CONTENTS

Preface xi
Acknowledgments xiii

1. Electromagnetic Theory

1.1 Maxwell's Equations 1
1.2 Macroscopic Properties of Matter 4
1.3 Energy and Power 6
1.4 Boundary Conditions 7
1.5 The Wave Equation 9
1.6 Electromagnetic Potentials in Homogeneous Isotropic Media 12
1.7 Uniqueness Theorem for Electromagnetic Boundary Value Problems 16
1.8 The Dirac Delta Function 17
Problems 20
References 21

2. Plane Waves in Homogeneous Isotropic Media

2.1 General Properties of Plane Waves 22
2.2 Spectral Decomposition 25
2.3 Inhomogeneous Plane Waves 28
2.4 Reflection and Refraction 30
2.5 The Zenneck Surface Wave 33
2.6 The Lateral Wave 36
2.7 The Impedance Concept and Boundary Conditions 39
2.8 System of Parallel Plane Layers 40
Problems 43
References 44

3. Plane Waves in Homogeneous Anisotropic Media

3.1 Electrically Anisotropic Media 45
3.2 Magnetically Anisotropic Media 47
3.3 Plane Waves in Magnetoplasmas 49
3.4 Plane Waves in Magnetized Ferrites 57
Problems 61
References 63

4. Plane Waves in Inhomogeneous Stratified Media

4.1 The Characteristic Differential Equations 64
4.2 General Solution 67
4.3 Specific Inhomogeneity Profiles 70
4.4 The WKB Approximation 79
4.5 Geometrical Optics Approximation 88
Problems 97
References 98

5. Spectral Representation of Elementary Sources

5.1 Integration of the Wave Equation 100
5.2 Spectral Representation of Dipoles and Line Sources 115
5.3 Asymptotic Evaluation of Integrals 117
Problems 130
References 132

6. Field of a Dipole in a Stratified Medium

6.1 Vertical Electric Dipole above an Interface 133
6.2 Vertical Electric Dipole above a Conducting Earth (Sommerfeld Problem) 144
6.3 Vertical Electric Dipole above a Slightly Conducting Plasma 161
6.4 Vertical Electric Dipole in a Three-Layer Medium 170
Problems 178
References 182

7. Radiation in Anisotropic Plasma

7.1 Electric Dipole in Magnetoplasma 183
7.2 Magnetic Line Source in Magnetoplasma 189
7.3 Radiation from a Magnetic Current Line Source in the Presence of a Separation Boundary 193
Problems 206
References 208

8. Green's Function Method of Solution

8.1 Self-Adjoint Boundary Value Problems 209
8.2 Examples of Eigenfunction Expansion 216
8.3 Formal Green's Function Procedure 229
8.4 Examples of Green's Function Construction 232
Problems 252
References 254

9. Axial Currents and Cylindrical Boundaries

9.1 General Considerations 255
9.2 Perfectly Conducting Wedge and an Axial Current Distribution 262
9.3 Cylindrically Tipped Wedge and an Axial Current Distribution 270
9.4 Perfectly Conducting Circular Cylinder and an Axial Current Distribution 272
9.5 Dielectric Circular Cylinder and a Line Source 274
Problems 280
References 282

10. Diffraction by Cylindrical Structures

10.1 Circular Cylinder 283
10.2 Cylindrically Tipped Wedge 306
10.3 The Wedge 308
10.4 The Wiener–Hopf Technique 316
Problems 328
References 328

11. Apertures on Cylindrical Structures

11.1 Apertures on Planes 330
11.2 Apertures on Circular Cylinders 337
11.3 Apertures on Wedges 349
Problems 362
References 362

Subject Index 363
