

CONTENTS

PREFACE	vii
1. ASPECTS OF NUMERICAL ANALYSIS	1
INTERPOLATION AND APPROXIMATION	1
1.1. Interpolation	1
1.2. Inverse interpolation	12
1.3. Interpolation in two dimensions	13
1.4. Approximation	17
1.5. L_2 -norm approximation	20
1.6. Rational approximation	32
1.7. Trigonometric interpolation	38
SOLUTION OF EQUATIONS	42
1.8. Solution of an equation	42
1.9. Systems of non-linear equations	55
MATRICES	56
1.10. Matrices	56
1.11. Matrix norms	64
LINEAR EQUATIONS	71
1.12. Linear equations - direct methods	71
1.13. Iterative methods	79
1.14. Matrix eigenvalues	82
GENERALIZED INVERSE	91
1.15. The generalized inverse	91
2. WAVEGUIDES AND DIFFERENCE EQUATIONS	98
2.1. Introduction	98
2.2. Waveguides	101
2.3. Numerical derivatives	107
2.4. Properties of difference equations	113
2.5. TEM modes	128
2.6. The dominant mode	132
2.7. Higher modes	135
2.8. Direct methods	138
2.9. Other equations	148
2.10. Conformal mapping	150
2.11. Waveguides containing dielectric	151
2.12. Microstrip transmission lines	153
2.13. Other methods for guides	161
2.14. The fast Fourier transform	161
3. OPERATORS AND EIGENVALUES	166
PRELIMINARIES	166
3.1. Hilbert space	166
3.2. Linear operators	171
3.3. Bounded linear operators	176

PARTIAL DIFFERENTIAL EQUATIONS	185
3.4. Partial differential equations	185
3.5. The cavity resonator	199
UNBOUNDED OPERATORS AND EIGENVALUES	211
3.6. Unbounded operators	211
3.7. Approximation theorems	217
3.8. Point matching	221
4. VARIATIONAL METHODS AND OPTIMIZATION	226
THE DERIVATIVE OF AN OPERATOR	226
4.1. The derivative	226
4.2. Mean-value theorem	235
4.3. Higher derivatives	241
4.4. Convex functionals	246
NEWTON'S METHOD FOR OPERATORS	249
4.5. Newton's method	249
OPTIMIZATION	260
4.6. Unconstrained optimization	260
4.7. The effect of constraints	272
VARIATIONAL PRINCIPLES	277
4.8. Variational approach	277
4.9. Examples	287
4.9.1. Network analysis	287
4.9.2. Integral equations	289
4.9.3. Ordinary differential equations	291
WAVEGUIDES	298
4.10. The capacitive iris	298
4.11. Another form of variational principle	304
4.12. The inductive iris	309
4.13. Cascade of apertures	324
5. NUMERICAL ASPECTS OF VARIATIONAL METHODS	329
MINIMAL SYSTEMS	329
5.1. Galerkin's method	329
5.2. Minimal systems	333
5.3. Positive-definite operators	340
5.4. Stability	345
INTEGRAL EQUATIONS	355
5.5. Compact operators	355
5.6. Integral equations	361
5.7. Equations of the first kind	381
NUMERICAL TRIAL FUNCTIONS	382
5.8. Finite elements	382
5.9. Finite differences	393
5.10. Comparison between finite difference and finite element	396
5.11. Eigenvalues	397

NUMERICAL INTEGRATION	397
5.12. Quadrature	397
6. ANTENNAS AND INTEGRAL EQUATIONS	411
WIRE ANTENNAS	411
6.1. Introduction	411
6.2. The perfectly conducting wire	411
6.3. General excitation of the infinite wire	416
6.4. The finite travelling-wave antenna	425
6.5. The finite wire	427
6.6. The receiving antenna	431
6.7. Numerical methods	438
6.8. Curved antennas	447
6.9. Log-periodic antennas	454
6.10. Loads and arrays	458
SOLID ANTENNAS	459
6.11. Wire grid models	459
6.12. The electric-field integral equation	463
6.13. Uniqueness	474
6.14. The magnetic-field integral equation	477
6.15. The Fredholm alternative	481
6.16. Compactness and other properties of the MFIE	489
6.17. Other integral equations	493
6.18. Numerical considerations for surfaces	503
6.19. Singular integrals	506
6.20. The algebraic system	508
6.21. The null-field method	510
6.22. The impedance boundary condition	511
DIELECTRIC ANTENNAS	515
6.23. The infinite dielectric circular rod	515
6.24. Modal excitation	521
6.25. The finite rod	526
6.26. Integral equations for general shapes	527
6.27. Uniqueness for dielectrics	532
6.28. Hybrid methods	535
7. TRANSIENT PHENOMENA	537
7.1. Finite differences	537
7.2. Integral equations in the time domain	538
7.3. Numerical methods for thin wires in the time domain	544
7.4. Perfectly conducting bodies	548
7.5. Numerical matters	550
7.6. The harmonic approach versus the impulse response	555
7.7. The Laplace transform	556
7.8. The location of the poles	567
7.9. The impulse response	573
7.10. Practical determination of the positions of the poles	576
7.11. Prony's method	578

8. GEOMETRIC THEORY OF DIFFRACTION	583
8.1. The high-frequency approximation	583
8.2. Geometrical optics	588
8.3. The ray and transport equations	593
8.4. The stratified medium	601
8.5. Fermat's principle	607
NUMERICAL SOLUTION OF ORDINARY DIFFERENTIAL EQUATIONS	616
8.6. Multistep methods	616
8.7. Runge-Kutta methods	628
8.8. Comparison of Runge-Kutta and predictor-corrector methods	632
8.9. Extrapolation	633
8.10. Systems of differential equations	634
8.11. The 'best' numerical method	635
CANONICAL PROBLEMS	636
8.12. Geometrical optics revisited	636
8.13. Focusing	637
8.14. Reflection by stratification	644
8.15. Edges	654
8.16. Edge rays	663
8.17. Uniformly valid approximations	668
8.18. Double edge diffraction	678
8.19. Emission from a waveguide	694
8.20. The wedge	711
8.21. The effect of curvature	718
8.22. Generalization	737
8.23. Optimal curvature	742
8.24. The diffraction matrix for a curved boundary	743
8.25. Diffraction by a discontinuity in curvature	746
8.26. Reflector antennas	757
LEAKY RAYS	763
8.27. Gaussian beams and complex sources	763
8.28. Complex rays	768
8.29. Optical fibres	771
9. SOURCE DETECTION	783
9.1. General considerations	783
INVERSE SCATTERING	786
9.2. Low frequencies	786
9.3. High frequencies	789
9.4. Scattering in the time domain	795
9.5. Moving targets	798
THE INVERSE SOURCE PROBLEM	801
9.6. Harmonic sources	801
9.7. Inhomogeneities	805
9.8. Statistical considerations	806
9.9. Correlation techniques	813
9.10. Far-field cross-correlation technique	816

HOLOGRAPHIC TECHNIQUES	823
9.11. Basic principles of holography	823
9.12. Location of an inhomogeneity	829
9.13. Field in the aperture of an antenna	830
9.14. Zeros of entire functions	834
SYNTHESIS OF RADIATION PATTERNS	837
9.15. General considerations	837
9.16. Synthesis by series expansion	839
9.17. Construction errors	842
9.18. Constrained aperture norm	844
9.19. Directivity	849
9.20. Penalty functions	851
ARRAY SIGNAL PROCESSING	852
9.21. Adaptive beam forming	852
9.22. Simultaneous multiple beams	858
9.23. Time-varying arrays	862
