conductors.....	212
4.2.12 Conductor and Dielectric Losses.....	215
4.2.13 Coupling to a Dielectric Resonator	216
4.3 Asymmetric Unilateral Fin Lines	216
4.3.1 Single Fin in the E-Plane	216
4.3.2 Single Fin on Laterally Displaced Dielectric Substrate	217
4.4 Insulated Fin Lines.....	219
4.4.1 Centered Slot.....	220
4.4.2 Slot Displaced in Symmetric E-Plane	221
4.4.3 Modal Spectrum.....	222
4.5 Edge-Coupled Unilateral Fin Lines.....	224
4.5.1 Equal-Width Slots in Symmetric E-Plane	225
4.5.2 Slots Displaced in Symmetric E-Plane	226
4.5.3 Modal Spectrum.....	227
4.5.4 Conductor and Dielectric Losses	228
References	230
Chapter 5 BILATERAL, ANTIPODAL, AND DOUBLE-DIELECTRIC FIN-LINE CHARACTERISTICS	233
5.1 Introduction	233
5.2 Bilateral Fin Lines	234
5.2.1 Centered Slots	234
5.2.2 Slots Displaced in E-Plane	234
5.2.3 Sensitivity Analysis	236
5.2.4 Modal Spectrum	239
5.2.5 Effect of Finite Metalization Thickness	241
5.2.6 Effect of Mounting Grooves	244
5.2.7 Semiconductor Substrates	246
5.2.8 Coupling through a Strip Conductor	247
5.2.9 Conductor and Dielectric Losses	248
5.3 Asymmetric Bilateral Fin Lines	248
5.4 Antipodal Fin Lines.....	250
5.5 Double-Dielectric Bilateral Fin Lines.....	255
5.5.1 Fins Facing Each Other	255
5.5.2 Fins Facing the Side Walls.....	258
5.6 Edge-Coupled Bilateral Fin Line.....	260
References	265
Chapter 6 FIN-LINE TRANSITIONS.....	267
6.1 Introduction	267
6.2 Fin-Line Construction.....	267
6.3 Transition between Fin Line and Waveguide	270
6.3.1 Fin-Line Tapers.....	271
6.3.2 Quarter-Wave Transformers.....	278

6.4	Transitions between Fin Lines and Planar Transmission Lines	287
6.4.1	Fin Line to Microstrip.....	287
6.4.2	Fin Line to Suspended Microstrip.....	289
6.4.3	Fin Line to Inverted Microstrip	290
6.4.4	Fin Line to Coplanar Lines	291
References	294	
Chapter 7 FIN-LINE RESONATORS	297	
7.1	Introduction	297
7.2	Basic Properties of Slot Resonators.....	297
7.3	Rectangular Slot Resonator in Unilateral Fin Line	302
7.3.1	Spectral Domain Analysis	302
7.3.2	Basis Functions	306
7.3.3	Determination of End Effects	309
7.3.4	Resonance Characteristics	310
7.3.5	Stepped Rectangular Slot Resonators	314
7.4	Coupled Rectangular Slot Resonators in Unilateral Fin Line	315
7.4.1	Electric Field Distribution in Coupled Slots	315
7.4.2	Characteristic Equations	318
7.4.3	Even-Mode and Odd-Mode Resonance Characteristics	319
7.5	Broadside-Coupled Slot Resonators in Fin Line	325
7.5.1	Broadside-Coupled Resonators in Double-Dielectric Fin Line	325
7.5.2	Bilateral Fin-Line Resonators	327
7.6	Broadside-End Coupled Slot Resonators in Fin Line.....	328
7.6.1	Broadside-End Coupled Resonators in Double-Dielectric Fin Line	328
7.6.2	End-Coupled Resonators in Bilateral Fin Line	329
7.7	Metal Insert Rectangular Slot Resonators.....	330
References	335	
Chapter 8 DISCONTINUITIES AND THEIR CHARACTERIZATION.....	337	
8.1	Types of Discontinuities and their Network Equivalents	337
8.2	Discontinuity Analysis Techniques.....	340
8.2.1	Modal Analysis	341
8.2.2	Transverse Resonance Method	352
8.2.3	Rectangular Waveguide Equivalent Approach	354
8.2.4	Spectral Domain Approach.....	358
8.2.5	Variational Method	359
8.3	Experimental Techniques.....	361
8.3.1	Open-Circuit, Short-Circuit Method	361
8.3.2	Cavity-Resonance Method	364
8.4	Discontinuity Characteristics	368
8.4.1	Impedance Step.....	368

8.4.2 Inductive Strip	369
8.4.3 Symmetrical Notch	372
8.4.4 Symmetrical Capacitive Strip	372
8.4.5 Bilateral Fin-Line Section Embedded in Unilateral Fin Line	375
8.4.6 Discontinuities in E-Plane Circuits	375
References	380
Chapter 9 APPLICATIONS.....	383
9.1 Introduction	383
9.2 Directional Couplers	384
9.2.1 E-Plane Probes	384
9.2.2 Printed Probe Array Couplers.....	390
9.2.3 Branch-Guide Couplers	394
9.2.4 Hybrid Branch-Line Couplers	395
9.2.5 Parallel-Coupled Fin-Line Couplers.....	398
9.2.6 Fin-Line Microstrip Coupler.....	402
9.3 Power Dividers.....	403
9.4 Filters	404
9.4.1 Types of Slot Patterns.....	404
9.4.2 Low-Pass Filters .. .	407
9.4.3 Bandpass Filters	409
9.4.4 Bandstop Filters	429
9.5 PIN Diode Attenuators and Switches.....	431
9.5.1 Basic Series and Shunt Type Circuits	431
9.5.2 Characterization of <i>pin</i> Diodes	434
9.5.3 Shunt Circuits.....	434
9.5.4 Series Circuits	437
9.5.5 Y-Junction SPDT Switches	438
9.6 Detectors	440
9.7 Modulators	441
9.8 Mixers.....	445
9.8.1 Single-Ended Mixers	445
9.8.2 Balanced Mixers.....	445
9.8.3 Double-Balanced Mixers.....	449
9.8.4 Subharmonically Pumped Mixers.....	451
9.9 Oscillators	451
9.10 Isolators	454
9.11 Circulators.....	456
9.12 Amplifiers	458
9.13 Antennas	461
References	463
Index	473
