

2.13	Power flow from current element	29
2.14	Magnetic current element $I_m d\mathbf{l}$	30
2.15	Fields of magnetic current element $I_m d\mathbf{l}$ along z -axis calculated using magnetic current alone	30
2.16	Fields of magnetic current element calculated using magnetic current I_m and pole strength M	32
2.17	Power flow from magnetic current element	33
2.18	Filamentary and cylindrical dipoles and monopoles	34
2.19	Infinitesimal Hertzian dipole	34
2.20	Radiation resistance and input resistance of Hertzian dipole	35
2.21	Input impedance of Hertzian dipole	36
2.22	Short dipole of finite radius	36
3	Dipole and monopole antennas	39
3.1	Filamentary dipole of finite length	39
3.2	Centre-fed transmitting dipole of length $2H$	39
3.3	Short-circuited reflecting dipole of length $2H$	43
3.4	Open-circuited linear dipole of length $2H$	47
3.5	Output impedance of linear dipole of length $2H$	49
3.6	Impedance loaded linear dipole of length $2H$	50
3.7	Travelling wave current on filamentary dipole	53
3.8	Radiation pattern of linear dipole of length $2H$ with standing wave of current	54
3.9	General expression for fields of linear dipole of length $2H$ with standing wave of current	56
3.10	Transmitting and receiving power gains of dipole and monopole antennas	58
3.11	Filamentary half-wave dipole in corner reflector	62
4	Computer solutions of dipole and monopole antennas	65
4.1	Computer solutions of linear dipoles	65
4.2	Transmitting operation	66
4.3	Receiving operation	68
4.4	Monopole antenna	69
4.5	Computer solution of half-wave dipole in corner reflector	78
5	Loop antennas	84
5.1	Flux linking approach to rectangular receiving loop antenna	85
5.2	Flux cutting approach to rectangular receiving loop antenna	86
5.3	Electric field approach to rectangular receiving loop antenna	87
5.4	Input impedance of rectangular loop	96

5.5	Electric field approach to circular receiving loop antenna	99
5.6	Rectangular loop antenna as magnetic field probe	105
5.7	Loop antenna as direction finder	106
5.8	Screened loop antenna	108
5.9	Transmitting loop antenna	111
5.10	Radiation pattern of large rectangular loop	113
6	Helical antennas	118
6.1	Normal mode helical antennas	118
6.2	Analysis of small circular helical antenna – open helix	120
6.3	Analysis of small circular helical antenna – closed helix	122
6.4	Radiation resistance of open and closed small helical antennas	122
6.5	Axial mode circular helical antenna	123
6.6	Analysis of axial mode helical antenna	125
6.7	Linearly polarised helical antennas	138
7	Yagi–Uda antennas	140
7.1	Two dipole array	141
7.2	Long Yagi–Uda array with continuous distribution of short director elements	145
7.3	Experimental approach to Yagi–Uda antenna design	151
8	Frequency independent and logarithmically periodic antennas	157
8.1	Planar equiangular spiral antenna	159
8.2	Practical equiangular spiral antenna	162
8.3	Linearly polarised frequency independent antenna	164
8.4	Unidirectional linearly polarised frequency independent antenna	166
8.5	Triangular logarithmically periodic linearly polarised antenna	166
8.6	Logarithmically periodic dipole array	168
8.7	Network analysis of uniformly loaded periodic structure	171
8.8	Application of uniformly loaded periodic structure to logarithmically periodic dipole array	175
9	Noise power delivered by wire antennas	176
9.1	Noise power delivered to matched load of infinitesimal dipole in isotropic noise field	176
9.2	Noise power delivered to matched load of any antenna in isotropic noise field	178

9.3	Network representation of noise power delivered by wire antennas	181
10	Aperture antennas	189
10.1	Field equivalence theorem	190
10.2	Equivalent currents over spherical surface of radius a for original current element	191
10.3	Application and simplification of the equivalence theorem applied to aperture antennas	199
10.4	Further comparison of three aperture field techniques	201
10.5	Radiation due to elemental area of magnetic current in infinite ground plane	202
10.6	Radiation fields due to finite distribution of magnetic current in infinite ground plane	203
10.7	Radiation due to elemental area of electric current in infinite magnetic ground plane	205
10.8	Radiation fields due to finite distribution of electric current in infinite magnetic ground plane	206
10.9	Radiation fields due to combined magnetic and electric currents	207
11	Angular spectrum of plane waves	210
11.1	Angular spectrum for one-dimensional slot	210
11.2	Infinite slot of width $2a$ in planar conducting sheet	214
11.3	Angular spectrum for two-dimensional aperture	223
11.4	Radiation field from two-dimensional aperture in conducting plane	227
11.5	Circular aperture of radius a in planar conducting sheet	229
11.6	Radiation fields of uniformly excited circular aperture	237
11.7	Power gain of uniformly excited circular aperture	238
11.8	Radiation fields of uniformly excited rectangular aperture	239
11.9	Power gain of uniformly excited rectangular aperture	241
11.10	Measured radiation patterns	242
12	Waveguide radiators	244
12.1	Radiation pattern of rectangular waveguide carrying TE_{10} mode	245
12.2	H -plane sectoral horn	248
12.3	Power gain of E -plane sectoral horn	253
12.4	Power gain of pyramidal horn	253
12.5	Cylindrical waveguide: derivation of wave equation	254

12.6	Cylindrical waveguide: solution of wave equation for TE modes	255
12.7	Tangential electric and magnetic fields in aperture of cylindrical waveguide carrying TE_{11} mode	257
12.8	Radiation pattern of cylindrical waveguide carrying TE_{11} mode	259
13	Paraboloidal reflector	266
13.1	Equations of parabola	266
13.2	Paraboloid excited by normally incident uniform plane wave	269
13.3	Analysis of fields produced by paraboloid irradiated by normally incident plane wave	271
13.4	Scattered magnetic fields on axis	273
13.5	Scattered magnetic field at focus	274
13.6	Scattered electric fields on axis including focus	275
13.7	Asymmetry of scattered fields on axis about focus	276
13.8	Numerical values of scattered fields on axis for normally irradiated paraboloid	277
13.9	Focal plane magnetic fields for paraboloid with normally incident plane wave	279
13.10	Focal plane electric fields for paraboloid with normally incident plane wave	286
13.11	Power flow across focal plane	291
14	Receiving paraboloidal reflector with feed	296
14.1	Infinitesimal dipole feed	296
14.2	Receiving radiation pattern of paraboloid with infinitesimal dipole feed	298
14.3	Power coupling between apertures	300
14.4	Coupling between paraboloid and TE_{11} circular cylindrical wave-guide feed	303
14.5	Computed aperture efficiency for cylindrical waveguide carrying TE_{11} mode placed at focus	305
14.6	Coupling between paraboloid and HE_{11} mode corrugated waveguide feed	307
14.7	Signal to noise ratio of receiving paraboloidal reflector plus feed	309
15	Analysis of transmitting paraboloids	312
15.1	Radiation pattern of paraboloid with current element feed – aperture field approach	312

15.2	Radiation pattern of paraboloid with current element feed – current distribution approach	318
15.3	Power gain on axis of paraboloid excited by y -directed current element	324
15.4	Radiation pattern of paraboloid excited by current element feed	325
15.5	Reflected fields from paraboloid with incident field ($E_\theta(\theta, \phi) + E_\phi(\theta, \phi)$)	326
15.6	Radiation from paraboloid using TE_{11} mode cylindrical waveguide feed	327
15.7	Power gain of paraboloid excited by TE_{11} mode cylindrical waveguide feed	330
16	Cassegrain and offset reflector analysis	333
16.1	Cassegrain antennas	333
16.2	Hyperboloidal reflector	334
16.3	Radiation pattern of hyperboloid with current element feed – current distribution approach	338
16.4	Forward scattered field of hyperboloid with cylindrical waveguide feed	346
16.5	Offset reflector antennas	348
16.6	Tangential electric fields in focal aperture plane of offset paraboloid	353
16.7	Offset paraboloid radiation pattern	354
