

# CONTENTS

PREFACE . . . . .	v
1. MATHEMATICAL INTRODUCTION . . . . .	1
<i>The M.K.S. System of Units—Circuit Analysis—The Fourier Series, Integral and Transform—Functions of a Complex Variable—The Laplace Transform—Bessel Functions—Vector Analysis—Cylindrical and Spherical Co-ordinates</i>	
2. PRINCIPLES OF ELECTROMAGNETIC THEORY . . . . .	44
<i>Application of Maxwell's Equations to Plane Waves—Phase and Group Velocities—Power Associated with Electromagnetic Fields—The Complex Poynting Vector—The Skin Effect—Reflection of Plane Electromagnetic Waves</i>	
3. TRANSMISSION LINES . . . . .	68
<i>The Transmission Line Equations—Reflection Coefficient and Standing Waves—Standing Wave Detectors—The Measurement of Standing Wave Ratios—Input Impedance of Terminated Line—Circle Diagrams of Impedance (Cartesian Type)—Circle Diagrams of Impedance (Polar Type)—Transmission Line Constants—Measurements with Standing Wave Detectors—Resonant Lines</i>	
4. WAVEGUIDES . . . . .	97
<i>Field Components for H-waves in Rectangular Waveguides—Propagation Constant of H-waves in Rectangular Waveguides—Field Components for E-waves in Rectangular Waveguides—Properties of Waves in Rectangular Waveguides—Power Propagation through Rectangular Waveguides—Waveguide Wall Losses—Rectangular Waveguide Resonators—Cylindrical Waveguides (E-modes)—Cylindrical Waveguides (H-modes)—Waveguide Components—Microwave Measurements</i>	
5. SPECTROSCOPY AT RADIO AND MICROWAVE FREQUENCIES . . . . .	140
<i>Notation and Fundamental Principles—The Zeeman Effect—Nuclear Spin—Nuclear Magnetic Resonance (N.M.R.)—Nuclear Magnetic Susceptibility—Spin-Lattice and Spin-Spin Interactions—Experimental Techniques of Nuclear Magnetic Resonance—Results of Nuclear Magnetic Resonance Spectroscopy—Microwave Spectroscopy of Gases—Experimental Gaseous Microwave Spectroscopy—Electron Magnetic Resonance (E.M.R.)</i>	
6. PROPERTIES OF DIELECTRICS AND FERRITES . . . . .	173
<i>Parameters for Expressing Dielectric Properties—Dielectrics in Static Fields: Clausius-Mosotti Theory—The Debye Equations for Static Fields—The Debye Equations for Alternating Fields—The Measurement of Dielectric Properties—Magnetic Ferrites: Introduction—Radio Frequency Applications of Ferrites—Properties of Ferrites at Microwave Frequencies—Microwave Applications of Ferrites—Measurement of Ferrite Properties at Microwave Frequencies</i>	
7. RADIATION AND PROPAGATION OF ELECTROMAGNETIC WAVES . . . . .	208
<i>Basic Properties of Aerials—Scalar and Vector Retarded Potentials—The Hertzian Dipole—Practical Dipoles—Aerial Arrays—Microwave Aerials—Propagation of Radio Waves</i>	

CONTENTS

8. ARTIFICIAL LINES AND FILTERS . . . . .	228
<i>Ladder Networks—Input Impedance of Line of n Sections—Frequency Characteristics of Constant-k Sections—Network Properties in Terms of Open Circuit and Short Circuit Impedances—m-derived Filters—Bandpass and Band-stop Filters—Transmission Line Filters—Delay Lines</i>	
9. THERMIONIC EMISSION AND THERMIONIC VALVES . . . . .	265
<i>THERMIONIC EMISSION: Maxwell-Boltzmann Distribution—The Fermi-Dirac Distribution (Electrons in a Metal)—Electrons in Solids—The Thermionic Emission Formulae. THERMIONIC VALVES: The Diode—The Triode—The Tetrode—The Pentode</i>	
10. AMPLIFICATION AND THE SINGLE STAGE AMPLIFIER . . . . .	300
<i>Amplification—The Single Stage Amplifier—The Resistance-Capacitance Amplifier—The Bandpass Amplifier—Power Amplification—The Grounded Grid Configuration—The Grounded Anode Configuration</i>	
11. MULTI-STAGE AMPLIFIERS . . . . .	344
<i>Introduction—Steady State Response—The Bandpass Amplifier—Transient Response of Multi-stage Amplifiers—The Distributed Amplifier—Feedback</i>	
12. OSCILLATORS . . . . .	370
<i>Sinusoidal Oscillators—The Phase Shift Oscillator—Requirements of an Oscillator—Quartz Crystal Oscillators</i>	
13. HIGH FREQUENCY SYSTEMS AND KLYSTRONS . . . . .	420
<i>Valve Circuits at Ultra High Frequencies—Transit Times and the Mechanism of Current Flow in Valve Circuits—Effect of the Valve Impedances—Circuit Limitations—The Klystron—The Two-resonator Klystron—The Reflex Klystron</i>	
14. TRAVELLING WAVE TUBES AND MAGNETRONS . . . . .	461
<i>Introduction—The 'O' Type Travelling Wave Tube—The 'M' Type Travelling Wave Tube—The Hull Magnetron—The Split Anode Magnetron—The Cavity Magnetron</i>	
15. NOISE . . . . .	496
<i>Probability Functions—Distribution Functions—Noise—Valve Noise—Noise Circuit Definitions—Noise Measurements</i>	
INDEX . . . . .	519
