

## TABLE OF CONTENTS

### Part One

#### Quasi-averages in Problems of Statistical Mechanics

##### SECTION 1. QUASI-AVERAGES

1. Green's Functions, Defined with Regular Averages	1
2. Degeneracy of the Statistical Equilibrium States; Introduction of Quasi-averages	5
3. Principle of Correlation Weakening	30
4. Particle Pair States	34
5. Certain Inequalities	41

##### SECTION 2. CHARACTERISTIC THEOREMS ABOUT THE $1/q^2$ TYPE INTERACTION IN THE THEORY OF SUPERCONDUCTIVITY OF BOSE AND FERMI SYSTEMS

6. Symmetry Properties of Basic Green's Functions for Bose Systems in the Presence of a Condensate	45
7. Model with a Condensate	50
8. The $1/q^2$ Theorem and its Application	58
9. The $1/q^2$ Theorem for Fermi Systems	68

### Part Two

#### On the Model Hamiltonian of Superconductivity

1. Statement of the Problem	76
2. General Properties of the Hamiltonian	79
3. Upper Bound for the Minimum Eigenvalue of the Hamiltonian	83
4. Lower Bound for the Minimum Eigenvalue of the Hamiltonian	87
5. Green's Functions (Case $\nu > 0$ )	98
6. Green's Functions (Case $\nu = 0$ )	112
Appendix A	130
Appendix B—The Principle of Extinction of Correlations	138

## Part Three

**Hydrodynamics of a Superfluid Liquid**

Introduction	148
1. Preliminary Identities	149
2. Hydrodynamic Equations for a Normal Liquid	156
3. Hydrodynamic Equations for a Superfluid	164
4. Variational Equations and Green's Functions	180

## Part Four

**Compensation Principle and Self-consistent Field Method**

1. Compensation Principle	190
2. Self-consistent Field Method	199
3. Representation with a Fixed Number of Particles	204
4. Collective Oscillations	209
5. Problems of the Electrodynamics of the Superconducting State	226
