PREFACE	ix
ACKNOWLEDGMENTS	xiii
CONTENTS OF VOLUME 2	xv
CHAPTER 1 □ INTRODUCTION	1
PART I □ SCATTERING AND PROPAGATION OF WAVES IN A TENUOUS DISTRIBUTION OF SCATTERERS: SINGLE SCATTERING APPROXIMATION	
CHAPTER 2 □ SCATTERING AND ABSORPTION OF A WAVE BY A SINGLE PARTICLE	
2-1 Cross Sections and Scattering Amplitude	9
2-2 General Properties of Cross Sections	12
2-3 Forward Scattering Theorem	14
2-4 Integral Representations of Scattering Amplitude and Absorption Cross Section	15
2-5 Rayleigh Scattering	18
2-6 Rayleigh-Debye Scattering (Born Approximation)	22
2-7 WKB Interior Wave Number Approximation	25
2-8 Mie Theory	27
2-9 Elliptic Polarization and the Stokes Parameters	30
2-10 Partial Polarization and Natural Light	32
2-11 Addition of Independent Waves	33
2-12 Scattering Amplitude Functions f_{11} , f_{12} , f_{21} , and f_{22} and the Stokes Matrix	33
2-13 Transformation of the Stokes Parameters for Rotation about the Axis	35
2-14 Particle Size Distribution	36
2-15 Acoustic Waves	37
2-16 Acoustic Scattering	39
CHAPTER 3 □ CHARACTERISTICS OF DISCRETE SCATTERERS IN THE ATMOSPHERE, OCEAN, AND BIOLOGICAL MATERIALS	
3-1 Weather Radar, Clutter, and Interference	41
3-2 Aerosols and Hydrometeors	43
	v

vi □ CONTENTS

3-3	Optical Scattering in Seawater (Hydrooptics)	52
3-4	Underwater Acoustic Scattering (Hydroacoustics)	55
3-5	Scattering from Biological Materials	62

CHAPTER 4 □ SCATTERING OF WAVES FROM THE TENUOUS
DISTRIBUTION OF PARTICLES

4-1	Single Scattering Approximation for Average Scattered Power	71
4-2	First Order Multiple Scattering Representation of Scattered Power	73
4-3	Narrow Beam Equation	74
4-4	Coherent and Incoherent Fields	77
4-5	Time-Correlated Scattering Cross Section of a Moving Particle	80
4-6	Temporal Correlation Function and Temporal Frequency Spectrum of Scattered Fields	85
4-7	Spatial Correlation of Scattered Fields	86
4-8	Correlation with a Moving Receiver	88
4-9	Probability Distributions of Scattered Fields	89

CHAPTER 5 □ SCATTERING OF PULSE WAVES FROM A RANDOM
DISTRIBUTION OF PARTICLES

5-1	General Formulation of Pulse Propagation and Scattering in a Time-Varying Random Medium	93
5-2	Two-Frequency Correlation Function and Correlation of the Output Pulse	96
5-3	Coherence Time and Coherence Bandwidth	97
5-4	Scattering of a Narrow Band Pulse	98
5-5	Backscattering of a Pulse from a Narrow Beam Transmitter	101
5-6	Backscattering of a Train of Short Pulses	106
5-7	Backscattering of a Pulse from a Transmitter with a Broad Beam	108
5-8	Bistatic Scattering of a Pulse	109
5-9	Ambiguity Function Radar Representation	110
5-10	Pulse Doppler Radar	112

CHAPTER 6 □ LINE-OF-SIGHT PROPAGATION THROUGH
TENUOUS DISTRIBUTION OF PARTICLES

6-1	Coherent and Incoherent Intensities and Spatial Correlation of Fluctuation of a Plane Wave	118
6-2	Temporal Correlation and Frequency Spectrum of a Plane Wave	123
6-3	Line-of-Sight Propagation of a Plane-Wave Pulse	124
6-4	Line-of-Sight Propagation between a Transmitter and a Receiver	126
6-5	Pulse Propagation between a Transmitter and a Receiver	131
6-6	Rytov Solution for Amplitude and Phase Fluctuations	134
6-7	Rytov Solution for a Plane Wave Case	136
6-8	Temporal Correlation and Frequency Spectra of Log-Amplitude and Phase Fluctuations of a Plane Wave	139
6-9	Rytov Solution Which Includes Transmitter and Receiver Characteristics	141

PART II □ TRANSPORT THEORY OF WAVES IN RANDOMLY
DISTRIBUTED SCATTERERSCHAPTER 7 □ TRANSPORT THEORY OF WAVE PROPAGATION IN
RANDOM PARTICLES

7-1	Specific Intensity, Flux, and Energy Density	148
7-2	Specific Intensity in Free Space and at Boundaries between Homogeneous Media	152
7-3	Differential Equation for Specific Intensity	155
7-4	Reduced Incident Intensity, Diffuse Intensity, Boundary Condition, and Source Function	158
7-5	Integral Equation Formulation	160
7-6	Receiving Cross Section and Received Power	163
7-7	Transport Equation for a Partially Polarized Electromagnetic Wave	164
7-8	Relationship between Specific Intensity and Poynting Vector	166

CHAPTER 8 □ APPROXIMATE SOLUTIONS FOR TENUOUS MEDIUM

8-1	Specific Intensity in the First Order Multiple Scattering Approximation	168
8-2	Plane Wave Incidence on a Plane-Parallel Medium	170
8-3	Collimated Beam Incident on a Plane-Parallel Medium	173

CHAPTER 9 □ DIFFUSION APPROXIMATION

9-1	Derivation of the Diffusion Equation	175
9-2	Boundary Conditions	179
9-3	Collimated Beam Incident upon a Slab of Particles	181
9-4	Solution for a Plane Wave Incident upon a Slab of Particles	182
9-5	Solution for a Collimated Beam of a Finite Width Incident upon a Slab of Particles	184
9-6	Diffusion from a Point Source	185
9-7	Two-Fiber Reflectance	186
9-8	The Fiberoptic Oximeter Catheter	188

CHAPTER 10 □ TWO AND FOUR FLUX THEORY

10-1	Kubelka-Munk Two Flux Theory	191
10-2	Coefficients K and S for the Two Flux Theory	195
10-3	Four Flux Theory	196
	Appendix 10A	199

CHAPTER 11 □ PLANE-PARALLEL PROBLEM

11-1	Plane Wave Normally Incident upon a Plane-Parallel Slab	203
11-2	Typical Phase Functions	205
11-3	Gauss's Quadrature Formula	205
11-4	General Solution	208
11-5	Semi-Infinite Medium	215
11-6	Oblique Incidence and Other Techniques	216
11-7	Layered Parallel-Plane Medium	216
11-8	Some Related Problems	219

viii □ CONTENTS

CHAPTER 12 □ ISOTROPIC SCATTERING

12-1	Fourier Transform Method for Isotropic Scattering	221
12-2	Diffusion and Near Field Phenomena	225
12-3	Radiation from an Arbitrary Incident Intensity	227
12-4	Radiation from Incident Spherical Wave with Angular Variations	228
12-5	Radiation from an Arbitrary Source Distribution	230
12-6	Isotropic Scattering in Finite Volume and the Milne Problem	232

CHAPTER 13 □ APPROXIMATION FOR LARGE PARTICLES

13-1	Derivation of Differential Equation for Small Angle Approximation	234
13-2	General Solution	236
13-3	Approximate Solution When the Diffuse Intensity is a Slowly Varying Function of Angle	239
