CONTENTS

1 GENERAL PROPERTIES OF MANY-PARTICLE SYSTEMS AT LOW TEMPERATURES, Page 1.

1. Elementary Excitations. The Energy Spectrum and Properties of Liquid He⁴ at Low Temperatures, 1.

1.1: Introduction. Quasi-particles, 1. 1.2: The spectrum of a Bose liquid, 6. 1.3: Superfluidity, 11.

- The Fermi Liquid, 15.
 2.1: Excitations in a Fermi liquid, 15.
 2.2: The energy of the quasi-particles, 18.
 2.3: Sound, 23.
- 3. Second Quantization, 28.
- 4. The Dilute Bose Gas, 31.
- 5. The Dilute Fermi Gas, 36.

2 METHODS OF QUANTUM FIELD THEORY FOR T = 0, Page 43.

- 6. The Interaction Representation, 43.
- 7. The Green's Function, 51.

7.1: Definition. Free-particle Green's functions, 51. 7.2: Analytic properties, 55. 7.3: The physical meaning of the poles, 59. 7.4: The Green's function of a system in an external field, 63.

8. Basic Principles of the Diagram Technique, 64.

8.1: Transformation from the variable N to the variable μ , 64. 8.2: Wick's theorem, 66. 8.3: Feynman diagrams, 68.

9. Rules for Constructing Diagrams for Interactions of Various Types, 71.

9.1: The diagram technique in coordinate space. Examples, 71. 9.2: The diagram technique in momentum space. Examples, 80.

XII CONTENTS

2 METHODS OF QUANTUM FIELD THEORY FOR T = 0 (Continued).

10. Dyson's Equation. The Vertex Part. Many-Particle Green's Functions, 85.

10.1: Sums of diagrams. Dyson's equation, 85. 10.2: Vertex parts. Many-particle Green's functions, 89. 10.3: The ground-state energy, 95.

3 THE DIAGRAM TECHNIQUE FOR $T \neq 0$, Page 97.

- Temperature Green's Functions, 97.
 General properties, 97.
 Temperature Green's functions for free particles, 102.
- 12. Perturbation Theory, 103.
 12.1: The interaction representation, 103. 12.2: Wick's theorem, 106.

13. The Diagram Technique in Coordinate Space. Examples, 111.

14. The Diagram Technique in Momentum Space, 120.14.1: Transformation to momentum space, 120.14.2: Examples, 123.

15. The Perturbation Series for the Thermodynamic Potential Ω , 130.

16. Dyson's Equation. Many-Particle Green's Functions, 135.

16.1: Dyson's equation, 135. 16.2: Relation between the Green's functions and the thermodynamic potential Ω , 139.

17. Time-Dependent Green's Functions for $T \neq 0$. Analytic Properties of the Green's Functions, 144.

4 THEORY OF THE FERMI LIQUID, Page 154.

18. Properties of the Vertex Part for Small Momentum Transfer. Zero Sound, 154.

19. Effective Mass. Relation Between the Fermi Momentum and the Particle Number. Excitations of the Bose Type. Heat Capacity, 160.

19.1: Some useful relations, 160. 19.2: Basic relations of the theory of the Fermi liquid, 162. 19.3: Excitations of the Bose type, 165. 19.4: Another derivation of the relation between the Fermi momentum and the particle number, 166. 19.5: Heat capacity, 169.

▲ THEORY OF THE FERMI LIQUID (Continued).

20. Singularities of the Vertex Part When the Total Momentum of the Colliding Particles is Small, 172.

- Electron-Phonon Interactions, 176.
 21.1: The vertex part, 176. 21.1: The phonon Green's function, 178. 21.3: The electron Green's function, 182. 21.4: Correction to the linear term in the electronic heat capacity, 188.
- 22. Some Properties of a Degenerate Plasma, 189.
 22.1: Statement of the problem, 189. 22.2: The vertex part for small momentum transfer, 191. 22.3: The electron spectrum, 195. 22.4: Thermodynamic functions, 200.

5 SYSTEMS OF INTERACTING BOSONS, Page 204.

23. Application of Field Theory Methods to a System of Interacting Bosons for T = 0, 204.

24. The Green's Functions, 213.

24.1: Structure of the equations, 213. 24.2: Analytic properties of the Green's functions, 217. 24.3: Behavior of the Green's functions for small momenta, 221.

25. The Dilute Nonideal Bose Gas, 222.

25.1: The diagram technique, 222. 25.2: Relation between the chemical potential and the self-energy parts of the one-particle Green's functions, 224. 25.3: The low-density approximation, 228. 25.4: The effective interaction potential, 231. 25.5: The Green's function of a Bose gas in the low-density approximation. The spectrum, 234.

26. Properties of the Spectrum of One-Particle Excitations Near the Cutoff Point, 235.

26.1: Statement of the problem, 235. 26.2: The basic system of equations, 237. 26.3: Properties of the spectrum near the threshold for phonon creation, 240. 26.4: Properties of the spectrum near the threshold for decay into two excitations with parallel nonzero momenta, 243. 26.5: Decay into two excitations emitted at an angle with each other, 245.

27. Application of Field Theory Methods to a System of Interacting Bosons for $T \neq 0$, 247.

6 ELECTROMAGNETIC RADIATION IN AN ABSORBING MEDIUM, Page 252.

28. The Green's Functions of Radiation in an Absorbing Medium, 252.

29. Calculation of the Dielectric Constant, 259.

30. Van der Waals Forces in an Inhomogeneous Dielectric, 263.

31. Molecular Interaction Forces, 268.

31.1: Interaction forces between solid bodies, 268. 31.2: Interaction forces between molecules in a solution, 275. 31.3: A thin liquid film on the surface of a solid body, 277.

7 THEORY OF SUPERCONDUCTIVITY, Page 280.

32. Background Information. Choice of a Model, 280.

32.1: The phenomenon of superconductivity, 280. 32.2: The model. The interaction Hamiltonian, 282.

33. The Cooper Phenomenon. Instability of the Ground State of a System of Noninteracting Fermions With Respect to Arbitrarily Weak Attraction Between the Particles, 284.

33.1: The equation for the vertex part, 284. 33.2: Properties of the vertex part, 287. 33.3: Determination of the critical temperature, 289.

34. The Basic System of Equations for a Superconductor, 291.

34.1: A superconductor at absolute zero, 291. 34.2: The equations in the presence of an external electromagnetic field. Gauge invariance, 296. 34.3: A superconductor at finite temperatures, 297.

35. Derivation of the Equations of the Theory of Superconductivity in the Phonon Model, 299.

36. The Thermodynamics of Superconductors, 303.

36.1: Temperature dependence of the energy gap, 303. 36.2: Heat capacity, 304. 36.3: The critical magnetic field, 306.

37. A Superconductor in a Weak Electromagnetic Field, 308.

37.1: A weak constant magnetic field, 308. 37.2: A superconductor in an alternating field, 315.

38. Properties of a Superconductor in an Arbitrary Magnetic Field Near the Critical Temperature, 320.

7 THEORY OF SUPERCONDUCTIVITY (Continued).

Theory of Superconducting Alloys, 325.
 39.1: Statement of the problem, 325.
 39.2: The residual resistance of a normal metal, 327.
 39.3: Electromagnetic properties of superconducting alloys, 334.
