

CONTENTS

PREFACE	xiii
CHAPTER 1	
A BRIEF HISTORY OF SUPERCONDUCTIVITY	1
Early Investigations of Metallic Resistivity / 1	
Heike Kamerlingh Onnes / 2	
H-Field Expulsion; Two-Fluid Model / 7	
Émigré Scientists / 7	
The London Brothers / 8	
Pippard; Nonlocal Effects / 9	
BCS Theory: The Great Enlightenment / 11	
At Last: Practical High-Field Superconductors / 14	
Ivar Giaever; Single-Electron Tunneling / 15	
Brian Josephson; Pair Tunneling / 18	
Computer Applications / 21	
Perovskite-Related Structures / 22	
High-Temperature Superconductivity; Bednorz and Müller / 22	
Hitting the Jackpot in Alabama / 24	
Bismuth and Thallium Compounds / 30	
High-Temperature Superconductivity without Copper / 33	
Pb-Sr-(RE)-Cu-O: Superconducting Smorgasbord? / 34	
Research: Goals and Support / 35	
The Long View / 36	
References / 37	

CHAPTER 2	
THE PHENOMENA OF SUPERCONDUCTIVITY; FUNDAMENTAL CONSIDERATIONS	41
Introduction / 41	
Zero Resistivity, Meissner Effect / 42	
Two Broad Categories of Superconductors / 45	
Two-Fluid Models / 46	
Characteristic Lengths (λ and ξ) / 51	
Critical Temperature, T_c / 56	
Flux Quantization / 57	
Ginzburg-Landau Wave Function / 59	
Paired Electrons, Isotopic Mass / 61	
Energy Gap, Δ / 62	
Relationship between Transition Temperature (T_c), Debye Temperature (Θ_D), and Energy Gap (Δ) / 62	
Critical Thermodynamic Magnetic Field, H_c / 65	
Critical Current Density, J_c / 67	
AC Losses in Superconductors / 82	
Conductivity; By the Two-Fluid Model / 88	
Electron (Giaever) Tunneling / 90	
Pair Tunneling; The DC Josephson Effect / 91	
The AC Josephson Effect / 93	
Josephson Equations / 93	
Summary / 95	
References / 96	
CHAPTER 3	
HIGH-TEMPERATURE SUPERCONDUCTORS	99
Introduction / 99	
Definitions / 100	
Lanthanum-Barium-Copper Oxide / 100	
La-Sr-Cu-O / 102	
Yttrium-Barium-Copper Oxide and Related Compounds / 103	
Bismuth and Thallium Systems / 128	
Liquid Nitrogen; A Suitable Cryogen? / 133	
High- T_c without Copper / 133	
La_2CuO_4 : Transient Superconductivity? / 134	
Room-Temperature Superconductors: Will-o'-the-Wisp? / 135	
Summary / 137	
References / 138	
CHAPTER 4	
APPLICATIONS OF SUPERCONDUCTORS	148
Introduction / 148	
First Applications for High- T_c materials: Electronics / 150	

SQUIDs and Josephson Magnetometers / 152	
Josephson Tunneling Devices as Switches / 158	
Rationale for Using Josephson Technology in Computers / 160	
Basic Josephson Junction Characteristic / 160	
Logic Gates / 163	
Computer Memory / 167	
The “Parametron”; Parametric Oscillations and Digital Applications / 168	
Low-Energy Analog and <i>rf</i> Applications / 172	
Other Analog and Hybrid Applications / 175	
The HYPRES® Instrumentation / 181	
Cryotrons: For Slow Switching / 184	
High-Energy Applications / 189	
Superconducting Magnets; Design Considerations / 192	
NMR/MRI Superconducting Magnet Applications / 201	
Magnetic Separation / 202	
Magnetic Levitation (MAGLEV) / 202	
Marine Propulsion: Motors and Magnetohydrodynamics / 207	
Utility and Related Applications / 209	
Particle Accelerators / 219	
Antennas, Waveguides / 226	
Detection of Visible Light and Infra-Red / 227	
Magnetic Shielding / 235	
Summary / 240	
References / 242	
CHAPTER 5	
PROCESSING OF HIGH-TEMPERATURE SUPERCONDUCTORS	250
Introduction / 250	
Sample Material Preparation / 250	
Superconducting Films / 254	
Preparation of Single Crystal High- T_c Samples / 264	
Use of Fluorine in 1-2-3 Processing / 266	
Substrates / 267	
Useful Configurations for High- T_c Superconductors / 268	
Bismuth-System Processing / 269	
In Combination with Semiconductors / 275	
Thallium Processing—Proceed with Caution! / 277	
References / 277	
CHAPTER 6	
MEASUREMENTS	283
Introduction / 283	
Temperature Measurement / 283	
Useful Materials for Cryogenic Experiments / 292	
Measurement of Resistivity in Superconductors / 293	

Electrical Contacts / 294
Normal Conductors / 297
Single Crystals; A Special Measurement Problem / 298
Thermal Analysis / 299
Noncontact Characterization of Superconductors / 300
References / 312

CHAPTER 7
SAFETY CONSIDERATIONS **316**

Introduction / 316
Cryogenics / 317
Toxicity of Materials; Thallium / 318
References / 321

APPENDIX A
REVIEW OF BASIC ELECTRICAL AND MAGNETIC THEORY **323**

Introduction / 323
Units / 323
Current Flow and Temperature-Mediated Resistivity / 323
The Magnetic Fields (**B**, **H**, **M**, **A**) / 326
Magnetic Susceptibility, χ / 327
Energy in Static Electric and Magnetic Fields / 329
The Hall Effect / 329
Time-Varying Fields / 331
Loss in Dielectrics; Complex Permittivity / 333
Complex Magnetic Susceptibility / 336
Surface resistance (R_s) and Skin Depth (δ) / 336
Resonant Structures / 338
References / 340

APPENDIX B
UNITS AND CONVERSIONS **342**

Magnetic Fields and Units; A Brief Review / 342
Gaussian and CGS Conventions / 343
Conversion of Expressions from Gaussian to SI Units / 343
Magnetic Parameters and Units / 346
References / 346

APPENDIX C
GLOSSARY OF TERMS AND SYMBOLS **348**

General Constants / 348
Electromagnetism (Standard International Units) / 349
Superconductivity-Related Terms Defined / 350

Mathematical Operations; Vector Notation /	352
Prefixes for Units in the SI System /	353
APPENDIX D	
SUPERCONDUCTOR-RELATED PRODUCTS, SERVICES, PUBLICATIONS, AND ASSOCIATIONS	354
Providers of Goods and Services /	354
General Publications /	370
Technical, Scientific, and Trade Journals /	375
Societies and Associations /	377
APPENDIX E	
TEMPERATURE SCALES; CONVERSIONS	379
APPENDIX F	
PEROVSKITES	381
Origins /	381
Existing Applications /	381
Perovskite Structure /	381
Variations from the Ideal Form /	383
YBa ₂ Cu ₃ O _{7-δ} : An Oxygen-Deficient Perovskite /	384
References /	386
APPENDIX G	
NOVEL SUPERCONDUCTORS	387
“Gapless” Superconductors /	387
F-Electron Systems /	387
References /	388
APPENDIX H	
MISCELLANEOUS FEATURES OF SUPERCONDUCTORS	389
Specific Heat /	389
Thermal Conductivity, Variations below T_c /	391
Thermoelectric Effects /	393
References /	394
LIST OF FIGURES	395
SELECTED BIBLIOGRAPHY	401
INDEX	443
