

CONTENTS

PREFACE TO VOLUME 3	vii
11. Electromagnetic Waves	441
11.1 Plane electromagnetic waves	441
11.2 Reflection and transmission: normal incidence	444
11.3 Reflection and refraction: oblique incidence	455
11.4 Energy relations for oblique incidence	460
11.5 Total internal reflection	464
11.6 Propagation of waves in a conducting medium	467
11.7 Waveguides	473
11.8 The transmission line	492
12. The Lorentz Invariance of Maxwell's Equations	511
12.1 Groups of transformations	511
12.2 Four-vectors and six-vectors	515
12.3 The Lorentz group	519
12.4 Maxwell's equations	523
12.5 The electromagnetic potentials	529
13. Radiation	536
13.1 General properties of radiation	536
13.2 The Hertz vector	537
13.3 Solutions with axial symmetry	540
13.4 Discussion of the field strength	542
13.5 Interpretation of the results	544
13.6 Other kinds of radiative solutions	546
13.7 The fields of moving charges	550
13.8 The Liénard–Wiechert potentials	553
13.9 Calculation of the field strengths	555

14. The Motion of Charged Particles	569
14.1 Introduction	569
14.2 Non-relativistic motion of an electric charge in an electromagnetic field	570
14.3 Charged particles and currents	585
14.4 Relativistic motion of charges	588
ANSWERS TO THE EXERCISES	599
INDEX	601
