

## CONTENTS

### THE KINETICS OF NONEQUILIBRIUM ELECTRONS AND PHONONS IN SUPERCONDUCTING TUNNEL JUNCTIONS

A.M. Gulyan, G.F. Zharkov 1

Chapter 1: A General Consideration of Electron Kinetics in a Nonequilibrium Josephson Junction	2
1. Initial Relations	3
2. The Tunnel Source of Nonequilibrium	7
3. Electron-Electron Collisional Integral	11
Chapter 2: Electron-Hole Excitations in Nonequilibrium Superconductor Tunnel Junctions	16
4. Quantum Oscillations in the Nonequilibrium Chemical Potential	16
5. Emission Scattering by a Nonequilibrium Josephson Junction	21
6. The Critical State in a Symmetrical $SiS$ -Junction	27
Chapter 3: Phonon Emission in Nonequilibrium Conditions	32
8. A Description of the Kinetics of Nonequilibrium Electrons and Phonons by Means of the Analytic Continuation Technique	32
9. Phonon Emission Spectrum	36
Chapter 4: The Theory of an Acoustical Quantum Mechanical Oscillator Based on a Nonequilibrium Superconductor	38
10. Population Inversion in Nonequilibrium Superconductors	39
11. Self-Consistent Kinetic Equations	42
12. Asymmetrical $SiS$ -Junction	46
13. The Role of Fluctuations	49
Conclusion	52
Bibliography	52

### EQUILIBRIUM AND NONEQUILIBRIUM PHENOMENA IN INHOMOGENEOUS AND WEAKLY-COUPLED SUPERCONDUCTORS

A.D. Zaikin 57

Introduction

Chapter 1: Phenomena Near the Normal Metal- Superconductor Boundary	63
--	----

1. The Proximity Effect Near the Normal Metal-Superconductor System	63
2. The Meissner Effect and External Magnetic Field Action on the Discrete Spectrum in the <i>NS</i> -System	71
Chapter 2: The Stationary Josephson Effect in Superconductor-Normal Metal-Superconductor Junctions	76
3. The Influence of Order Parameter Suppression on Critical Current in <i>SNS</i> -Junctions	76
4. The Stationary Josephson Effect in Wide <i>SNS</i> -Junctions Containing Impurities	78
5. The Stationary Josephson Effect in <i>SNINS</i> -Junctions	82
Chapter 3: The Nonstationary Josephson Effect and Nonequilibrium Properties of Pure Superconductor-Normal Metal-Superconductor Junctions	92
6. Fundamental Equations and General Relations	92
7. The Nonstationary Josephson Effect in <i>SNINS</i> -Junctions for a Random Voltage	94
8. The Nonstationary and Nonequilibrium Properties of <i>SNS</i> -Bridges	104
Chapter 4: Vortex States in Josephson Junctions	116
9. Vortex Free Energy in the Presence of Current	117
10. The Spectrum of Oscillations in a Josephson Junction System	120
Conclusion	123
Appendix 1	125
Appendix 2	127
Bibliography	129

## A NONQUASICLASSICAL DESCRIPTION OF INHOMOGENEOUS SUPERCONDUCTORS

A.D. Zaikin, S.V. Panyukov 137

1. Derivation of the Equations for the Green's Functions	139
2. Factorization of the Green's Functions of a Superconductor	143
3. The Quasi-Classical Limit	145
4. Generalization of the Equations to the Nonstationary Case	147
5. Boundary Conditions for the $\mu$ -, $\nu$ -Functions	149
Conclusion	150
Bibliography	150

## QUANTUM TUNNELING WITH DISSIPATION

A.D. Zaikin, S.V. Panyukov

Introduction	153
1. Calculation of the Exponent	155
2. The Preexponential Factor	156
Conclusion	159
Bibliography	160

## THE NONEQUILIBRIUM PROPERTIES OF SUPERCONDUCTORS UNDER OPTICAL EXCITATION AND CURRENT TUNNEL INJECTION

K.V. Mitsen 161

Introduction	161
Chapter 1: The Nonequilibrium Properties of Superconductors Under Low-Intensity Optical Pumping	163
1. Experimental Methodology	163
2. Investigation of the Quasi-Particle Distribution Function for the Case of Optical Pumping	165
3. Measurements of the Dependence of the Energy Gap on Optical Pumping Intensity	167
4. Determining Quasi-Particle Recombination Time	170
Chapter 2: The Spatially Inhomogeneous State in Superconductors Under Optical Excitation	171
1. Experimental Technique	171
2. Experimental Results from an Investigation of the Properties of Superconductors Under High-Level Optical Pumping	173
3. Discussion of Results. Comparison to Theory	179
4. The Kinetic Aspect of Spatially-Inhomogeneous State Formation	185
Chapter 3: Current Injection in Superconductors	187
1. The Spatially-Inhomogeneous State with Tunnel Injection in Films	187
2. Enhancement of Superconductivity with Quasi- Particle Tunneling	190
Bibliography	197

**KINETIC THEORY OF NONEQUILIBRIUM PROCESSES  
IN SUPERCONDUCTORS**

V.G. Valeev, G.F. Zharkov, Yu.A. Kukharenko 203

Introduction 203

Chapter 1: Kinetic Equations for Superconductors  
with Collision Integrals Preserving  
Particle Number 208

1. Derivation of the Kinetic Equation 209

2. Collision Integrals and Relaxation Frequencies 214

Chapter 2: The Hydrodynamics of a Nonideal Super-  
conducting Fluid. First and Second  
Sound Damping 224

1. Conservation Laws 225

2. Hydrodynamic Equations of an Ideal Super-  
conducting Fluid 228

3. Application of the Chapman-Enskog Method to  
Solving the Kinetic Equation for the Density  
Matrix of a Superconductor 230

4. First and Second Sound Damping 239

Chapter 3: The Collisional Relaxation of the Order  
Parameter Modulus, and the Relaxation,  
Diffusion and Fluctuations of the Branch  
Imbalance of the Spectrum of Excitations  
and Nonequilibrium Spin Density in Super-  
conductors 240

1. Generalized Chapman-Enskog Method 241

2. Tunnel Electron Source 245

3. Kinetic Coefficients Accounting for Retardation  
Effects 246

4. Collisional Relaxation of the Order Parameter  
Modulus 250

5. The Relaxation of the Population Imbalance of  
the Excitation Spectrum of a Superconductor  
and the Possibilities for its Experimental  
Investigation 252

6. Thermoelectric Effects in Superconductors 256

7. Fluctuations in the Branch Imbalance of the  
Excitation Spectrum of a Superconductor.  
Josephson Radiation Linewidth 265

8. Diffusion and Convective Transport of Spin  
Density in the Current State of a Superconductor  
with Nonequilibrium-Oriented Spins 268

Bibliography 273

**SUBJECT INDEX 283**
