

Table of Contents

1. General Introduction	1
2. The Bernoulli Problem	5
2.1 The Physical Concept of Probability.....	5
2.2 Distribution Laws for Random Variables.....	10
2.3 The Binomial Distribution Law	12
2.4 Examples of Applications of the Binomial Law.....	16
2.5 Shot Effect. The Poisson Distribution.....	19
2.6 The De Moivre-Laplace Limit Theorem.....	22
2.7 Normal or Gaussian Distribution Law.....	24
2.8 Exercises.....	30
3. Random Pulses	35
3.1 Statement of the Problem.....	35
3.2 Characteristic Functions.....	39
3.3 Distribution Function for a Poisson Pulse Process.....	44
3.4 Covariance.....	51
3.5 Some Generalization of the Pulse Problem.....	58
3.6 Impulse Noise and the Central Limit Theorem.....	65
3.7 Exercises.....	68
4. Random Functions	83
4.1 General Definitions.....	83
4.2 Markov Processes.....	87
4.3 Stationary Processes.....	91
4.4 Moments of Random Functions.....	92
4.5 Correlation Theory.....	95
4.6 Probabilistic Convergence.....	99
4.7 Ergodicity of Random Processes.....	108
4.8 Exercises.....	118
5. Markov Processes	121
5.1 Preliminary Remarks.....	122
5.2 Smoluchowski Equation.....	124

5.3	Markov Process with Discrete States	128
5.4	Transition from Discrete Sequence to Processes with Continuous Sets of States. Rayleigh Distribution	132
5.5	Some Generalizations of the Rayleigh Distribution	137
5.6	Continuous Markov Processes. The Einstein-Fokker-Planck Equation	144
5.7	Generalization to Multivariate Random Functions	152
5.8	Fluctuations in the Thomson Vacuum-Tube Oscillator	158
5.9	Fluctuations at Large Self-Oscillation Amplitudes	168
5.10	Rotational Brownian Motion. Random Refraction of a Ray	175
5.11	Stepwise Markov Processes. The Kolmogorov-Feller Equation....	180
5.12	First Passage Problem	186
5.13	Exercises	192
6.	Stochastic Differential Equations	207
6.1	Statement of the Problem	208
6.2	Random Functions with Independent Increments	209
6.3	Simple Example of a Stochastic Differential Equation	213
6.4	General Case of First-Order Equations and a Set of Such Equations for Gaussian Delta-Correlated Action	220
6.5	Stochastic Equation for Random Actions with Arbitrary Distribution Laws	227
6.6	Exercises	234
	References	245
	Subject Index	249
