

CONTENTS

FOREWORD	v
PREFACE	vii
Chapter I. INTRODUCTION	1
1. Phase Velocity and Group Velocity	1
2. Examples and Discussion: Dispersive Media	3
3. Groups and Signals	7
4. Signal Velocity, First Attempts	10
5. Actual Measurements of the Velocity of Light	13
6. Havelock's Pamphlet	14
7. General Remarks	15
Chapter II. ABOUT THE PROPAGATION OF LIGHT IN DISPERSIVE MEDIA, BY A. SOMMERFELD	17
1. Introduction and Results	17
2. The Incident Signal	23
3. General Solution of the Problem	28
4. Discussion of the Obtained Solution	30
5. Uniqueness of the Solution and Boundary Conditions	35
6. The Forerunners	39
Chapter III. ABOUT THE PROPAGATION OF LIGHT IN DISPERSIVE MEDIA, BY L. BRILLOUIN	43
1. How to Use the Saddle-Point Method of Integration	43
2. Examination of the Complex n -Plane	46
3. Location of the Saddle Points	50
A. The region about the origin	51
B. Saddle points far from the origin	54
4. Successive Motion of the Saddle Points as a Function of Time. Choice of the Path of Integration	57

5. The Forerunners	63
A. Saddle points near the origin	64
B. Saddle points at a great distance	71
6. Signal Velocity	74
7. Summary of Results	79
8. The Method of the Stationary Phase Compared to the Saddle Point Method	81
Chapter IV. PROPAGATION OF ELECTROMAGNETIC WAVES IN MATE- RIAL MEDIA	85
1. Definitions: Role of a Dielectric Coefficient Depend- ing on Density and Temperature	85
2. Dependence of the Dielectric Coefficient on Fre- quency; Evaluation of the Electrical Energy	88
3. Waves; Phase Velocity; Energy Density of a Plane Wave	93
4. The Group Velocity U	96
5. Velocity of Energy Transport U_1	98
6. Signal Velocity, S	100
7. The Forerunners	105
8. Summary of the Most Important Results; Generaliza- tion to Other Types of Waves	110
Chapter V. WAVE PROPAGATION IN A DISPERSIVE DIELECTRIC	113
1. Formula of Lorentz-Lorenz	113
2. Material Medium of Low Density, Consisting of Harmonic Oscillators	116
3. Propagation of the Waves in the Medium	119
4. The Velocities U , U_1 , and S in the Medium	121
5. The Forerunners	124
6. A Real Transparent Medium, Having Several Absorp- tion Bands	128
7. Quantized Atomic States, Kramers' Dispersion Formula	130
8. The Relation between the Problem Treated and the Analogous Technical Problems	133
Chapter VI. WAVES IN WAVE GUIDES AND OTHER EXAMPLES	139
1. Guided Waves	139

CONTENTS

xi

2. Acoustic Waves	139
3. Rectangular Tube	143
4. Physical Significance of Guided Waves	144
5. Electromagnetic Guided Waves	148
6. Some Other Typical Examples	150
AUTHOR INDEX	151
BOOKS PUBLISHED BY L. BRILLOUIN	152
