

CONTENTS

Preface	iv
Greetings from the Mayor of Sendai	v
Conference information	vi
Conference committee	vii
Chapter 1. Advanced Technology in Electromagnetic Wave Sources	
1-1 High Frequency Gyrotrons for ECRH : Progress at MIT K.E. Kreischer, T.L. Grimm, W.C. Guss, R.J. Temkin and K.Y. Xu	3
1-2 The Peniotron K. Yokoo and S. Ono	11
1-3 HEMT T. Misugi	19
1-4 Tunnnett J. Nishizawa	27
Chapter 2. Advanced Technology in Electromagnetic Wave Circuits and Systems	
2-1 Transmission Line Analysis for Microwave Structures W.J.R. Hoefer	39
2-2 Millimeter Wave Monolithic Integrated Circuits M. Aikawa	49
2-3 Millimeter Wave Integrated Circuits using Nonradiative Dielectric Waveguide T. Yoneyama	57
2-4 Superconducting Array Antennas S. Adachi and K. Sawaya	67
2-5 High-speed Optical Waveguide Modulators S.K. Korotky	77
2-6 Ultrasmall Optical Devices and Components S. Kawakami	79
Chapter 3. Advanced Technology in Electromagnetic Wave Detectors and Systems	
3-1 Power Monitor Systems for Submillimeter Waves and Far Infrared D.H. Martin and G.W. Poulson	87

3-2	Characteristics of High Tc Superconducting Devices for Millimeter and Submillimeter Waves J. Chen, H. Suzuki, H. Kurosawa and T. Yamashita	97
3-3	The Schottky Barrier Diode and Its Millimeter and Submillimeter Wave Applications K. Mizuno and T. Suzuki	103
3-4	Technology for Millimeter-Wave Imaging D. Rutledge	113
Chapter 4. Advanced Technology in Electromagnetic Wave Applications		
4-1	Free Electron Laser K. Mima	123
4-2	Millimeter Wave Technology Developments for Plasma Diagnostics N.C. Luhman, Jr.	129
4-3	Spread Spectrum Communication System for Highly Reliable Wireless LAN N. Mikoshiba and K. Tsubouchi	131
4-4	Traveling Wave Semiconductor Devices H.L. Hartnagel	137
4-5	Ultra High Speed LSI T. Ohmi	147
4-6	Millimeter Wave Applications in The U.S.A. T. Itoh	149
4-7	Optical Fiber Communications T. Kimura	157
Chapter 5. Advanced Technology in Materials for Electromagnetic Wave Applications		
5-1	Microwave Characterization of High-Temperature Superconducting Thin Films A.T. Findikoglu, A. Fathy, D. Kalokitis, V. Pendrick, A. Inam, R. Ramesh, B. Wilkens, J.B. Bamer, D. Hart, X.X. Xi, Q. Li, W.L. Mclean and T. Venkatesan	171
5-2	Recent Development of Dielectric Resonator Materials and Filters in Japan K. Wakino	187
5-3	Dielectric Materials for Infrared Applications S. Yoshida	197
5-4	Quantum Effect Ultrafast Semiconductor Devices H. Sakaki	207
Chapter 6. Public Lectures on Advanced Technology for Light and Microwaves		
6-1	Highlights in the History of Electromagnetic Wave Engineering: Radiowaves, Microwaves, and Lightwaves	

A.A. Oliner	211
6-2 Technical Systems for Communication and Broadcatsing Satellites H. Uda and A. Iso	219
6-3 Present and Future Aspects of Optical Communications C.K. Kao	237
6-4 Foresight of Professor Hidetsugu Yagi in Electromagnetic Wave Engineering Y. Mushiake	241
