<b>Introduction</b>	1
<b>1. The Pseudo-Photon Method</b>	7
1. Introduction	7
2. Radiation of a Relativistic Electron in the Atomic Field	11
3. Angular Distribution and Polarization of Photons	24
4. Electron-Positron Pair Production	29
5. The Range of Applicability of the Pseudo-Photon Method	32
<b>2. Coherent Bremsstrahlung in a Crystal</b>	34
6. Introduction	34
7. Derivation of Initial Formulas for Bremsstrahlung Cross Sections and Electron-Positron Pair Production in a Crystal	47
8. Coherent Term of the Bremsstrahlung and Electron-Positron Pair Production Cross Sections in a Crystal	59
9. Investigation of Interference Cross Sections	66
10. Angular Distribution and Problems of Polarization	80
11. Experiments on Coherent Radiation	96
12. Radiation in a Thin Crystal and the Range of Applicability of the Theory	107
<b>3. Radiation Processes at High Energies in Amorphous Media (The Density Effect)</b>	114
13. Introduction	114
14. Effect of Polarization of the Medium on Bremsstrahlung	116
15. Formulas for Intensity and Angular Distribution, Including Polarization of the Medium	119
16. Radiation Corrections for Coulomb Scattering, Considering the medium	135

17. Certain Aspects of the Theory of Multiple Scattering . . . . .	141
18. Effect of Multiple Scattering and Polarization of the Medium on Bremsstrahlung in an Amorphous Substance (Qualitative Treatment) . . . . .	149
19. Effect of Multiple Scattering on Bremsstrahlung and Pair Production at High Energies (Accurate Classical Theory) . . . . .	158
20. Summary of the Results of Quantum-Mechanical Calculation and Angular Distribution of Photons . . . . .	165
21. Effect of Medium Absorption on Radiation Processes in an Amorphous Medium . . . . .	168
22. Experimental Studies on Radiation Processes in a Condensed Medium . . . . .	188
<b>4. Transition Radiation . . . . .</b>	<b>194</b>
23. Introduction . . . . .	194
24. Derivation of Formulas for Transition Radiation . . . . .	200
25. Transition Radiation in a Plate . . . . .	213
26. Advanced Theories of Transition Radiation . . . . .	223
27. Experiments to Study Transition Radiation . . . . .	242
<b>5. Radiation of Particles Passing Uniformly Through Heterogeneous Media . . . . .</b>	<b>263</b>
28. Resonance Radiation . . . . .	264
29. Experiments on Resonance Radiation . . . . .	336
30. Radiation of a Charged Particle on Random Heterogeneities	366
31. Diffraction Radiation of Fast Particles . . . . .	376
<b>Appendices . . . . .</b>	<b>391</b>
I Transformation of the Bethe-Heitler Formula to the Vari- ables $\mathbf{q}$ . . . . .	391
II Consideration of Thermal Vibration . . . . .	400
III Fundamental Properties of the Reciprocal Lattice and Calcula- tion of the Structure Factor . . . . .	405
IV Quantum Electrodynamics in the Medium . . . . .	411
V Analysis of Integral Equation (19.11) . . . . .	421
VI Integration of Equation (19.10) . . . . .	425

CONTENTS	ix
VII Derivation of Formulas for Calculating Ionization Losses by the Pseudo-Photon Method . . . . .	430
Principal Notation . . . . .	437
<b>References</b> . . . . .	442
<b>Index</b> . . . . .	455
