

Contents

Chapter 1. Basic Relations	1
1-1. The Wave Nature of Thermal Radiation, 1	
1-2. The Energy Transmitted by Electromagnetic Waves, 7	
1-3. The Stokes Parameters, 9	
1-4. The Intensity of Radiation, 15	
1-5. The Black Body and Black-Body Radiation Intensity, 16	
1-6. The Black-Body Emissive Flux, 20	
1-7. Radiation to and from a Volume Element, 25	
1-8. Radiation to and from a Surface Element, 34	
References, 48	
Notes, 50	
Chapter 2. Radiative Properties of Materials	55
2-1. Laws of Reflection and Refraction, 55	
2-2. Prediction of Radiative Properties of Ideal Surfaces, 57	
2-3. Prediction of Radiative Properties of Rough Surfaces, 69	
2-4. Scattering and Absorption of Radiation by Spherical Particles, 74	
2-5. Refractive Indices of Materials, 84	
2-6. Absorption of Radiation by Gases, 87	
2-7. Experimental Data on Radiative Properties, 100	
References, 115	
Notes, 120	

Chapter 3. View Factors	121
3-1. Definition of Diffuse View Factors, 121	
3-2. Determination of Diffuse View Factor by Direct Integration, 125	
3-3. Determination of Diffuse View Factor by Contour Integration, 128	
3-4. Diffuse View Factor Between an Elemental Surface and an Infinitely Long Strip, 135	
3-5. The Diffuse View Factor Algebra, 136	
3-6. Determination of Diffuse View Factor by Differentiation, 142	
3-7. The Specular View Factors, 146	
References, 152	
Notes, 153	
Chapter 4. Radiative Exchange in an Enclosure—Simplified Zone Analysis	155
4-1. Equations of Radiative Heat Exchange for a General Enclosure, 157	
4-2. Simplified Zone Analysis for Enclosures with Diffusely Reflecting Surfaces, 158	
4-3. Simplified Zone Analysis for Gray Enclosures with Surfaces Having Both Diffuse and Specular Reflectivity Components, 166	
4-4. Applications of Simplified Zone Analysis, 169	
References, 175	
Notes, 177	
Chapter 5. Radiative Exchange in an Enclosure—Generalized Zone Analysis	178
5-1. Generalized Zone Analysis for Enclosures with Diffusely Reflecting Surfaces, 179	
5-2. Generalized Zone Analysis for a Gray Enclosure with Surfaces Having Both Diffuse and Specular Reflectivity Components, 182	
5-3. Method of Solution of Fredholm Type Integral Equations, 183	
5-4. Radiative Exchange Between Two Parallel Plates, 188	
5-5. Radiative Exchange Between Two Parallel, Coaxial, Circular Disks, 193	

5-6.	Radiative Exchange Inside a Cylindrical Enclosure, 197	
5-7.	Effects of Specular Reflection on Radiative Heat Transfer, 203	
	References, 210	
	Notes, 211	
Chapter 6.	Radiation and Conduction in Nonparticipating Media	212
6-1.	Radiating Longitudinal Plate Fins, 213	
6-2.	Effects of Specular Reflection on Radiative Heat Transfer, 220	
6-3.	Radiating Plate Fins with Interaction Between the Fin Base and Fin Surface, 228	
	References, 231	
	Notes, 232	
Chapter 7.	Radiation and Convection in Nonparticipating Media	233
7-1.	Laminar Boundary Layer Flow Along a Flat Plate with Radiation Boundary Condition, 234	
7-2.	Forced Convection inside a Circular Tube with Radiation Boundary Condition, 239	
	References, 246	
	Notes, 247	
Chapter 8.	Basic Relations for Radiative Heat Transfer in Participating Media	249
8-1.	Equation of Radiative Transfer, 249	
8-2.	Radiative Equilibrium, 256	
8-3.	Formal Integration of Equation of Radiative Transfer, 257	
8-4.	Equation of Radiative Transfer for Plane-Parallel Medium, 258	
8-5.	Equation of Radiative Transfer for Cylindrical and Spherical Symmetry, 261	
8-6.	Formal Solution of Equation of Radiative Transfer in Plane-Parallel Geometry with Azimuthal Symmetry, 264	
8-7.	Boundary Conditions, 273	
8-8.	Equations for Boundary Surface Intensities, 276	
8-9.	Equation for the Source Function, 280	

8-10. Radiative Equilibrium in a Plane-Parallel Slab— Gray and Nongray Cases, 281	
8-11. Plane-Parallel Slab with Internal Energy Sources, 295	
8-12. Problems with No Azimuthal Symmetry, 303 References, 309 Notes, 310	
Chapter 9. Approximate Methods in the Solution of the Equation of Radiative Transfer	313
9-1. Optically Thin Limit Approximation, 314	
9-2. Optically Thick Limit (Rosseland or Diffusion) Approximation, 316	
9-3. A Modified Diffusion Approximation to Deter- mine Net Radiative Heat Flux in a Medium in Radiative Equilibrium, 319	
9-4. Eddington Approximation, 327	
9-5. Schuster-Schwarzschild Approximation, 330	
9-6. Exponential Kernel Approximations, 332	
9-7. Spherical Harmonics Method, 334	
9-8. Moment Method, 343 References, 346 Notes, 348	
Chapter 10. Case's Normal-Mode Expansion Technique in the Solution of the Equation of Radiative Transfer	349
10-1. Normal Modes of the Homogeneous Equation in Isotropic Scattering, 350	
10-2. Expansion of an Arbitrary Function in Terms of Normal Modes, 357	
10-3. The Orthogonality of Normal Modes, 358	
10-4. Normalization Integrals, 363	
10-5. Determination of Expansion Coefficients, 365	
10-6. A Summary of Integrals Involving Normal Modes, 372	
10-7. Application to Radiative Heat Transfer for $\omega < 1$, 377	
10-8. Particular Solutions of Equation of Radiative Transfer in Plane-Parallel Geometry for Isotropic Scattering, 384 References, 388 Notes, 389	

Chapter 11. Pure Radiative Heat Transfer in Participating Media	393
11-1. Temperature Distribution and Radiative Heat Flux in a Plane-Parallel Slab in Radiative Equilibrium, 394	
11-2. Temperature Distribution and Radiative Heat Flux in a Plane-Parallel Slab with Uniformly Distributed Internal Energy Sources, 400	
11-3. The Radiative Heat Flux in an Absorbing, Emitting Slab at a Prescribed Temperature, 404	
11-4. Absorbing, Emitting, Isotropically Scattering Slab at a Prescribed Temperature—Solution with P_1 -Approximation, 409	
11-5. Absorbing, Emitting, Scattering Slab at Prescribed Temperature—Numerical Solution Using the Gaussian Quadrature, 417	
11-6. Absorbing, Emitting, Isotropically Scattering Slab at Prescribed Temperature—Solution by Normal-Mode Expansion Technique for $\omega < 1$, 421	
11-7. Slab with Distributed Internal Energy Sources—Solution by Normal-Mode Expansion Technique, 428	
11-8. Reflectivity and Transmissivity of Semitransparent Media, 436	
References, 444	
Notes, 447	
Chapter 12. Conduction with Radiation in a Participating Medium	451
12-1. Formulation of Simultaneous Conduction and Radiation, 452	
12-2. Conduction and Radiation in an Optically Thick Slab, 458	
12-3. Conduction and Radiation in an Absorbing and Emitting Slab—Exact Treatment, 461	
12-4. Conduction and Radiation in an Absorbing, Emitting and Scattering Slab—Exact Treatment, 464	
12-5. Ablation and Radiation in an Absorbing, Emitting, and Scattering Medium, 472	
12-6. Experimental Work, 481	
References, 482	
Notes, 484	

Chapter 13.	Boundary Layer Flow with Radiation in a Participating Medium	485
13-1.	Equations of Fluid Dynamics and Energy for a Radiating Fluid, 486	
13-2.	Nondimensional Radiation Parameters, 492	
13-3.	Transformation of the Boundary Layer Equations, 496	
13-4.	Optically Thick, Incompressible Laminar Boundary Layer Flow over a Wedge, 507	
13-5.	Absorbing, Emitting, Compressible Laminar Boundary Layer Flow over a Flat Plate, 513	
13-6.	Laminar Free Convection from a Vertical Plate for an Absorbing, Emitting, and Scattering Fluid, 522	
	References, 532	
	Notes, 535	
Chapter 14.	Channel Flow with Radiation in a Participating Medium	540
14-1.	Absorbing, Emitting Couette Flow, 541	
14-2.	Absorbing, Emitting Flow Between Two Parallel Plates, 543	
14-3.	Absorbing, Emitting, Scattering, Thermally Developing Slug Flow Between Two Parallel Plates, 548	
	References, 555	
Appendix	The Exponential Integrals $E_n(x)$	557
	References, 563
