Preface ix

Chapter 1 Dirac Formulation of Quantum Mechanics 1

1.1	Introduction	2
1.2	Ket Vectors	6
1.3	Scalar Product; Bra Vectors	8
1.4	Linear Operators	12
1.5	Hermitian Operators	15
1.6	The Eigenvalue Problem	16
1.7	Observables, Completeness, Expansion in Eigenkets; Dirac δ Function	21
1.8	Matrices	27
1.9	Matrix Representation of Kets, Bras, and Operators	28
1.10	Transformation Functions; Change of Representation	32
1.11	Quantization; Example of Continuous Spectrum	36
1.12	Measurement of Observables; Probability Interpretation	44
1.13	The Heisenberg Uncertainty Principle	47
1.14	Dynamical Behavior of a Quantum System	53
1.15	The Schrödinger Picture of Quantum Mechanics	56
1.16	The Heisenberg Picture	57

- 1.17 The Interaction Picture 61
- 1.18 Wave Mechanics 62
- 1.19 The Free Particle; Change in Time of Minimum Uncertainty Wave Packet 63

chapter **2** Elementary Quantum Systems 69

- 2.1 Introduction 70

part I The Harmonic Oscillator

- 2.2 The Oscillator in the Heisenberg Picture 71
- 2.3 The Energy-eigenvalue Problem for the Oscillator 76
- 2.4 Physical Interpretation of N , a , and a^\dagger ; Bosons and Fermions 79
- 2.5 Transformation Function from N to q Representation 84

part II Electron Spin

- 2.6 Pauli Spin Operators 85
- 2.7 Energy of Spin in Magnetic Field 90
- 2.8 Spin Operators in the Heisenberg Picture 92

part III Electrons in Electric and Magnetic Fields

- 2.9 Hamiltonian for Electron in Electromagnetic Field 93

chapter **3** Operator Algebra 97

- 3.1 Introduction 98

part I General Operators

- 3.2 Some General-operator Theorems 99

part II Boson Creation and Annihilation Operators

- 3.3 Normal Product, Normal-ordering Operator, and Normal Form 104
- 3.4 Algebraic Properties of Boson Operators 108
- 3.5 Solution of the Schrödinger Equation by Normal Ordering;
Driven Harmonic Oscillator 119
- 3.6 The Schrödinger Equation for Two Independent Sets of Boson Operators 124
- 3.7 Generating Function for Oscillator Eigenfunctions;
Minimum Uncertainty Wave Packets 126

part III The Pauli Spin Operators

- 3.8 Algebraic Properties of Spin- $\frac{1}{2}$ Operators 131

chapter 4 Quantization of the Electromagnetic Field 137

- 4.1 Introduction 138
- 4.2 Quantization of an LC Circuit with a Source 139
- 4.3 Quantization of a Lossless Transmission Line 145
- 4.4 Equivalence of Classical Radiation Field in Cavity to Infinite Set of Harmonic Oscillators 148
- 4.5 Quantization of the Radiation Field in Vacuum 156
- 4.6 Density of Modes 159
- 4.7 Commutation Relations for Fields in Vacuum at Equal Times 160
- 4.8 Zero-point Field Fluctuations 165
- 4.9 Classical Radiation Field with Sources 168
- 4.10 Quantization of Field with Sources 170

chapter 5 Interaction of Radiation with Matter 175

- 5.1 Introduction 176
- 5.2 Hamiltonian of an Atom in a Radiation Field 177
- 5.3 Time-dependent Perturbation Theory 178
- 5.4 Absorption of Radiation by an Atom 185
- 5.5 Induced and Spontaneous Emission by an Excited Atom 189
- 5.6 Theory of Natural Line Width 191
- 5.7 The Doppler Effect 197
- 5.8 Propagation of Light in Vacuum 202
- 5.9 Semiclassical Theory of Electron-spin Resonance 207
- 5.10 Collision Broadening of Two-level Spin System 211
- 5.11 Effect of Field Quantization on Spin Resonance 212

chapter 6 Quantum Statistics 219

- 6.1 Introduction 220
- 6.2 The Density Operator 222
- 6.3 Some Properties of the Density Operator 223
- 6.4 Equations of Motion for ρ 225
- 6.5 The Pure State 227
- 6.6 Entropy 228
- 6.7 Density Matrix for Spin- $\frac{1}{2}$ Particles 233

6.8	The Characteristic Function	237
6.9	The Poisson Distribution	238
6.10	The Exponential Distribution	242
6.11	Signal Plus Noise	245
6.12	Entropy of Poisson, Signal-plus-noise, and Noise States	248

chapter 7 Quantum Statistics of Attenuators and Linear Amplifiers **253**

7.1	Introduction	254
7.2	Model for Loss Mechanism; Phonons	255
7.3	Attenuator Equations of Motion	259
7.4	Characteristic Function for Attenuator; Cavity Bandwidth	261
7.5	Model for Maser	266
7.6	Maser Equations of Motion	268
7.7	Maser Characteristic Function; Noise Temperature	270
7.8	Steady-state Maser Solution	272
7.9	Parametric Amplifier and Frequency-converter Model	274
7.10	Statistical Properties of the Parametric Amplifier	277
7.11	Frequency-converter Characteristic Function	279

Appendixes

appendix A	Hamiltonian for Radiation Field in Plane-wave Representation	283
appendix B	Momentum of Field in Cavity	285
appendix C	Properties of Transverse δ Function	287
appendix D	Commutation Relations for D and B	290
appendix E	Heisenberg Equations of Motion for D and B	292
appendix F	Evaluation of Field Commutation Relations	294
appendix G	Evaluation of Sums in Equation (5.137)	296
appendix H	Approximate Solution of Attenuator Equations of Motion	299
