CONTENTS

Chapter		*Page*
Preface		x
The more important symbols used		xiii
Introduction		xix
1	**The random medium and its statistical properties**	1
1-1	The local refractive index	1
1-2	Assembly averages	2
1-3	The statistics of the refractive index fluctuations	3
1-4	The autocorrelation function and scale size of the medium	4
1-5	The weakly irregular medium	6
1-6	The statistics of the wave field	7
1-7	Moments of the wave field	7
2	**The random field E as a set or spectrum of plane waves**	9
2-1	A pair of plane waves	9

Chapter		Page
2-2	Phase amplitude diagrams and the phase reference .	12
2-3	The random field as a spectrum of plane waves ...	13
2-4	The distance or free space propagation effect	14
2-5	The propagation of moments in empty space	16
3	**The effect of scattering by the medium**	19
3-1	The two conditions (*a*) the angles of scatter are always small, (*b*) the medium is only weakly scattering	19
3-2	The effect of scattering	20
3-3	The first moment	22
3-4	The higher moments	24
3-5	The equations of propagation of the moments	25
4	**The mean field, power, field coherence, and the angular spectrum**	27
4-1	The average or mean field $\langle \mathbf{E} \rangle$	27
4-2	Scattered and unscattered fields and power	29
4-3	Spatial coherence of the electric field and total power	30
4-4	The spatial frequency spectrum	35
5	**The frequency correlation function and pulse propagation**	37
5-1	The pulse shape and the frequency correlation function	38
5-2	The frequency correlation function	40
5-3	Solution by the method of successive scatters	41
5-4	Properties of the contributions from different orders of scattering	42
5-5	The limiting form of the pulse after many scatters ...	46
5-6	Conclusion	48
6	**Photon flux, probability theory, and stochastic ray paths**	51
6-1	The angular spectrum and directional photon flux ..	52
6-2	The limit of very many scatters and asymptotic forms of the moment equations	55
6-3	Rays in the random medium	56
6-4	The Gaussian autocorrelation function as a limiting form	58
6-5	The limiting form for pulse shapes	59
6-6	The ray treatment and intensity fluctuations	60

Chapter		Page
7	**Intensity fluctuations of the wave field (weak scatter)**	61
7-1	Fluctuations produced by an elementary layer of medium or screen	62
7-2	The scintillation index	63
7-3	The intensity autocorrelation function	65
7-4	The extended medium (weak scatter)	66
7-5	Intensity fluctuations and the fourth moment equation	67
8	**Intensity fluctuations of the wave field (multiple scatter)**	69
8-1	The fourth moment equation	70
8-2	The parameter $\gamma = k\beta r_0^2$	72
8-3	Solving the fourth moment equation	73
8-4	Scale size of the intensity scintillations	75
8-5	Scaling the distance in the medium	76
9	**The probability density of the wave field**	79
9-1	The γ, Z plane	80
9-2	Some samples of the intensity fluctuations	85
9-3	The classification of practical situations	87
10	**Incident wave fields which are incoherent**	89
10-1	An incident wave field which is spatially incoherent	90
10-2	Modification of the moment equations when the incident field is spatially incoherent	92
10-3	The scintillation index when the incident field is spatially incoherent	95
10-4	The scintillation index when the field has a Gaussian probability distribution	96
10-5	An incident wave field which is time incoherent	99
10-6	The scintillation index when the incident field is time incoherent	99
11	**When the source and the medium are in motion**	105
11-1	Spaced station observations, and the intensity correlation function	106
11-2	Correlation function for a moving source immersed in a moving medium	108
11-3	When both the medium and source move	111

Chapter *Page*

Appendix A Solution of the differential equation for $\langle E_1 E_2^* \rangle$ 115

Appendix B Solution of Eq. (5-20) by the method of successive scatters 117

Appendix C Pulse shape in the case of single scattering 121

Appendix D The probability densities encountered in the multiple scattering of photons 123

Appendix E Solution of the limiting form of the equation for the frequency correlation function 127

Appendix F The scintillation index and intensity autocorrelation function for weak scattering 131

Appendix G Change of variables in the fourth moment equation 135

Appendix H Intensity fluctuations in the region where $\gamma \gg 1$ 137

Appendix I The scintillation index for an extended source 147

Index 151
