Preface	xiii
 PART A. FUNDAMENTALS	
Chapter 1. Introduction	3
Chapter 2. Refraction of radio waves in a plasma. Simplest case	7
2.1. Sellmeier's theory	7
2.2. Two types of waves in a Lorentzian plasma	9
2.3. Dispersion relations	11
2.4. Reflection and refraction	14
Chapter 3. Some effects of refraction	19
3.1. Phase velocity and phase path	19
3.2. Beacon measurements	21
3.3. Total reflection	22
3.4. Group velocity and group path	24
3.5. Pulse sounding	26
Chapter 4. Properties of a magnetized plasma	27
4.1. The principal polarizations	27
4.2. Generalized electric displacement	27
4.3. Ohm's law	29
4.4. Resistivity and conductivity	30
4.5. Description by eigenvalues	31
4.6. Dielectricity dyadic	32
Chapter 5. Electromagnetic waves in a cold gyrotropic plasma	33
5.1. Geometry of plane waves	33
5.2. Two methods for determining the characteristic polarizations	33
5.3. Geometry with included absorption influence	34
5.4. The characteristic polarizations specified	35
5.5. Discussion of the characteristic polarizations	37
5.6. Faraday effect	40
Chapter 6. Echoes from a plasma layer	43
6.1. Stratified plasma, reflection at normal incidence	43
6.2. The ionogram	46

Chapter 7. Propagation of radio waves in a cold magnetoplasma	53
7.1. Different dispersion formulae	53
7.2. A pole of the refractive index	56
7.3. A qualitative description	59
7.4. The field-aligned or Whistler mode	60
7.5. Whistling atmospherics	62
PART B. WAVE PROPAGATION IN THE IONOSPHERE	
Chapter 8. Propagation in the space between Earth and ionosphere (Deka- and hektometer-waves)	69
8.1. Terrestrial propagation of short radio waves: geometrical optics	70
8.2. The ray path	79
8.3. Attenuation of the skywave	84
8.4. Ionospheric propagation of hektometer waves	91
8.5. Ionospheric propagation of dekameter waves	98
Chapter 9. Propagation in the Earth-ionosphere waveguide (Kilometric and longer waves)	109
9.1. Very low frequency propagation	109
9.2. Propagation theory	116
9.3. Waveguide boundary conditions and their variations	119
9.4. Resonances in the earth-ionosphere waveguide	127
Chapter 10. Propagation through the ionosphere	139
10.1. Ground-to-satellite phase-propagation	140
10.2. Differential Doppler effect	145
10.3. Wave polarization changes in the ionosphere	148
10.4. Propagation in the intermediate (HF) frequency range	152
10.5. Penetration at low frequencies	154
Chapter 11. The real ionosphere: irregularities and acoustic-gravity waves	159
11.1. Acoustic waves	160
11.2. Gravity waves: generalities	166
11.3. Gravity waves in the upper atmosphere	170
11.4. Acoustic-gravity and electromagnetic waves: a comparison	173
11.5. Gravity waves under realistic atmospheric conditions	182
Chapter 12. Propagation in structured media	191
12.1. Large scale gradients and their effects	191
12.2. Medium scale irregularities and their effects	198
12.3. Measuring ionospheric drifts	200
12.4. Small scale irregularities and their effects	210

PART C. WARM, MULTI-COMPONENT PLASMA

Influence of Plasma Composition and Temperature	223
Chapter 13. Influence of plasma composition and temperature	225
13.1. Specification of collisional effects	225
13.2. Transfer collision frequency	226
13.3. Averaging over the velocity distribution	230
13.4. Fitting with experimental data	231
13.5. Electron-molecule interaction	235
13.6. Coulomb interaction	235
13.7. Advanced description of the effects of collisional interaction in ionospheric plasmas	237
13.8. The Sen-Wyller dispersion equation	240
Chapter 14. Kinetic theory of a Lorentz plasma	245
14.1. Collisionless conditions	245
14.2. Collisions between electrons	248
14.3. Collisions with heavier particles	252
14.4. The 'collision integral'	254
Chapter 15. The Boltzmann equation of a compressible plasma	257
15.1. A simple solution of the Boltzmann equation	258
15.2. Dispersion formula of a warm plasma	260
15.3. Dispersion characteristics of a warm plasma	262
15.4. The character of the waves on the third sheet	265
15.5. Coupling with ion sound waves	272
Chapter 16. Waves in a warm isotropic plasma	273
16.1. Dielectric permittivity	273
16.2. Dispersion relations	275
16.3. Longitudinal waves: non-collisional attenuation	278
Chapter 17. Waves in a warm gyrotropic plasma	281
17.1. Multipole disturbance term	281
17.2. Longitudinal oscillations and transverse propagation modes	284
17.3. Very low frequency modes	285
17.4. Temperature effects	290
Chapter 18. Plasma waves	293
18.1. Longitudinal plasma waves in the absence of a magnetic field	293
18.2. Gyro-modes (Bernstein waves)	298
18.3. Magneto-dynamic waves	299
18.4. Alfvén waves	301

PART D.**NONLINEAR PHENOMENA AND UNSTABLE CONDITIONS**

Non-linearities and instabilities	307
Chapter 19. Plasma under moderate energy input	309
19.1. Joule heating	309
19.2. Consequences of wave-increased collisions	313
Chapter 20. Non-linear phenomena	319
20.1. Effects in non-linear circuits	319
20.2. Instability and parametric phenomena	321
20.3. Plasma density changes caused by electromagnetic waves	324
20.4. Mode coupling – general theory	325
20.5. Three wave interaction	327
Chapter 21. Incoherent scatter	329
21.1. The scattering cross section	330
21.2. The backscattered spectrum (collision neglected)	332
21.3. Effects of collisions and of a magnetic field	333
21.4. Scatter spectra under realistic ionospheric conditions	334
21.5. Plasma parameters observable with incoherent scatter techniques	336
21.6. Some results obtained with incoherent scatter techniques	338
Chapter 22. Instabilities and resonances	349
22.1. Instability conditions in the ionospheric plasma	350
22.2. Streaming instabilities	353
22.3. Field induced instability	360
22.4. Mode coupling	361
22.5. Resonances observed in topside ionograms	363
22.6. Radio frequency plasma probes	365
Chapter 23. Natural (low frequency) emissions	377
23.1. Observed phenomena	377
23.2. Interaction with precipitating particles	381
23.3. Auroral kilometric radiation (AKR)	383
23.4. Triggered VLF emission	386
Chapter 24. Heavy disturbances	387
24.1. Artificial heating with radio waves	387
24.2. Natural heating phenomena in the ionosphere	394
Appendix I: Vectors and dyadics	401
I.1. Vector algebra	401
I.2. Vector analysis	403
Appendix II: Dyadics	407

<i>Contents</i>	xi
II.1. General introduction of dyadics	407
II.2. Special dyadics	409
II.3. Multiplication of dyadics	409
Appendix III. Eigenvalues of dyadics	411
Appendix IV. Ray tracing	415
IV.1. Group and phase velocity	415
IV.2. H.G. Booker's "quartic"	416
IV.3. K. Suchy's formulation of the problem	417
IV.4. H. Poeverlein's construction of the group path	419
IV.5. Analytical vs. numerical methods	422
Appendix V. Conductivity of magnetized plasmas	425
Appendix VI. Special functions	427
VI.1. Cylindrical functions	427
VI.2. Spherical functions	431
VI.3. Other integral functions	435
VI.4. Hypergeometric functions	437
VI.5. Integral functions of the kinetics theory	440
Appendix VII. Partial reflection and penetration	445
Bibliography	451
Acknowledgements	455
