Contents

1. Introduction 1

2. Exchange Enhancement Effect During Phase Transitions in Magnetically Ordered Crystals 16
2.1 Phase Transition in a Ferromagnet with Quadrupole Interaction .. 16
2.2 Phase Transition in an Antiferromagnet in a Strong Magnetic Field 24
2.3 Fluctuations and Spin Waves in Ferroelectro-antiferromagnets in a Strong Magnetic Field 35
2.4 Phase Transition in a Crystal with Dislocations in a Strong Magnetic Field 38

3. Phase Lamination and the Exchange Enhancement Effect 45
3.1 Phase Transitions in Complex Magnetic Structures and the Exchange Enhancement Effect in Spin-Orbit Interaction 45
3.2 Phase Diagrams of Complex Magnetic Structures: Phase Lamination 62
3.3 Phase Transitions in Ferroelectro-antiferromagnets 70

4. Superconducting Phases in Rare-Earth Metal Compounds: Phenomenological Theory 75
4.1 Superconducting Compounds of Rare-Earth Metals: Formulation of the Problem 75
4.2 Fluctuation Free Energy: Renormalization Group Equations 81
4.3 Phase Diagram of the Superconducting Compounds of Rare-Earth Metals 84
4.4 Topological Analysis of the Phase Diagram of Superconducting Compounds of Rare-Earth Metals 94

5. Theory of High-Temperature Superconducting Phases in Rare-Earth Metal Compounds 100
5.1 Lagrangian of the System near the Point of Phase Transition to Superconducting State 100

5.2 Electron-Phonon Interaction Parameter for the High-Temperature Superconducting Phase 106

6. Solitons in the Theory of Superconductivity of Magnetic Systems .. 112
6.1 Generalized Order Parameter in Magnetic Superconductors: Equations for the Superconducting Phase 112
6.2 Soliton Mechanism for Emergence of Superconductivity Accompanying a Phase Transition from Superconducting to Paramagnetic States 116
6.3 Solitons in an Inhomogeneous Superconducting State and Topology 119
6.4 Solitons in the Phase of Coexistence of Superconductivity and Magnetism 127

7. Spin Glasses Based on Rare-Earth Metal Compounds 133
7.1 Phase Transitions in Heavy Rare-Earth Metals 133
7.2 Modern Spin Glass Models 140
7.3 Peculiarities of Vector Fields in Heavy Rare-Earth Metals 146
7.4 Magnetic Susceptibility in the New Spin Glasses 155
7.5 Superconducting Phases in Spin Glasses 161
7.6 Peculiarities of Spin-Wave Dynamics in Spin Glasses 165

8. High-Temperature Superconducting Ceramics 169
8.1 High-Temperature Superconducting Oxides 169
8.2 Spectrum of Quasi-Particles Exchanged by Electrons in HTS Ceramics 172
8.3 Possibility of Increasing the Critical Temperature: Properties of High-Temperature Superconductors 179

9. Theory of High-Temperature Superconductivity of Ceramic Systems 190
9.1 Microscopic Equations for the Superconducting Phase 190
9.2 Separation of Many-Particle Averages in the Superconducting Phase Equations: Wick's Theorem 197
9.3 Electron-Phonon Interaction in Superconducting Phases: Superconducting Transition Temperature 208
9.4 Phase Lamination in Superconducting States 217
9.5 Microscopic Equations near the Phase Transition Point: Relation to the Phenomenological Theory 222

10. Theory of High-Temperature Superconductivity of Polymer Systems 234
10.1 Quasi-One-Dimensional Organic Superconductors: Polyacetylene as a Possible Superconductor 234

10.2 Criterion for the Emergence of Superconductivity in Polyacetylene 241
10.3 High-Frequency Properties of Polyacetylene in the Nonsuperconducting State 245
