

CONTENTS

1. BASIC THERMODYNAMIC CONCEPTS AND LAWS	1
Definitions, 1	
Closed Systems, 2	
Open Systems, 7	
The Momentum Theorem, 14	
Useful Steps in Problem Solving, 15	
Symbols, 16	
Selected Readings, 16	
Problems, 17	
2. ENTROPY GENERATION AND LOST AVAILABLE WORK	21
The Gouy–Stodola Theorem, 21	
Systems Communicating with More Than One Heat Reservoir, 24	
Adiabatic Systems, 28	
Availability (Exergy) Analysis of Steady Flow Processes, 29	
Availability vs. Exergy: A Historical Perspective, 32	
Steady Flow vs. Nonflow Availability and Exergy, 33	
Characteristic Features of Irreversible Systems and Processes, 35	
Symbols, 42	
References, 42	
Problems, 44	
3. VISCOUS DISSIPATION IN FLUID FLOW	48
Relationship between Entropy Generation and Viscous Dissipation, 48	

The Laminar Regime, 50
 The Turbulent Regime, 52
 The Transition, 59
 The Viscid–Inviscid Transition, 61
 Symbols, 62
 References, 63

4. THEORY OF TURBULENT FLOW

64

Empiricism vs. Theory in Turbulence Research, 65
 The Sinuous Course of High Reynolds Number Streams, 67
 The Buckling Property of Inviscid Streams, 70
 Mechanism of Eddy Formation and Jet Growth, 74
 Transition to Turbulence: The Buckling Number, 77
 Buckled Wakes: The Origin of “Vortex Shedding”, 79
 The Fibrous Structure of the Inviscid Flow, 80
 The Rolling of Buckled Shear Layers, 82
 Transition to Turbulence in Shear Flow: The Smallest Eddy, 85
 Periodic Bursting of Wall Shear Layers, 87
 Laboratory Visualization of the Buckling Property, 90
 Symbols, 94
 References, 95

5. CONVECTIVE HEAT TRANSFER

98

Local Rate of Entropy Generation, 99
 Fluid Friction vs. Heat Transfer Irreversibility, 102
 Internal Flows, 105
 External Flows, 109
 Symbols, 114
 References, 115
 Problems, 116

6. HEAT TRANSFER AUGMENTATION TECHNIQUES

118

Entropy Generation Analysis, 119
 Roughened Surfaces, 120
 Promoters of Swirl Flow, 125
 Extended Surfaces (Fins), 127
 Symbols, 132
 References, 134

7. HEAT EXCHANGERS	135
Counterflow Heat Exchangers, 135	
Balanced Counterflow, 138	
Optimum Flow Path Length, 141	
Irreversibility Minimization Subject to Constraints, 142	
Distribution of Heat Exchanger Area on the Absolute Temperature Scale, 145	
Distribution of Heat Transfer Area in Counterflow Heat Exchangers, 151	
Symbols, 153	
References, 154	
Problems, 155	
8. THERMAL ENERGY STORAGE	158
Transient Operation of Storage Elements, 158	
Destruction of Exergy during Energy Storage, 160	
Series of Storage Units, 165	
Optimum Flow Rate History, 166	
Energy Storage vs. Refrigeration Storage, 169	
Symbols, 171	
References, 171	
9. THERMAL INSULATION SYSTEMS	173
Irreversibility of Insulation with Fixed Geometry, 174	
Optimum Continuous Cooling Regime, 177	
Counterflow Heat Exchangers As One-Dimensional Insulations, 180	
Parallel Insulations, 182	
Symbols, 186	
References, 186	
Problems, 186	
10. LOW TEMPERATURE APPLICATIONS	188
Mechanical Supports, 188	
Insulations Cooled with Helium Boil-off, 192	
Radiation Shields, 197	
Electric Cables, 199	
Helium Refrigeration Cycles, 201	

Symbols, 203	
References, 204	
11. SOLAR ENERGY	206
The Exergy Content of Thermal Radiation, 206	
The Exergy of Sunlight, 209	
Exergy Waste in Solar Collectors, 211	
Isothermal Collectors, 214	
Nonisothermal Collectors, 216	
Time-varying Conditions, 220	
Operation at Constant Collector Temperature, 224	
Symbols, 227	
References, 228	
Problems, 229	
12. ENERGY POLICY by Mary Bejan	231
The Application of Entropy Generation Minimization Principles, 231	
End-Use Matching: The Demand-side View, 232	
Policy Implications of Incorporating a Supply-side Perspective, 233	
Solar Exergy: A High Temperature Fuel, 237	
The Effect of User Density on the Ability to Extract Exergy, 238	
Conclusion, 239	
References, 240	
APPENDIX A. LOCAL ENTROPY GENERATION RATE	241
APPENDIX B. VARIATIONAL CALCULUS	243
INDEX	245
